Foreword

The Institute of Leather Engineering and Technology (ILET), University of Dhaka offers B.Sc. Engineering (Leather Engineering, Footwear Engineering and Leather Products Engineering) and M.Sc. Engineering (Leather Engineering, Footwear Engineering and Leather Products Engineering) degrees under certain rules and guidelines. These Rules and Guidelines of the Institute of Leather Engineering and Technology have been approved by the academic committee, Board of Governors (BoG) meeting, and finally have been approved by the Academic Council of the University of Dhaka. I wish that respective faculty members as well as students will be benefited from this handbook.

Finally, I would like to express my sincerest gratitude and thanks to my esteemed colleagues, BoG members, industry personnel for their support and cooperation in successful compilation of this handbook.

Professor Dr. Mohammed Mizanur Rahman
Director
Institute of Leather Engineering and Technology
University of Dhaka, Dhaka-1209, Bangladesh

1. About the Institute

The Institute of Leather Engineering and Technology (ILET), University of Dhaka was established on 20 June 2011 by merger and integration of the erstwhile “Bangladesh College of Leather Technology” of the Directorate of Technical Education, the ministry of education, the government of Bangladesh with the University of Dhaka with all its assets, funds, rights, interests, properties, etc. and all its employees. Now, the Institute of Leather Engineering and Technology is functioning as an integral part institution of the University of Dhaka and affiliated with Faculty of Engineering and Technology.

This institute has a glorious history which was officially inaugurated on 15 August 1947, just after the end of British rule, by the Ministry of Industry with the name of “East Bengal Tanning Institute” for the development of the tanning industry. The institute started its journey on 10 June 1949 and academic activities were commenced from the year 1952 after the provision of infrastructure. Later, the name of the institute was substituted with “Pakistan Leather Technology”. In 1967, the institute was transferred to the Ministry of Education and supervised under the administrative control of the technical education board to disseminate better academic and educational facilities. After liberation, the institute was renamed as the “Bangladesh College of Leather Technology” and was providing diploma, certificate, and artisan level education on leather technology until 1979. Then the government of Bangladesh started a graduate course in B.Sc. Engineering in Leather Technology under the University of Dhaka from the 1979-1980 academic session. Later, on 20 June 2011, the “Bangladesh College of Leather Technology” was handed over to the University of Dhaka with its resource and manpower and started as a distinct institute of the University of Dhaka.

Under the University of Dhaka, the institute has been commenced its journey with the following objectives–

- (a) to produce qualified manpower and skills in the field of tannery, footwear and leather goods sector.
- (b) to provide quality education leading to Bachelor of Science (B. Sc.), Master of Science (M.Sc.), Master of Philosophy (M.Phil), Doctor of Philosophy (Ph.D.) and Diploma degrees in the Leather Engineering and Technology and related field;
- (c) to initiate, organize and undertake research in the field of Leather Engineering and Technology;
- (d) to provide in-plant and industry-oriented short- and long-term training programs on various fields of leather, footwear, and leather products;
- (e) to provide quality control and laboratory facilities for testing raw materials, consumable, and finished goods;

- (f) to organize seminars, conferences, workshops, exhibitions and other events to disseminate knowledge about cutting-edge technology for raw hides/skins processing and the development of footwear and leather product;
- (g) to provide consultancy and advisory services to institutions, NGOs, private and public sector corporations, who seek such assistance;
- (h) to establish link-programs and research collaborations with various institutions/ organizations within the country and abroad.

Administration and Management of ILET

The ILET is run by the seventeenth statutes under President's order of 1973 and its budget is a part of the university budget. The Vice-Chancellor is the chief executive of the Institute. The Director is the administrative head of the Institute. Administration and Management of the Institute is vested in the following bodies, subject to the approval of their actions by the Syndicate and or Academic Council of the University, as the case may be:

- a. The Board of Governors (BoG), of which the Vice-Chancellor is the Chairman;
- b. The Selection Board for Professorships and Associate Professorships of which the Vice-Chancellor is the Chairman;
- c. The Selection Board for teaching Posts other than Professorships and Associate Professorships of which the Pro-Vice-Chancellor (Academic) is the Chairman;
- d. The Selection Board for appointments to non-teaching posts not below the rank of Section Officers of which the Pro-Vice-Chancellor (Administration) is the Chairman;
- e. The Selection Board below the rank of Section Officer of which the Director is the Chairman
- f. The Coordination and Development (C&D) Committee, of which the Director is the Chairman;
- g. The Academic Committee, of which the Director is the Chairman.

At present, the programs are offered by the Institute are as follows with the latest curriculum based on the need of modern tanneries and leather products industries:

- 1. B.Sc. Engineering in Leather Engineering (4 years; 8 semesters)
- 2. B.Sc. Engineering in Footwear Engineering (4 years; 8 semesters)
- 3. B.Sc. Engineering in Leather Products Engineering (4 years; 8 semesters)
- 4. M.Sc. Engineering in Leather Engineering (1.5 years; 3 semesters)
- 5. M.Sc. Engineering in Footwear Engineering (1.5 years; 3 semesters)
- 6. M.Sc. Engineering in Leather Products Engineering (1.5 years; 3 semesters)

ILET aims at creating efficient human resources in the fields of the leather industry, the leather products industry, and the footwear industry. The institute provides its undergraduate students with the opportunity to participate in industrial training where students are attached

to different companies and they relate theories, concepts and techniques learned from the academic courses with real-life experiences. At the end of the final year, our graduate students are involved in project work, report writing, and presentation. The master's students involve in research and writing up a thesis vigorously. We are committed to providing our students, the very best education, and training opportunities designed to enable each and every student to make the best use of their potentials and achieve their ambitions.

ILET has an interdisciplinary team of faculty members having a strong research background. The faculty members have expertise in tannery effluent treatment, leather processing technologies, materials science, environmental chemistry, medicinal chemistry, organometallic chemistry, analytical chemistry and synthetic organic chemistry, nanotechnology for leather engineering, cleaner technologies, product design and development, circular economy, sustainability, supply chain risk management, industry 4.0, and foot comfort. We also conduct outreach activities to disseminate the industrial-scale solutions beyond the University of Dhaka. We provide the expertise needed for pre- and post-implementation assessment of projects, programs, and policies regarding the Leather industry, the Leather products industry, and the Footwear industry.

2. Undergraduate Degrees Offered by the Institute

- a) B.Sc. Engineering in Leather Engineering
- b) B.Sc. Engineering in Footwear Engineering
- c) B.Sc. Engineering in Leather Products Engineering

3. Graduate Degrees Offered by the Institute

- a) M.Sc. Engineering in Leather Engineering
- b) M.Sc. Engineering in Footwear Engineering
- c) M.Sc. Engineering in Leather Products Engineering

4. Course Credit Summary (a) For B.Sc. Engineering Degree

Summary (B.Sc. Engineering in Footwear Engineering)					
Sl.	Course Type		Credit		
			Theory	Lab	Total
1.	Basic Sciences	Mathematics	12	-	37.5
		Physics	3	1.5	
		Chemistry	15	6.0	
2.	Allied Engineering	Materials Science and Engg. (3)/ Mechanical Engineering (4.5)/ EEE (3)/ CSE (4.5)/ Engineering Drawing (1.5)	12	4.5	16.5
3.	Humanities	Employability Skills (3), Sociology (3)	3	3	6.0
4.	Business Studies	Supply Chain Management for Leather and Leather Products (3), Total Quality Management (TQM) for Leather and Leather Products (3), Cost and Management Accounting (3)	9	-	9.0
5.	Common Courses	Polymer Science and Engineering (4.5)/ Environmental Science & Engineering (4.5)/	6	3.0	9.0
6.	Core Courses	Core Subjects of FE	54	23.0	88.0
		Project (3)/ Internship (3)/ Viva (2)/ Field Tour (3)	-	11.0	
7.	Grand Total		114	52	166.0

(b) For M.Sc. Engineering Degree

SL. No.	Title	Credit
		M.Sc. Engg.
1	Total Credits	36
2	Credits for theory courses	21
3	Credits for thesis	15

5. Major Research Areas

Tannery Effluent Treatment, Leather Processing Technologies, Materials Science, Environmental Chemistry, Medicinal Chemistry, Organometallic Chemistry, Analytical Chemistry and Synthetic Organic Chemistry, Nanotechnology for Footwear Engineering, Cleaner Technologies, Product Design and Development, Circular Economy, Sustainability, Supply Chain Risk Management, Industry 4.0, Foot Comfort etc.

6. Rules and Guidelines for B.Sc. Engineering in Footwear Engineering

The rules and guidelines of the B.Sc. Engineering in Footwear Engineering have been approved by the Academic Committee meeting dated 29th October 2020, BoG meeting dated 11th November 2020 and finally have been approved by the Academic Council dated 10th December 2020. It will be applicable from Session 2020-2021 and onward.

6.1 The B.Sc. Engineering in Footwear Engineering

The B.Sc. Engineering in Footwear Engineering program in the Institute of Footwear Engineering and Technology, University of Dhaka is a four academic year program. The program comprises eight semesters, each having duration of six academic calendar months to be distributed as follows:

- (a) **Classes** : Fifteen active weeks
- (b) **Preparatory Leave** : Maximum two weeks
- (c) **Semester Final Exam** : Two-three weeks
- (d) **Vacation** : Only the usual vacation of Dhaka University's will be applicable
- (e) **Result publication** : Within two months from the last Date of theory exam is desirable

6.2 Admission

Students will be admitted to the institute as per Dhaka University rules. Each year application requirements will be defined by the Central Admission Committee of the University of Dhaka. Institute can define specific requirements of subject-wise score in admission test with the approval of the Central Admission Committee.

6.3 Definition of Credit

- (i) For theoretical courses fifteen class-hour of fifty minutes each is defined as one credit.
- (ii) For practical or lab courses thirty lab hours work is defined as one credit.

6.4 Credit Requirements for the B.Sc. Engineering Program

- i. Total credits : 166
- ii. Credits for core courses (theory) : 54
- iii. Credits for practical courses : 41
- iv. Credits for basic sciences (mathematics, statistics, physics & chemistry) (theory) : 30
- v. Credit for allied engineering and other common courses (theory) : 18

- vi. Credits for general education (theory) : 12
- vii. Credits for project : 3
- viii. Credits for internship & field tour : 6
- ix. Credit for course viva : 2

6.5 Grades and Grade Points

The University Grants Commission (UGC) of Bangladesh approved grading system applies to calculate grade and grade points. Grades and grade points will be awarded on the basis of marks obtained in the written, oral and practical Exam according to the following table

Marks	Letter Grade	Grade Point
80% and Above	A+	4.00
75% to < 80%	A	3.75
70% to < 75%	A-	3.50
65% to < 70%	B+	3.25
60% to < 65%	B	3.00
55% to < 60%	B-	2.75
50% to < 55%	C+	2.50
45% to < 50%	C	2.25
40% to < 45%	D	2.00
Less Than 40%	F	0.00
	I	Incomplete
	W	Withdrawn

- (a) Only “D” or higher grade will be counted as credits earned by a student.
- (b) A student obtaining “F” grade in any course will not be awarded degree.
- (c) CGPA (Cumulative Grade Point Average) is the weighted average of the grade points obtained by a student in all the courses. CGPA will be calculated according to the following formula:

$$CGPA = \frac{\sum(\text{grade points in a course} \times \text{credits for the course})}{\text{total credits taken}}$$

- (d) In the tabulation process, only the total marks of a student in any course will be rounded-up to next number and the published result of the program will show only the grades earned and the Cumulative Grade Point Average (CGPA) at the end of each semester.

6.6 Marks Distribution for a Course:

- (a) Theory Course
 - (i) Attendance : 10%

(ii) In-course exam	30%
(iii) Final exam	60%
Total Marks	100%
(b) Lab Course	
(i) Lab attendance	: 20%
(ii) Continuous evaluation	: 40%
(iii) Final exam	: 40%
Total Marks	100%
(c) Project	
(i). Defense	: 40%
(ii) Project Report	: 60%
Total Marks	100%

(d) Guideline for Attendance Mark

Attendance (%)	Marks (10)
90 and above	10
85 to 89	08
80 to 84	06
75 to 79	04
60 to 74	02
Less than 60	00

6.7 Exam Committee Formation

- At the beginning of each academic semester/session, an exam committee shall be formed for that semester/session by the academic committee of the institute. Chairman of the exam committee will act as a course coordinator for that semester/session. The role of a course coordinator is to monitor the academic activities and report to the director of the institute to avoid any unexpected situation.
- The exam committee will consist of four members proposed by the academic committee of the respective program.
- The committee members are a chairman, two internal members from the institute and one external member outside of the institute.
- The exam committee will be responsible for all exam related activities as per

University rules.

6.8 Evaluation of the Courses

The performance of a student in a course will be evaluated in the following ways:

- For a theory course the evaluation will be made on the basis of attendance, quiz/assignment/presentation, in-course exam and final exam.
- For any courses attendance, quiz/assignment/presentation, in- course exam will be evaluated by the course teacher/s and the result must be submitted to the exam committee and controller of exam before commencement to the semester final examination.
- The percentage of attendance of students for each course (according to the format supplied by the Director) along with the attendance sheet must be submitted to the Director of the institute before commence to the semester final examination.
- The in-course exam scripts must be shown to students before the last class of a semester.
- If more than one in-course exam is taken final mark will be calculated by averaging all of them (**best one will not be allowed**).
- For theory course final exams, generally there will be two examiners: course teacher will be the first examiner and the second examiner will be within the institute or from a relevant department of the University of Dhaka. If a suitable examiner is not found from the University of Dhaka, a second examiner may be appointed from other universities with prior permission from the Vice Chancellor.
- The answer scripts of final exam will be evaluated by two examiners and the average mark will be considered as the mark obtained, if the difference of two examiner marks not exceeded 20%.
 - In case of a difference of marks between the two examiners is more than 20% then the script will be evaluated by a third examiner. Marks of nearest two examiners will be taken for average.
 - If the differences of marks of third examiner from the first and second examiner become equal then average of three examiners marks will be obtained mark.
- The assessment of laboratory /practical / field course will be made by observing overall performance of a student during practical (continuous

evaluation), attendance, viva-voce, assignments and evaluation of lab final exam (set by the Institute).

- (i) For fourth year project evaluation will be made on the basis of presentation on project defense and project report.
- (j) For field study evaluation will be made on the basis of written examination or presentation on that field study and field study report.

6.9 Requirements to Sit for Course Final Exam

- (i) Students having 75% or more attendance on average is eligible to appear in the semester final Exam.
- (ii) Student having average 60-74% attendance will be allowed to sit for the exam with a fine Tk. 1000.00 (one thousand) in the University central account. In addition to usual fees, institute may include additional fine as per the decision of the Academic Committee.
- (iii) Student having average attendance below 60% will not be allowed to sit for the semester final Exam but may seek re-admission in the program
- (iv) The semester final exam will be arranged centrally by the controller of examination of the University of Dhaka.
- (v) The duration of theory course final exams will be as follows:

Credit	Duration of Exam
3 credits course	3 hours

- (vi) Duration of lab exam will be defined by the institute.

6.10 Promotion to the Next Academic Year

A student has to attend courses required for a particular semester, appeared at the annual exams and scored a minimum specified CGPA for promotion to the next year.

Promotion to the next year will be given if a student scores minimum CGPA as follows:

Year Description	CGPA
1 st year to 2 nd year	CGPA: 2.00
2 nd year to 3 rd year	CGPA: 2.25
3 rd year to 4 th year	CGPA: 2.50

6.11 Requirements for the Award of the B.Sc. Engineering in Footwear Engineering Degree

- (a) The student Must earn required credits in a maximum period of six academic years starting from the date of admission at 1st year 1st semester.
- (b) The student Must obtain CGPA of at least 2.5 out of 4.00 to achieve the B.Sc. in Engineering Footwear Engineering degree without “F” grade in any course.

6.12 Tabulations

- (a) The exam committee will appoint two tabulators.
- (b) Tabulators will receive marks of all courses from the chairman of the Exam committee.
- (c) The two tabulators will independently prepare the tabulation sheets and compare before submitting it to the office of the Controller of Examination through the Chairman of Exam committee.

6.13 Improvement Examination

- (a) A student will be allowed a single earliest available chance to clear “F” grade/grades complying with the time requirement for the degree. A student will not be allowed for grade improvement if he or she passes and the final semester result is published.
- (b) A student may sit for improvement exam for courses where grade obtained is less than or equal to “C+” (C plus) and the best grade that a student can be awarded is “B+” (B plus). However, if the grade is not improved the previous grade will remain valid.
- (c) Improvement exam for all odd semesters will always be held with immediate next even semester and the same exam committee will conduct the improvement exam (for example, 1st semester improvement exam will be held on immediate 2nd semester, 3rd semester in improvement exam will be held on immediate 4th semester, 5th semester improvement exam will be held on immediate 6th semester, 7th semester improvement exam will be held on immediate 8th semester. Improvement exam for all even semesters will always be held with immediate next academic session or batch.
- (d) In case of improvement exam in addition to usual fees a fine will be charged by the institute through its Academic Committee

6.14 Re-admission and Dropout

- A student may be allowed re-admission for a maximum of two times to complete the B.Sc. Engineering in Footwear Engineering program.
- A student may seek re-admission provided he or she has at least 30% (thirty percent) attendance in the previous semester or year.
- A student who is unable to get minimum required CGPA even after taking re-admission twice will be dropped out from the academic program.

6.15 Director's Award

In recognition of excellent academic performance students may be given Director's Merit Award for every batch after completion of the B.Sc. Engineering in Footwear Engineering program as per following criteria.

- An awardee must not have appeared in any improvement exam during his or her study period.
- An awardee must have CGPA 3.75 or above.
- However, the number of awardees of each group/discipline will not exceed two. In case of equal CGPA the final semester CGPA will be considered to break the tie.

6.16 Other General Regulations

For any matter not covered in the above guidelines, existing rules of the University of Dhaka will be applicable.

Disciplinary and punishable actions will be applied according to the existing rules of the University of Dhaka.

7. Rules and Guidelines for M.Sc. Engineering in Footwear Engineering Program

The rules and guidelines of the M.Sc. Engineering in Footwear Engineering have been approved by the Academic Committee meeting dated 29th October 2020, BoG meeting dated 11th November 2020 and finally have been approved by the Academic Council dated 10th December 2020. It will be effective from Session 2020-2021 and onward.

7.1 The Master of Footwear Engineering Program

The Master of Footwear Engineering program in the Institute of Leather Engineering and Technology, comprises three semesters, each having duration of six academic calendar months to be distributed as follows:

- | | |
|--------------------------------|---|
| (a) Classes | : Fifteen active weeks |
| (b) Preparatory Leave | : Maximum two weeks |
| (c) Semester Final Exam | : Two weeks |
| (d) Vacation | : Only the usual Dhaka University's vacation will be applicable |
| (e) Result publications | : Within two months from the last theory exam date of thesis defense date |

7.2 Admission

Students will be admitted to the institute as per University rules.

7.3 Definition of Credit

For theoretical courses fifteen class-hour of fifty minutes each is defined as one credit.

7.4 Credit Requirements for the Master of Engineering Degree

- | | |
|--------------------------------|------|
| (a) Total Credits | : 36 |
| (b) Credits for theory courses | : 21 |
| (c) Credit for thesis | : 15 |

7.5 Grades and Grade Points

The University Grants Commission (UGC) of Bangladesh approved grading system applies to calculate grade and grade points. Grades and grade points will be calculated on the basis of marks obtained in any type of examination.

Marks	Letter Grade	Grade Point
80% and Above	A+	4.00
75% to < 80%	A	3.75

70% to < 75%	A-	3.50
65% to < 70%	B+	3.25
60% to < 65%	B	3.00
55% to < 60%	B-	2.75
50% to < 55%	C+	2.50
45% to < 50%	C	2.25
40% to < 45%	D	2.00
Less Than 40%	F	0.00
	I	Incomplete
	W	Withdrawn

- (a) Only “D” or higher grade will be counted as credits earned by a student.
- (b) A student obtaining “F” grade in any course will not be awarded degree.
- (c) CGPA (Cumulative Grade Point Average) is the weighted average of the grade points obtained by a student in all the courses. CGPA will be calculated according to be following formula:

$$\text{CGPA} = \frac{\sum(\text{grade points in a course} \times \text{credits for the course})}{\text{total credits taken}}$$

- (d) In the tabulation process, only the total marks of a student in any course will be rounded-up to next number and the published result of the program will show only the grades earned and the Cumulative Grade Point Average (CGPA) at the end of each semester.

7.6 Marks Distribution for a Course

(a) Theory course

(i) Attendance	10%
(ii) In-course exam	30%
(iii) <u>Final exam</u>	60%
Total Marks	100

(b) Thesis

(i) Defense	: 40%
(ii) <u>Report Evaluation</u>	: 60%
Total Marks	100

(c) Guidelines for Attendance Marks

Attendance (%)	Marks (10)
90 and above	10
85 to 89	8
80 to 84	6
75 to 79	4
60 to 74	2
Less than 60	00

7.7 Exam Committee Formation

- (a) At the beginning of each academic semester/session, an exam committee shall be formed for that semester/session by the academic committee of the Institute. Chairman of the exam committee will act as a course coordinator for that semester/session. The role of a course coordinator is to monitor the academic activities and report to the Director of the Institute to avoid any unexpected situation.
- (b) The exam committee will consist of four members proposed by the Academic Committee of the Institute.
- (c) The committee members are a Chairman, two internal members from the Institute and one external member outside of the Institute.
- (d) The exam committee will manage or coordinate all exam related activities as per university rules.

7.8 Evaluation of the Courses

a. Theory Courses Evaluation

The performance of a student in a theory course will be evaluated in the following ways:

- (i) For a theory course the evaluation will be made on the basis of attendances / quiz/assignment/presentation, in-course exam and final exam.
- (ii) For any courses attendance, quiz/assignment/presentation, in- course exam will be evaluated by the course teacher and the result must be submitted to the exam committee and controller of exam before commencement of semester final examination.
- (iii) The percentage of attendance of students for each course (according to the format supplied by the Director) along with the attendance sheet must be submitted to the Director of the Institute before commence to the semester final Exam.

- (iv) The in-course exam scripts must be shown to students before the last class of the semester.
- (v) If more than one in-course exam is taken the in course mark will be calculated by averaging all of them (**best one will not be allowed**).
- (vi) For theory courses final exam scripts generally evaluate by two examiners: course teacher will be the first examiner and the second examiner will be within the Institute or from a relevant department of University of Dhaka. If a suitable examiner is not found from University of Dhaka, a second examiner may be appointed from other universities with the prior permission from the Vice Chancellor.
- (vii) The average mark of two examiners will be considered as the mark obtained if the difference of their marks is less than or equal to 20%.
 - In case of a difference of marks between the two examiners is more than 20% the exam script will be evaluated by a third examiner. Marks of nearest two examiners will be taken for average.
 - If the differences of marks of third examiner from the first and second examiner become equal then mark obtained will be calculated from average of three examiners.

b. Thesis evaluation

Thesis will be coordinated by the examination committee. Examination committee may include external expert to assess the thesis. Thesis will be evaluated on the basis of 100% marks where there will be thesis defense (40% marks) and thesis report will evaluation (60% marks). Evaluation will be done in following ways:

(i) Pre-defense (If may or may not)

The student will defense his or her thesis work which is approved by the respective supervisor. The examination committee can accept or reject or conditionally accept the thesis for further process.

(ii) Final defense

A student will submit his or her thesis or revised thesis which was accepted or conditionally accepted in the pre-defense (if happened). The exam committee will announce specific date to defense his or her thesis and he or she has to defense on that date.

(iii) Thesis report evaluation

Two external examiners will evaluate the thesis report and their average mark will be considered. In case of a difference of marks between the two examiners is more than 20% the thesis will be evaluated by a third examiner. Marks of nearest

two examiners will be taken for average. If difference is equal, then the average of three marks will be considered.

7.9 Requirements to Sit for Course Final Exam

- (i) A student having 75% or more attendance on average is eligible to appear in the semester final Exam.
- (ii) Student having average 60-74% attendance will be allowed to sit for the exam with a fine Tk. 1000.00 (one thousand) in the University central account. In addition to usual fees, institute may fine according to the decision of the Academic Committee Meeting.
- (iii) A student having an average attendance below 60% will not be allowed to sit for the semester final exam but may seek re-admission in the program.
- (iv) In case of open credit system all the above evaluation will done course wise.

7.10

Duration of Exam

- (i) The semester final exam will be arranged centrally by the Controller of Examination of the University of Dhaka.
- (ii) The duration of theoretical course final Exams will be as follows:

Credit	Duration of Exam
3 credits course	3 hours

7.11 Requirements for the Award of the M.Sc. Engineering in Footwear Engineering Degree

- (a) A student must earn required credits in a maximum period of three continuous semester starting from the date of admission in Master in 1st semester.
- (b) A student must obtain CGPA of at least 2.5 to achieve the M.Sc. Engineering degree without “F” grade in any course to fulfill required credits.
- (c) The student can readmit for another three semesters.

7.12 Tabulations

- (a) The exam committee will appoint two tabulators.
- (b) Tabulators will receive marks of all courses from the Chairman of the Exam Committee.
- (c) The two tabulators independently prepare the tabulation sheets and compare before submitting to office of the Controller of Examination through the Chairman of Exam Committee.

7.13 Improvement/Retake Examination

- (a) A student will be allowed a single earliest available chance to clear “F” grade/grades complying with the time requirement for the degree. A student will not be allowed for grade improvement if he or she passes and the final semester result is published.
- (b) A student may sit for improvement exam for courses where grade obtained is less than or equal to “C+” (C plus) and the best grade that a student can be awarded is “B+” (B plus). However, if the grade is not improved the previous grade will remain valid.
- (c) In addition to usual fees, institute may fine according to the decision of the Academic Committee Meeting.

7.14 Re-admission and Dropout

- (a) A student may be allowed re-admission for one time.
- (b) A student may seek re-admission provided he or she has at least 30% (thirty percentages) attendance in the previous semester or year.
- (c) A student who is unable to get minimum required CGPA even after taking re-admission will be dropped out from the academic program.
- (d) In case of rejection of a thesis or “F” grade in a thesis the student can retain his or her theory course mark for a period one semester.

7.15 Other General Regulations

- (a) For any matter not covered in the above guidelines, existing rules of University of Dhaka will be applicable.
- (b) Disciplinary and punishable actions will be applied according to the existing rules of the University of Dhaka.

B.Sc. Engineering in Footwear Engineering (B.Sc. Engg. in FE)
Semester Wise Course Outline

Year-1, Semester-1			
Course Code	Course Name	Credit	
		Theory	Lab
LE-101	Fundamentals of Leather Engineering	3	
MTH-101	Algebra and Geometry	3	
PHY-101	Engineering Physics	3	
CHM-101	Inorganic Chemistry	3

Total Credit: 166.0

First Year (1st Semester)**LE-101: Fundamentals of Leather Engineering**

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives: The aims of this course are:

- To introduce the fundamentals of leather manufacture.
- To provide basic concepts of raw hide and skin processes in leather engineering.
- To deliver knowledge about several types of footwear with distinct features.
- To provide an overview of human foot functions and foot anatomy.
- To make the students to gain fundamentals knowledge about the leather products.

Course Contents:

Introduction and historical background of leather making: Definition of hides, skins and leather, define the region of hides and skin, types and sources of hides and skins, world supply position, supply position in Bangladesh.

Defects of hides and skins: Definition, pre-mortem and post-mortem defects of hide and skin and their effect on leather, methods of identification of defects, common defects of hides and skins in Bangladesh and their remedies.

Slaughtering: Slaughtering and flaying of animals, tools, equipment and techniques for slaughtering and flaying, hides and skins of slaughtered and fallen animals, cares to be taken during flaying.

Skin structure and its components: Hierarchy of collagen structure; amino acid sequence, α -helix, Triple Helix, Isoelectric point, structure of fibrous and globular proteins of connective tissues like keratin, reticulin and elastin; albumin, globulin, mucine, etc.

Histological structure: Epidermis, Grain, Junction, Corium, Flesh layer, Flesh. Skin Feature; Hair or wool, Follicles, Erector Pill Muscle, Sweat Glands, Veins and arteries, Elastin. Non-structural components; Glycosaminoglycans (GAGs), Hyaluronic acid, Dermatan Sulfate, chondroitin sulfate A and C, Melanin.

Natural and Man-made polymer: Natural; Vegetable (cellulose); Cotton, Jute, etc. Animal (protein); leather, wool, virgin wool, silk, hair etc. Mineral; asbestos. Man-made; Cellulosic; viscose, acetate etc. Rubber. Synthetic polymers, Inorganic etc.

History of Leather products and its classification: History of leather products, types of leather products, classification of leather goods, terms used in leather goods tools and machinery used in leather goods and garments manufacturing, accessories used in leather products manufacturing, definition of edge construction, types of edge construction, unit operations for leather goods.

Footwear types and requirements: Types of footwear- oxford, derby, court, moccasin, sandal, casual, boot, sports, mule, clogs, safety footwear, occupational footwear, fashion footwear etc. Bespoke footwear- meaning of bespoke footwear, advantages and customer of bespoke footwear, contribution of hose to foot comfort, properties of comfortable footwear, causes of customer dissatisfaction for footwear, footwear care.

Parts of footwear: Shoe section, parts of upper - vamp, quarter, toe cap, apron, tongue, counter, backstraps, fastenings, toe puff, stiffener, eyelets, trims/ornaments and parts of

lining. Bottom parts- insole, insock, welt, rand, bottom filler, mid sole, runner, sole, heel, shank piece. Parts of sandals.

Human foot anatomy: Necessity of foot anatomy, bones, muscles, ligament, nerves and blood vessels, joint, arches, skin etc. development of human foot from infants to adult. Characteristic features of infant, children and adult foot, biometry of human foot, types of foot, foot dynamics- weight bearing foot, walking foot, running foot, gait analysis, foot motion, foot stances, foot care and their relationship to footwear.

Learning Outcomes: At the end of the course the students will be able to:

- Understand and explain the concepts involved in histological structure and chemical composition of raw hides and skins.
- Identify the different aspects of leather and their influence on overall manufacturing process.
- Gain fundamentals knowledge about the leather products.
- Know about different types of footwear with characteristic features.
- Know about foot functions and foot anatomy.

11. Ben and Elizabeth Morris-Making Clothes in Leather
12. Roland Kilgus editor-Clothing Technology from fibre to fashion

MTH-101: Algebra and Geometry

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives:

- To know about Inequalities, Vector algebra and vector calculus
- To know about Matrices and Determinants
- To know about Applications of the Algebra in science, engineering and business
- To know about Two and three-dimensional geometry

Course Contents:

Inequalities, Vector algebra and vector calculus: Review of geometric vectors in R^2 and R^3 space, scalar and vector products, solutions of vector equations, applications of vectors in geometry, Vectors in R^n and C^n . Inner product. Norm and distance in R^n and C^n .

Matrices and Determinants: Notion of matrix, Types of matrices, Matrix operations, laws of matrix Algebra, Determinant function, Properties of determinants, Minors, Cofactors, expansion and evaluation of determinants, Elementary row and column operations and row-reduced echelon matrices, Invertible matrices.

System of Linear Equations: Linear equations. System of linear equations (homogeneous and non-homogeneous) and their solutions. Application of Matrices and determinants for solving system of linear equations.

Applications of the Algebra in science, engineering and business.

Two-dimensional geometry: Change of axes, pair of straight lines, and general equation of second degree, circle, and system of circle, parabola, and hyperbola.

Three dimensional geometry: Plane and lines - co-ordinates, direction ratios and cosines of a line, equations of a line and a plane, intersecting planes, symmetric form of a straight line, angle between lines and planes, coplanar lines, skew lines, shortest distance, curved surfaces, equations of a sphere, section by a plane, tangent plane, standard equations of cone, cylinder and conchoids properties.

Learning Outcomes:

- Compute dot and cross product of vectors.
- Find the length of a vector.
- Define basic terms and concepts of matrices and determinants.
- Solve system of linear equations.
- Determine different properties of straight lines, circles and conics with identification of curves.
- Determine directional cosines and directional ratios of straight lines manually with geometric interpretations, and different properties of conics and straight lines in three dimensions.

Reference Books:

1. H. Anton, and C.Rorres, Linear Algebra with Applications, 7th Edition,
2. S. Lipshutz, Linear Algebra, Schaum's Outline Series.
3. W. Greub, Linear Algebra.
4. Khosh Mohammad, Analytic Geometry and Vector Analysis.
5. J. A. Hummel, Vector Geometry.
6. A.F.M. Abdur Rahman & P.K. Bhattacharjee, Analytic Geometry and Vector Analysis

PHY-101: Engineering Physics

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives:

- To provide a broad training in physics and demonstrate the students on various skills including; expertise with core physics concepts and their applications to relate the physical phenomenon with the practical problems in engineering purposes, proficiency in problem solving, critical thinking, and analysis.

- In future, it will help the students to function effectively in laboratory environment and pursue independent research towards the development of new devices and products using sophisticated physical concepts.

Course Contents:

Elasticity: Rigid body, perfectly elastic body, plastic body, stress and strain, stress-strain curve for ductile and brittle material, Hooke's law and different elastic constants-moduli of elasticity, poisson's ratio, determination of elastic constants, factors affecting elasticity.

Surface Tension: Surface energy and surface tension, excess of pressure inside a spherical liquid drop, capillarity.

Fluid mechanics: Fluids, types and properties of fluids, fluid statics, fluid flow, equation of continuity, Bernoulli's equation.

Optics: Theories of light, Electromagnetic spectrum, optical instruments: compound microscope, polarizing microscope, camera and photographic techniques, spectrophotometer, Interference of light, Young's experiment, Fresnel's bi-prism, Newton's rings, diffraction of light: Fresnel and Fraunhofer diffraction, diffraction gratings, resolving power of a grating, polarized and unpolarized light, polarization by reflection and refraction, Brewster's law, Malus's law, double refraction, polarization by scattering, optical activity.

Heat: Humidity, vapor pressure, temperature related humidity, transmission of heat, thermal conductivity of solids and liquids, coefficient of thermal conductivity, good and bad conductor of heat, heat flow through compound walls, convection, free and forced convection, domestic and industrial application, ventilation.

Sound: Sound wave, sound field, power and intensity, sound pressure level, psycho-acoustics, loudness, pitch, masking, types of noise.

Electricity and magnetism: Electric charge, Coulomb's law, electric field, electric dipole, electric flux and Gauss's law, applications of gauss's law, electric potential, equipotential surface, capacitor capacitance and dielectrics, combination of capacitors in series and parallel, dielectrics and Gauss's law, energy storage in an electric field, electric current and current density, resistance, resistivity and conductivity, continuity equation, Ohm's law Combination of resistances, Kirchhoff's laws, Wheatstone bridge, Lorentz force, Ampere's circuital law with applications, solenoid, toroid, electromagnetic induction-Faraday's laws, Lenz's law, self and mutual induction, inductor and inductance, energy stored in magnetic field.

Nuclear physics and modern physics: Properties of atomic nucleus, mass defect, binding energy, nuclear stability, natural and artificial radioactivity, laws of radioactive disintegration, half-life and mean life, radio-toxicity, radioactive waste management. X-ray and their applications, Crystal structure, Fundamental types of lattices, Miller indices Wave particle duality, de-Broglie hypothesis, Photo-electric effect, Compton effect.

Learning Outcomes: Successful completion of this course will help students with following outcomes:

- Work efficiently in leather, leather products, and footwear industries where proper application of engineering knowledge requires the basics of physics.

- Solve problems with critical thinking and effective communication.
- Ready for entry level research and secured positions in industry.
- Recognition for students in other majors who wish to enhance their understanding and mastery of a broader range of subjects than is provided in their core courses alone.
- Ability to communicate their ideas with others and function effectively in multidisciplinary terms.
- Start career as a practicing engineer in fields such as design, research, development, testing, manufacturing, operations, and service systems.

Reference Books:

6. F.Sears and G.L. Salinger -Thermodynamics, Kinetic Theory and Statistical Thermodynamics
7. S.C.Arrora/S. Domkundwar-A Course in Heat & Mass Transfer.
8. Harvey E.White/Francis A. Jenkins-Fundamentals of Optics.
9. ArtherBeiser-Concepts of Modern Physics.
10. C. L. Arora -B.Sc. Physics, Vol-I & II.

CHM-101: Inorganic Chemistry

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives: This course will guide the students to learn about-

- This course serves as a cursory to understand the basic concepts involved in inorganic chemistry including periodic properties, acid-base reactions, redox reaction, chemical bond, transition metals and coordination chemistry that will prepare the student for advanced coursework in chemistry as well as in Leather Chemistry.
- It explores the unknown knowledge of different types of bond exist leather.
- The course will provide a foundation for further education in chemical science directed towards materials, energy technology and leather process chemistry.

Course Contents:

Concepts in Chemical Bond: Concepts and types of chemical bonding, polarization of ions, Fajan's rule, metallic bond, Pi back bonding, organic metallic compounds, hydrogen bond, intermolecular interaction, London force, van der Waal's forces, MOT, VBT, and VSEPR theories.

Acid-Base concept: Modern concept of acids and bases, acid and base strength, pH, buffer solution and its mechanism, importance of pH in tanning processes, acid base indicator, equivalent point and end point, acid-base titration, precipitation titration, oxidation-reduction

titration, potentiometric titration, strong and weak electrolytes, degrees of dissociation, Oswald dilution law, dissociation constants of weak electrolytes.

Structure of transition metal complexes: Synthetic strategies to transition metal complexes, spectroscopy of co-ordination compounds, structure and property relations in 'd' block elements. Aqueous chemistry of chromium, titanium, iron, aluminium and zirconium including their redox behavior, application of transition metal compounds in tanning.

Theories of Co-ordination: Coordination or complex compounds, ligands or co-ordinating groups, coordination number, primary and secondary valency, coordination sphere, chelate complexes, application of chelates, nomenclature of coordination compounds, isomerism-structural, geometrical, optical, optical isomerism in 6-coordinate complexes, Werner's coordination theory, effective atomic number (EAN), limitation of EAN rules, Valence Bond Theory (VBT) of structure of inorganic complex with simple examples, Crystal Field Theory, application of crystal field theory color of transition metal complexes.

Inorganic compounds used for tannings: Chromium salts, its behavior in solution, variable oxidation state of chromium, color of chromium compounds, structure and bonding of chromium in leather, impact of chromium on the environment, way to avoid Cr(VI) formation in leather, application of chromium compounds in leather.

Learning Outcomes: After completion of this course the students will be able to

- Understand the different types of bonding in leather.
- Learn types of bond involved in complex compound, complex ion and chromium-collagen bond formation in leather.
- Explain different oxidation state of transition metal elements especially iron and chromium.
- Explain pH and its implications in different steps of leather tanning process.
- Understand different color of chromium compounds.

Reference Books:

1. G. F. Lipotrot- Modern Inorganic Chemistry.
2. F. Albert Cotton, Geoffrey Wilkinson, Paul L. Gaus- Basic Inorganic Chemistry.
3. Esmarch S. Gilreath- Fundamental Concepts of Inorganic Chemistry.
4. S. Z. Haider- Introduction to Modern Inorganic Chemistry.
5. H. J. Emeleous and A. G. Sharpe- Modern Aspects of Inorganic Chemistry.
6. R. D. Madan- Modern Inorganic Chemistry.
7. A. K. De- A Text Book of Inorganic Chemistry.
8. K. N. Upadhyaya- A Text Book of Inorganic Chemistry.

CHM-102: Physical Chemistry

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives: The learning objectives of this course are to-

- understand the scientific and mathematical principles underlying their chosen discipline
- understand and explain different laws of physical chemistry
- make analytic in calculating physico-chemical parameters using standard equations

- Increase ability for interpreting the tabulated experimental data for different physical processes.
- Promote knowledge on the basic concepts of the Physical chemistry to enter into the field of engineering education.

Course Contents:

Surface chemistry: Adsorption and absorption, physical and chemical adsorption, types of adsorption isotherms, theoretical study of adsorption of gas by solid, adsorption of solid from solution, application adsorption.

Colloid: True solution, suspension, types of colloid, general methods of preparation and purification, general properties (Physical, colligative, kinetic, optical and electrical properties) of sol, protective action and application of colloid, emulsion, types and preparation of emulsion, emulsifier, stability of emulsions, application of colloids in tanning processes.

Photochemistry: Laws of photochemistry - Grotthuss-Draper law, Stark-Einstein law and Lambert-Beer Law (derivation and problems). Photo physical processes – Jablonski diagram. Chemiluminescence, fluorescence, phosphorescence, luminescence, photo-sensitization and photoquenching – mechanism and examples. Spectroscopy: Electromagnetic radiation, electromagnetic spectrum - absorption of radiation - electronic, vibrational and rotational transitions.

Chemical kinetics: Rate of reaction, order and molecularity, elementary and overall reaction integral rate equation for 1st, 2nd, and 3rd order kinetics, determination of order of reactions, temperature dependence of reaction rate, simple theories of reaction rate, energy of activation, collision theory of reaction rates.

Properties of dilute solution: Review of different types of solution, Colligative properties-lowering of vapor pressure, elevation of boiling point, depression of freezing point, osmotic pressure and osmosis, deduction of their chemical formula & molecular weight from Raoult's Law, their experimental determination, application of colligative properties, osmosis in leather processing.

Thermodynamics: Work, heat, energy, internal energy and enthalpy, some thermodynamic terms, first law of thermodynamics, reversible and irreversible processes, isothermal and adiabatic expansion of ideal gas, Joule-Thomson effect, molar heat capacity at constant pressure and constant volume and their relation, second law of thermodynamics, spontaneous process, entropy, entropy changes for ideal gas, Carnot's cycle, efficiency of a machine, free energy and work function, Gibbs-Helmholtz's equation.

Learning Outcomes: Upon completion of the course, the students should be able to

- Use dimensional analysis in solving different types of problems.
- Explain colloid and its implications in different steps of leather tanning process.
- Understand and apply laws of photochemistry and surface chemistry.
- Describe different kinetics law and reaction rate theories.
- Understand& explain four colligative properties.
- Understand and apply laws of thermodynamics in advance courses.

Reference Books:

1. G. M. Barrow- Physical Chemistry.

2. W. J. Moore- Physical Chemistry.
3. Bahl And Tuli- Essentials Physical Chemistry.
4. Sharma and Sharma- A Text Book of Physical Chemistry.
5. S. Glasstone-Text Book of Physical Chemistry.
6. P. W. Atkins- Physical Chemistry.
7. Taylor and Taylor- Elementary Physical Chemistry.
8. Moron and Lando- Fundamentals of Physical Chemistry.
9. J. Bruce Brackenridge & Robert M. Rosenberg- The Principle of Physical Chemistry.
10. Samuel H. Maron& Carl F. Prutton- Principle of Physical Chemistry.

CHM-103: Inorganic and Physical Chemistry Lab

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0/Group

Lab based of the content of CHM-101 and CHM-102

ME-101: Engineering Drawing

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0/Group

Learning Objectives:

- To know about different types of drawing equipment
- To know how to represents letters & numbers in drawing sheet
- To know about different types of projection
- To know projection of points, straight lines, solids etc.
- To know development of different types of surfaces.

Course Contents:

Drawing equipment and the use of instruments; Basic drafting techniques, planning of drawing sheet. Dimensioning, types of lines.

Development of surfaces of prism, pyramids, cylinders and cones, Geometrical curves including plane curves; Cycloid, Hypocycloid, and the Involute. Lettering, numbering. Orthographic projection. Isometric projection. Auxiliary projection. Sectional view. Assembly drawing. Perspective. Drawing of gear tooth profile cam profile.

Learning Outcomes: Upon completion of the course, the students should be able to

- know about different types of drawing equipment
- know how to represents letters & numbers in drawing sheet
- know about different types of projection
- know projection of points, straight lines, solids etc.
- know development of different types of surfaces.

HUM-101: Employability Skills-I

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0/Group

Learning Objectives:

- To develop ability to gain key strategies and expressions for communicating with professionals and non-specialists.
- To improve the skills of writing, for example, report or letter writing.

Course Contents:

Language: Its function as a primary means of communication to the technologist, writing, speaking, listening and reading, difference between written and spoken language, Language appropriate to task. Planning-format, paragraph heading, context, vocabulary etc. Listening, understanding and speaking Skill: Effective Communication between speaker and listener, Techniques of description, Uses of Visual aids. Reading skill: Technical literature, Books, Magazines, and Scientific Journals etc. Definition of Communication:

Sender-Message + Encoding-Medium-Receiver + Decoding-Feed back

Different types of Communication: Intrapersonal communication, Interpersonal Communication

Small group Communication, Organizational Communication, Intercultural Communication Mass Communication etc. Significance of Communication:

Special significance of Communication in corporate and multi-national business organizations.

Use of Communication by Management: Written notice, Face-to-face conversation, Group meeting, Seminar/conferences Organizational

Communication Network: Vertical Communications Down-ward Communication and upward Communication, Horizontal Communication, Systems of Communication: Stimulus to Communication, Communication components

Letter Writing: Drafting private letters, Applications, Letters of complaint, Letters to the press, Apology and Explanation, Request letters, Business letters-Planning your letters, Selecting formats, Using short-cuts, Evaluating letters.

Characteristics of Business letters: Kinds of letter, purpose of letters, Functions of a First, Middle and Last Paragraph(s), Characteristics and drafting process of Positive letters, Negative letters, Persuasive letters, Routine letters and Memos.

Report Writing: Types of report, Characteristics and importance of different types-Purpose-Scope-different styles of writing reports. The process of preparing informal and formal reports, Drafting reports, Progress reports, Technical reports, Industrial reports etc.

Proposals: For new equipment, increasing production, Description of visits, Experiments etc. Explaining: Process explaining, Complaining, Reporting damage etc.

Learning Outcomes:

- Recognize, explain, and use the formal elements of specific genres of organizational communication: white papers, recommendation and analytical reports, proposals, memorandums

- Understand how to critically analyze data from research; incorporate it into assigned writing clearly, concisely, and logically; and attribute the source with proper citation.
- Practice the unique qualities of professional rhetoric and writing style, such as sentence conciseness, clarity, accuracy, honesty, avoiding wordiness or ambiguity, using direct order organization, readability, coherence and transitional devices.

Reference Books:

- Gartside's Model Business Letters and Other Business Documents, Shirley Taylor.
- Business correspondence and Report Writing, R. C. Sharma & Krishna Mohan.
- The Complete Degree General English Grammar and Composition, Amjad & Hoq.
- Advanced Lerner's Degree General English, Chowdhury & Hossain.
- High School English Grammar & Composition-PC. Wren and H. Martin.
- Business Communication Systems and Application, Betty R. Ricks & Kay F. Gow, John Wiley & Sons, USA.
- A University Grammar of English-Randolph Quirk and Sidney Greenbaum.
- A Practical English Grammar-A.J. Thomson/A.V. Martinet (Latest edition).

LE-102: Field Tour

Credit	Class/week (h)	Total Class (h)
1.0	-	-

The students shall have a daylong visit of one relevant industry.

First Year (2nd Semester)

LE-103: Leather Processing-I

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives:

- To know different stages of pre-tanning process
- To understand the importance of different stages of pre-tanning
- To comprehend the chemistry and mechanism of unhairing and liming
- To learn the methods of pre-tanning processes

Course Contents:

Preservation / curing of hides and skins: Introduction, objectives and principles of preservation, short and long terms preservation, methods of preservation/curing, advantages and disadvantages of different types of curing, factors affecting preservation / curing process.

Sorting and gradation of raw hides and skins: Principles; objectives, methods of sorting and grading of hides and skins, importance of sorting and grading in leather processing.

Beam house operation/ Pre-tanning Processes: Introduction and role of beam house operations in leather making.

Soaking: Objects and mechanism of soaking, soaking of green, wet-salted, dry-salted and dried (flint)hides and skins, enzymatic soaking, factors influencing the soaking process, role of hyaluronic acid in soaking, aids and controls in soaking, cleaner methods of soaking, eco-

friendly process technologies in soaking; enzymatic soaking, soaking defects and their remedies, Green fleshing- its advantages and limitations for the production of quality leather.

Unhairing and Liming: Objectives of unhairing and liming, types of unhairing and liming, hair saving method, hair burning method, advantage and disadvantage of hair saving method and hair burning method, immunization of keratin, swelling of collagen based on Dornan's theory, mechanism of unhairing, sulphide free unhairing system, enzymatic in unhairing, control of enzymatic unhairing, advantages and disadvantages of enzymatic unhairing, scope for hair utilization or disposal, prevention of H₂S emissions from lime effluents.

Fleshing Objectives of fleshing, types of fleshing, advantage and disadvantage of fleshing.

Deliming and bating: Objectives of deliming and bating, selection of deliming agents, test of deliming, mechanism of bating, effect of bating on leather quality, acid bating, alkali bating, advantage and disadvantage of acid bating over alkaline bating, polluting emissions in deliming and bating, cleaner technologies options (ammonia free) in deliming and bating, enzyme working mechanism in bating, solvent free degreasing system. Chemistry of proteolytic enzymes used for bating, necessity of bating, Its preparation and controls for desired properties of leather.

Pickling: Acid binding capacity of collagen, use of organic acids or salts in pickling, its necessity and controls, concept of, de-pickling.

Degreasing Objects and necessity of degreasing, different systems and methods.

Learning Outcomes: At the end of the course the students will be able:

- to explain the necessity of different stages of pre-tanning process
- to elucidate the methods of soaking, liming, de-liming, pickling and degreasing
- demonstrate different process of leather making like soaking, liming, deliming, bating, pickling and tanning

LE-104: Leather Processing-I Lab

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0 /Group

Learning Objectives: The aim of this course is to:

- Introduce students to quantitative & qualitative methods for conducting meaningful inquiry and practical.
- Enhance the students' ability to analyze and critically evaluate the issues of practical in the realm of leather manufacturing engineering.
- Enhance knowledge and skills of student for designing and conducting an academic practical independently.

Course Contents:

1. Curing of freshly flayed cowhide and goatskin with sodium chloride (Common salt) and its effect on water content at different time interval.
2. Enzyme soaking of cow hides and goat skins
3. Determination of rate of water uptake and degree of swelling of cow hides and goat skins during soaking.
4. Paint unhairing of wet salted goat skins and sheep skins
5. Liming with slaked lime and sodium sulphide with and without enzyme.
6. Deliming of cow hide with boric acid, lactic acid, ammonium and ammonium sulphate.
7. Bating of goat skins with pancreatic bate.
8. Determination of the rate of acid uptake by cow hides during the pickling.
9. Effect of sodium chloride on pickling
10. Identification of leather based on pore structure (Grain patterns).
11. Manufacture of chrome- tanned leather.

Learning Outcomes: At the end of the course the students will be able to:

- Display familiarity with a broad array of methods and approaches that are used within the industry.
- Demonstrate practical competence in critical thinking by presenting and evaluating arguments in an academic fashion.
- Develop a manufacturing hypothesis and frame the manufacturing problem with the correct methodology.
- Know how to write a process recipe using mixed methods of practical.
- Apply practical mythological tools and techniques for conducting research & development in the areas of leather engineering.

10. Leather Technician's Handbook –J. H. Sharphouse, Vernon Lock Ltd., 125 High Holborn, London W-C1.

CSE-101: Fundamentals of Computer and Information Technology

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives:

- To aim at imparting a basic level computer knowledge for the students.
- To understand how a computer operates, and how a computer process and store data.
- To learn the basic knowledge on a computer network and other associated things related computers.
- To learn the Information and Data management as well as the functionalities of Information System.

Course Contents:

Computer Architecture: Introduction to computer and its history, Organization and architecture of computer, Internal Mechanism of Computer, Computer hardware and Software, Software classification with its development phases, Operating system and its components.

Computer Software: Operating system concepts, Software, Software classification with its development phases, Operating system and its components.

Computer Programming Basics: Introduction, Basics of Computer programming. Computer Networks and Internet: Concepts of network, different types of network and topologies, study of LAN concepts and operation, hardware and software for networks, data transmission, network architectures, study of connectivity between LAN and wide area networks, Networking Protocols, Mobile network, Different types of mobile network, GSM, CDMA, World wide web including navigating the internet, Internet services: Telnet, FTP, e-mail, www, internet, Intranet, Bluetooth, Wi-Fi, etc.

Information and Data Management: Introduction to Data and Information, Data and Management Strategy, Database Concept, Types of Database, Database Management.

Information System: Introduction of Information System, the Decision-Making Process, System Approach to Problem Solving, the Structure of Management Information System, Kinds of Information Systems. Basics of Enterprise Resource Planning (ERP), Evolution of ERP, Enterprise Systems in Large Organizations, Benefits and Challenges of Enterprise Systems

Learning Outcomes:

- Makes students aware of the computer and information Technologies, their internal mechanism and classifications.
- Teaches the basic of the Internet, mobile, and wireless communications.
- Students learn the fundamental of computer programming as well as software development process and networking.

- Describes the Information System briefly with real example.

Reference Books:

1. S. Frence- Computer Science.
2. Warford- Computer Science.
3. Peter Norton – An Introduction to Computer Science
4. L. Rosch- Hardware Bible, Baraddy Publishing, Indianapolis.
5. Clive Finkelstein – An Introduction to Information Engineering
6. Ian Macdonald - Information Engineering
7. James Martin - Information Engineering: Introduction
8. Kenneth C. Laudon and Jane P. Laudon- Management Information Systems: Managing the Digital Firm
9. James A. O'Brien George M. Marakas - Introduction to Information System

CSE-102: Fundamentals of Computer and Information Technology Lab

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0/Group

Learning Objectives:

- To learn Office Word, Excel and PowerPoint to students.
- To understand the basic of preparing his personnel/business letters, viewing information on Internet (the web), sending emails, using internet banking services etc.
- To understand the basics of computer programming and database

Course Contents:

Operating system: Students will learn how to operate a computer in two basic environments- dos and windows and to install DOS, windows operating system.

Word and Power Point: Students will learn to use a popular word processing software to create a camera-ready test file complete with figures, columns and tables. They will also learn to make presentation for business meeting or any conference.

Spread sheet: Students will learn how to use a popular spread sheet to maintain a minor book keeping, statistical and graphical analysis off data.

Data base: Students will learn how to design a database structure/table.

Programming: student will learn very basic of computer programming.

Learning Outcomes:

- Students will learn to use a popular word processor to create a camera-ready test file complete with figures, columns, and tables.
- Students will have the ability to prepare power point and present effectively.
- Students will learn how to use a popular spreadsheet to maintain a minor book keeping, statistical and graphical analysis of data.
- Students can understand how to design a database structure/table.
- Student will learn the basic of computer programming

MTH-102: Calculus

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives:

- To provide a firm foundation in the concepts and techniques of the calculus, including basic functions and graphs and their properties, curve sketching, limits, continuity, differentiation, relative extrema and applications.
- To learn integral calculus, to the techniques of integration and to some of the applications of integration to physical problems.
- To learn the application of calculus in commerce and economics.

Course Contents:

Differential calculus: Functions of real variable and their graphs, Limits of Functions, Continuity and Derivative, Higher Derivatives, Leibnitz Theorem, Rolle's theorem, Mean Value theorem, Taylor's theorem, Taylor's and Maclaurin's series, Maximum and Minimum values of functions and applied maximum and minimum problems in science, and engineering, functions of two and three variables.

Application of Differential calculus in commerce and economics: Cost Function, Demand Function, Revenue function, Profit Function, Break-Even Point, Average and Marginal Functions.

Integral calculus: Integrals: Antiderivatives and indefinite integrals, Techniques of integration, Definite integration using antiderivatives, Definite integration using Riemann sums, Applications of the definite integral in geometry, science, and engineering.

Fundamental theorems of calculus: Basic properties of integration. Integration by reduction, Application of integration: Plane areas. Solids of revolution. Volumes by cylindrical shells. Volumes by cross-sections. Arc length and surface of revolution. Improper integrals: Gamma and beta functions.

Application of integration to commerce and economics: Determination of cost function, Determination of Total Revenue Function.

Vector calculus: vector function of scalar variables, differentiation of vector functions and applications.

Learning Outcomes:

- Interpret a function from an algebraic, numerical, graphical and verbal perspective and extract information relevant to the phenomenon modeled by the function.
- Understand the concept of limit and continuity of a function at a point graphically and algebraically using appropriate techniques.
- Interpret the derivative of a function at a point as the instantaneous rate of change and as the slope of the tangent line, and understand the consequences of Rolle's Theorem and the Mean Value theorem for differentiable functions.
- Evaluate integrals using different techniques of integration.
- Learn how to calculate the area between curves, volumes of solids of revolution, surface area, arc length using integration.

Reference Books:

1. H. Anton et al, Calculus with Analytic Geometry.

2. E.W. Swokowski, Calculus with Analytic Geometry.
3. L. Bers & P. Karal, Calculus.
4. S. Lang, A First Course in Calculus.
5. Frank S. Budnick; mathematics for commerce economics and business.

CHM-104: Organic and Collagen Chemistry

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives: The learning objectives of this course are to-

- Make students understand the fundamental principles of organic chemistry, synthesis and reactivity of important functional groups.
- gain experience to predict the functional group transformations, simple reaction mechanisms, and the synthesis of organic molecules by multi-step synthesis strategies
- Help students to understand the chemical reactions occur during leather processing.
- acquire concepts of metal-collagen cross linking in leather.

Course Contents:

Molecular bonding: Valence bond approach and atomic orbital hybridizations. LCAO-MO theory, Electronic Displacements: Inductive, electromeric, resonance and mesomeric effects, Hyper conjugation and their applications; Dipole moment; Organic acids and bases; their relative strength. Aromaticity: Hückel's rule, Electrophilic and nucleophilic aromatic substitution reactions, Redox reactions.

Organic tanning agents and compounds: Chemistry of condensed and hydrolysable tannins proantho cyanidins, dimers, trimers and other oligomers. Chemistry of sulphonyl chloride, quinone, oxazolidine, phosphonium and other organic tanning agents. Methods of preparation of vegetable tannin extracts, spray dried vegetable tannins, generation stability of organic reactive intermediates: carbocations, carboanions, free radicals, carbenes, benzynes, nitrenes, amines, diazonium salt formation, coupling reaction, azo compounds, azo dye, banned amines.

Amino acids and proteins: Introduction, classification of amino acids, synthesis of amino acids, physical and chemical properties of amino acids, synthesis of polypeptides, characteristics of proteins, classification of proteins, structure of proteins.

Molecular structure of collagen: Arrangement of amino acid, peptide chain, collagen genes and RNA, amino acid composition and primary structure – Double helix structure, collagen triple helix; helix stabilization–synthetic collagen like polypeptides, denaturation, renaturation, stabilization. X-ray diffraction studies of collagen, electron microscopic appearance of collagen.

Properties of collagen fibre: diameter, strength, three dimensional weave of collagen in leather, water retention capacity, inter weave, angle of inter weave in leather, bonding, tensile strength, flexibility.

Collagen crosslinks: Crosslink, properties of crosslinks - intramolecular and intermolecular crosslinks, difunctional and multifunctional crosslinks, lathyrism and crosslinks, analysis of collagen crosslinks.

Characterization of collagen: Chromatographic properties, electrophoretic properties. Microscopy and spectroscopy techniques for collagen morphology. Non-invasive methods of liquid and solid imaging of biological specimen and their relevance to location of defects in hides/skins.

Learning Outcomes: Upon completion of this course students will be able to-

- illustrate the hybridization and geometry of atoms and the three-dimensional structure of organic molecules
- explain the fundamental properties, reactivity and stability of an organic molecule based on structure, including conformation and stereochemistry
- understand the behavior of organic tanning material
- gather knowledge on amino acid, protein structure in leather
- enhance knowledge on DNA, three-dimensional collagen structure, crosslinking and strength of leather fibre.

CHM-105: Organic and Collagen Chemistry Lab

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0/Group

Lab based on the content of CHM-104.

PSE-101: Polymer Science and Engineering

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives:

- To know the background of macromolecular science, importance of monomers and polymers, structure, properties and classification of polymers.

- To understand basic aspects of the solution properties of polymers, interactions and the relationship to chemical structure, including phase behavior and the measurement of molecular weight.
- To gather the basic knowledge of collagen chemistry

Course Contents:

Polymers: Introduction, classifications, polymerization, mechanisms, polymerization techniques, bulk, solution, suspension, emulsion, solid and liquid phase. polycondensation techniques, melt, solution and interfacial.

Step-growth polymerization, Functionality, Crosslinking; PET manufacturing; Chain growth polymerization, Free radical polymerization, Kinetics of free-radical initiation, termination, chain transfer, Mayo's equation, cage effect, autoacceleration, inhibition and retardation;

Polypropylene manufacturing; Acrylic manufacturing; Atom transfer radical polymerization, ionic polymerization, ring opening polymerization; Nylon-6 manufacturing; Co-polymerization and its importance. Copolymer equation, reactivity ratio, tailor making of copolymer properties; Techniques of chain polymerization; Bulk, solution, emulsion, microemulsion and suspension polymerization; chemical modification of fibres; Polymer solution, Flory's theory; Interaction parameter.

Molecular weight and its distribution by: End group analysis, osmometry, light scattering, ultra-centrifugation, gel permeation chromatography, intrinsic viscosity; Spectroscopic methods of polymer characterization such as, FTIR. UV, NMR and others.

Compounding of polymers - fillers, plasticizers, antioxidants, UV stabilizers, colouring agents and flame retardants. Polymer processing - compression, moulding, injection, extrusion, calendaring and film casting; Preparation and properties of polyesters, polyamides, epoxy and silicone polymers; Conductive polymers, super absorbent polymers. Recycling, remoulding, depolymerisation, incineration, biodegradable polymers. Polymer Degradation, Definition, types, different factors affecting polymer degradation, stabilizers etc.

Learning Outcomes: After completing the course the students will understand

- the basic concept of monomers, polymers, structure, properties and classifications of polymers by origin, processing, mechanism
- different techniques of polymerization methods and
- the properties and application of common polymeric materials used in leather products and footwear manufacturing.

Reference Books:

PSE-102: Polymer Science and Engineering Lab

Credit	Class/week (h)	Total Class (h)
1.5	3/Group	45.0/Group

Learning Objectives: This course will make the students skilled about

- Synthesis of different types of polymer
- Identification of different types of polymeric materials and their characterization.
- Viscosity determination polymer etc.
- Application of polymer in leather products manufacturing.

Course Contents:

1. Identification of polymers use in leather, footwear and leather products manufacturing.
2. Determination of chemical compositions of selected polymers.
3. Determination of ionic character of selected polymers and surfactants.
4. Determination of viscosity of acrylic, polyurethane, butadiene binders.
5. Determination of electrolyte stability of acrylic, polyurethane, butadiene binders.
6. Determination of solvent stability of acrylic, polyurethane, butadiene binders
7. Determination of film hardness of acrylic, polyurethane, butadiene binders.
8. Determination of adhesive strength of acrylic, polyurethane, butadiene binders.
9. Determination of tensile strength and elongation of the finish film formation by acrylic, polyurethane, butadiene binders
10. Determination of ironing effect of acrylic, polyurethane, butadiene binders
11. Determination of flexibility of finish film based on acrylic, polyurethane, butadiene binders.
12. Determination of water resistance of finish film based on acrylic, polyurethane, butadiene binders, silicones-based compounds and nitrocellulose-based compounds
13. Chromatographic analysis of plasticizer.

Learning Outcomes: After completion of this course students will be able to

- Identify leather, adhesives, fibers, rubbers and plastics
- Synthesis of different types of polymer and their characterization
- Apply knowledge to find out the application of polymer in leather products manufacturing.
- Determine the viscosity of polymer.
- Application of polymer in leather products manufacturing.

Reference Books:

10. Finar I. L. - Organic Chemistry Volume-II

Second Year (1st Semester)**LE-201: Leather Processing-II (Mineral)**

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives:

- To know the mechanism of mineral tannage
- To get idea about various salts used in mineral tannage
- To understand the mechanism of chrome tanning
- To learn about different kind of mineral tannage

Course Contents:

Theory and behaviour of group elements: Werners co-ordination theory, behaviour of group elements, chromium, aluminium, zirconium, iron, titanium, difference between salts of these elements.

Tanning: Basic concept, theoretical background, tanning potentials of various metals, non-metals, natural and synthetic materials, tanning characteristics, hydrothermal stability and shrinkage temperatures of various tanning materials.

Chrome Tanning: Chromium complexes and their structures, study on the phenomena of hydrolysis, olation, oxolation, polymerisation of chrome complexes, masking principle of masking, effect of masking on chrome tannage, Method of chrome tannage, preparation of chrome liquors and powders, influence of reducing agent on nature of chrome complexes mechanism of chrome tanning, variable parameters of chrome tanning.

Emission in chrome tanning, environmental impact in chrome tanning, chrome balance in leather manufacturing; optimization of the process parameters, high exhaustion-modification of the tanning process, direct chrome recycling, chrome recovery and reuse, recovery without reuse, chrome-free leather, wet-white concept, chrome free leather-other mineral tannages.

Aluminium Tanning: Tanning behaviour of salts of aluminium, study on phenomena of olation, oxolation and masking in aluminium salts, mechanism of aluminium tannage.

Zirconium Tanning: Tanning behaviour of salts of Zirconium, factors affecting Zirconium Tannage, mechanism of zirconium tannage, Tanning behaviour of salts of Iron and Titanium, Tannages involving the use of Sodium silicate and poly phosphates.

Other tanning Operations: Titanium tanning, Iron tanning

Learning Outcomes:

After completing this course students will be able to gather knowledge about mineral tannage and they can learn how to use various salt in mineral tannage to produce quality leather.

LE-202: Leather Processing-II Lab

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0 /Group

Learning Objectives: The aims of this course are to:

- Introduce students to quantitative & qualitative methods for conducting meaningful inquiry and practical.
- Enhance the students' ability to analyze and critically evaluate the issues of practical in the realm of leather manufacturing engineering.
- Enhance knowledge and skills of student for designing and conducting an academic practical independently.

Course Contents:

1. Manufacturing of Shoe upper leather.
2. Manufacturing of lining leather
3. Manufacturing of semi chrome leather
4. Manufacturing of shrunken grain leather
5. Manufacturing of Fur skin leather.
6. Manufacturing of Screen/block printed leather.
7. Manufacturing of Glaze kid leather.
8. Manufacturing of Nubuck leather.
9. Manufacturing of Nappa leather/ suede leather.
10. Manufacturing full vegetable natural crust leather.

Learning Outcomes: At the end of the course the students will be able to:

- Display familiarity with a broad array of methods and approaches that are used within the industry.
- Demonstrate practical competence in critical thinking by presenting and evaluating arguments in an academic fashion.
- Develop a manufacturing hypothesis and frame the manufacturing problem with the correct methodology.
- Know how to write a process recipe using mixed methods of practical
- Apply practical mythological tools and techniques for conducting research & development in the areas of leather engineering.

LE-203: Leather Biotechnology

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives: The learning objectives of this course are:

- To familiarize the students with those concepts that are basic to prepare of specimen for sectioning, free hand sectioning, paraffin embedding method, freezing method, staining techniques.
- To understand the bacteriology and mycology.
- To provide knowledge in Biocides, Fungicides and Insecticides.
- To develop biological processes of waste treatment to reduce the impact of pollution.
- To know about merits and demerits of different methods of sterilization.

Course Contents:

Histology of hides, skins and leather: Preparation of specimen for sectioning, different method of sectioning; methods for staining, stock solutions for staining; mounting techniques, quick test for defect identification.

Bacteriology: Bacteria and its morphology, functions of bacteria, biological needs of bacteria, nomenclature, classification, structure, nutritional requirements; growth of an organism in a medium; infection and immunity, dissociation and association of bacteria; different methods of staining of bacteria.

Mycology: Introduction, spores and its types; classification of moulds, morphology of moulds, biochemistry of moulds, laboratory technique for the study of mould; microbiological problems of leather industry and their remedy.

Biocides, Fungicides and Insecticides: Biocides- definition, classification and chemistry of bactericides, fungicides and insecticides; diseases and defects on hides, skins and leather caused by bacteria, insects and moulds with their remedy; application of bactericides, fungicides and insecticides in leather industry.

Control of microorganism: General principles of microbial control, control of undesirable microorganisms by physical means, chemical disinfectants and their use; sterilization and its kinds, method and means of sterilization, merits and demerits of different methods of sterilization; cause of sterilization failure; pasteurization.

Microbial fermentation: Methods of microbial fermentation, types of fermentations, fermentation equipment; preparation of media, preparation of inoculums, separation and purification of products.

Enzymology: Enzyme in leather industry; microbial cells in leather and allied industries; principle of industrial enzymology, enzyme activity; source of enzyme, selection of micro-organisms, mechanism of enzyme biosynthesis, manipulation of enzyme biosynthesis; particular technical enzyme preparation of amylolytic, cellulose, proteolytic, lactase, proteases, lipases, glucose oxidase, catalase, glucose isomase enzymes.

Learning Outcomes: After completion of this unit the students will able to:

- Familiarize the students with those concepts that are basic to prepare of specimen for sectioning, free hand sectioning, paraffin embedding method, freezing method, staining techniques.
- Understand the bacteriology and mycology.
- Provide knowledge in Biocides, Fungicides and Insecticides.
- Conduct different biological processes of waste treatment to reduce the impact of pollution.
- Learn about merits and demerits of different methods of sterilization.
- Evaluate and interpret quantitative data using the scientific method
- Able to practice safety and proper techniques in the laboratory

LE-204: Leather Biotechnology Lab

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0/Group

Learning Objectives: The learning objectives of this course are:

- To familiarize the students with the basic of comparative microscopic study of Cow hides /Buffalo hides /Goat skin/Sheep skin at liming, bating, tanning and finishing stages.

- To practice counting of bacteria in raw hides and skins, tape water, drain water, soak liquor, bate liquor and tannery drain liquor.
- To isolate and identify of moulds in pelts, wet-blue, and vegetable tanned and finished leathers, stored leather, and shoe and leather goods.
- To provide knowledge in Biocides, Fungicides and Insecticides.
- To develop biological processes of waste treatment to reduce the impact of pollution.
- To prepare glue and gelatin from hides and skins/fleshing/ bones,
- To produce of neat's foot oil from hooves.
- To produce of Sausage casing from spleens. Stomach, etc.
- To manufacture of musical string from stomach.
- To produce of protein binder from blood.
- To develop of blood meal for poultry.
- To produce of different enzymes from slaughterhouse by- products.
- To determine of degree of activity of enzyme.

Course Contents:

1. Section cutting, staining and mounting of samples.
2. Microscopic study of leather defects due to moulds/ insect/bacteria/fungi.
3. Comparative microscopic study of Cow hides /Buffalo hides /Goat skin/Sheep skin at liming, bating, tanning and finishing stages.
4. Cultivation, isolation, staining and identification of bacteria.
5. Counting of bacteria in raw hides and skins, tape water, drain water, soak liquor, bate liquor and tannery drain liquor.
6. Isolation and identification of moulds in pelts, wet-blue, and vegetable tanned and finished leathers, stored leather, and shoe and leather goods.
7. Preparation of glue and gelatin from hides and skins/fleshing/ bones.
8. Preparation of Neat's foot oil from hooves.
9. Preparation of Sausage casing from spleens. Stomach, etc.
10. Preparation of musical string from stomach.
11. Preparation of protein binder from blood.
12. Preparation of blood meal for poultry.
13. Preparation of Tallow from hides and skins/ fleshing.
14. Preparation of different enzymes from slaughterhouse by- products.
15. Determination of degree of activity of enzyme.

Learning Outcomes: After completion of this unit the students will able to:

- Familiarize the students with the basic of comparative microscopic study of Cow hides /Buffalo hides /Goat skin/Sheep skin at liming, bating, tanning and finishing stages. Understand the bacteriology and mycology.
- Perform counting of bacteria in raw hides and skins, tape water, drain water, soak liquor, bate liquor and tannery drain liquor.
- Conduct different biological processes of waste treatment to reduce the impact of pollution.
- Prepare glue and gelatin from hides and skins/fleshing/ bones.

- Develop Sausage casing from spleens. Stomach, etc.
- Prepare different enzymes from slaughterhouse by- products.
- Manufacture musical string from stomach, protein binder from blood, blood meal for poultry.
- Determine the degree of activity of enzyme.

MTH-201: Differential Equation and Numerical Methods

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives:

- To introduce the basics of differential equations and terminologies regarding them.
- To solve different types of ordinary differential equations and partial differential equations analytically using well-known techniques.
- To explore the utility of differential equations in modeling numerous physical and biological systems.
- To determine the approximate numerical solutions of mathematical problems that cannot always be solved by conventional analytical techniques.
- To demonstrate the importance of selecting the right numerical technique for a particular application, and carefully analyzing and interpreting the results obtained.

Course Contents:

Ordinary Differential Equation: Definition of Differential Equation, Order and Degree; Classification of Differential Equations; Formulation; Solution of first order differential equation by various methods; Solutions of general linear equations of second and higher order with constant co-efficient; Solutions of homogeneous linear equation.

Modelling with first order differential equations: Construction of differential equations as mathematical models (exponential growth and decay, heating and cooling, mixture of solutions, series circuit, logistic growth, chemical reaction, falling bodies). Model solutions and interpretation of results.

Modelling with second order differential equations: Vibration of a mass on a spring, free and undamped motion; free and damped motion; forced motion; electric circuit problems.

Partial differential equations: Formation of partial differential equations, solution of standard types of first order equation and Lagrange's equation, classification of second order partial differential equations, linear partial differential equations of second order and higher order with constant coefficients.

Solution of Equations and Eigenvalue Problems: Solution of algebraic and transcendental equations – Bisection method - Fixed point iteration method – Newton Raphson method – Iterative methods of Gauss Jacobi and Gauss Seidel - Matrix Inversion by Gauss Jordan method - Eigenvalues of a matrix by Power method.

Interpolation and Approximation: Interpolation with unequal intervals - Lagrange's interpolation – Newton's divided difference interpolation – Newton's forward and backward difference formulae.

Numerical Differentiation and Integration: Approximation of derivatives using interpolation polynomials - Numerical integration using Trapezoidal, Simpson's rule – Evaluation of double integrals by Trapezoidal and Simpson's rules.

Initial and Boundary Value Problems for Differential Equations: Runge-Kutta method for solving first order equations, Milne's and Adams-Bashforth predictor corrector methods for solving first order equations. Finite difference methods for solving two-point linear boundary value problems.

Learning Outcomes:

- Formulate differential equations by removing arbitrary constants from algebraic relations and draw solutions curves using direction field. Construct and analyze graphical displays to summarize data.
- Classify first-order differential equations as separable, homogeneous, linear, exact, Bernoulli's etc. and solve them using appropriate methods.
- Know about higher order differential equations, their classifications and solve them using appropriate methods.
- Find numerical approximations to the roots of an equation by Newton method, Bisection Method, Secant Method, etc.
- Find numerical solution to a system of linear equations by Gaussian Elimination and backward substitution.
- Demonstrate the use of interpolation methods to find intermediate values for any given set of points.

CHM-201: Analytical Chemistry for Leather and Leather Products

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives: The major objectives of this course are to:

- Acquire fundamental knowledge one errors and statistics, gravimetric and volumetric methods chromatographic technics analytical spectrometry, chemical analysis of leather and related chemicals, environmental analysis, laboratory automation and safety practice in laboratory.
- The course gives an overview of important use of selected classical and instrumental chemical quantitative analytical methods in leather manufacturing and a short introduction to their basic theory.

Course Contents:

Introduction: Evaluation of analytical results, units in measurements, uncertainty in measurement, accuracy and precision, Selectivity, Sensitivity, Specificity of chemical reaction, errors, minimization of errors, significant figure and computation, rejection of data-the Q test. Sampling.

Gravimetric and volumetric methods: Principles of gravimetric methods, conditions for precipitation co-precipitation and post-precipitation, precipitation from homogeneous solution. Principles of volumetric analysis, complexometric titration.

Chromatographic techniques: Introduction, principles, classification of chromatographic methods, partition and adsorption chromatography, instrumentation and application of paper, thin layer chromatography (TLC) and column chromatography.

Ultraviolet-Visible spectrometry: Introduction, principle, absorption laws, deviation from Beer's Law, instrumentation, principles, applications, molar extinction coefficient, measuring unknown concentration, absorbing species, absorption spectrum and λ_{\max} , shifting of λ_{\max} , solvent polarity effect on λ_{\max} , Woodward-Fieser rules for λ_{\max} calculation, application of transmission spectrophotometry to dyes.

Chemical analysis of leather and related chemicals: Tanning materials- Routine analysis of vegetable, analysis of chrome extract: Cr_2O_3 , basicity.

Analysis of leather: moisture content, fats content, ash content, nitrogen and hide substance, degree of tannage, pH of leather sample, analysis of chrome tanned leather, alum tanned leather; formaldehyde tanned leather; Leather auxiliaries: casein, shellac, oils, fats, waxes, acid value, saponification value, iodine value, unsaponifiable matter; determination of sulphide in alkaline liquors, determination of hydroxyproline in materials containing collagen.

Environmental analysis: Sampling procedures of waste water for analysis. Analysis of tannery wastewater sample: alkalinity, acidity, total solids, dissolved solids, suspended solids, sulphate, sulphide, chromium, settle able solid, banned amines, Identification of

carcinogenic amine from a mixture of dyes, identification of benzidine-based dye.

Laboratory automation: Introduction, approaches to laboratory automation, principles of automation, planning for laboratory automation, automated instruments, microprocessor-controlled instruments: "smart" instruments, computers in analytical chemistry.

Safety practice in laboratory: Introduction, MAK values of working material that involved health hazard, list of harmful materials, carcinogenic working materials, emission protection law, danger symbols, regulations concerning the transportation of materials classified as dangerous goods, prevention of accidents and first aid in laboratory, hazard and hazard agents identification, hazard classification, hazard control, safety management, safety promotion and awareness creation, safety and emergency provisions.

Learning Outcomes: On completing this course:

- The students will have a theoretical and practical understanding of advanced analytical instruments.
- They will be able to analyze leather and leather related chemicals.
- They will be able to assess the quality of leather, footwear and leather products.
- They will be able to work in environmental research.

Reference Books:

1. Gary D. Christian- Analytical Chemistry
2. John Kenkel- Analytical Chemistry for Technicians
3. Skoog, West and Holler- Fundamental of Analytical Chemistry

5. Hatakeyama T. and Quinn F.X. - Thermal analysis.
6. Vogel A. I. - Text Book of Quantitative Chemical Analysis
7. P. K. Sarker - Analytical Chemistry for Leather Manufacture.
8. Dr. Sethi P.D. - High Performance Liquid Chromatography.
9. Hamilton, Hamiltan-Thin Layer Chromatography.
10. Fifield and Haines-Environmental Analytical Chemistry.
11. UNIDO- Tannery and Environment.

CHM-202: Analytical Chemistry Lab

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0/Group

Learning Objectives: The learning objectives of this course are:

- To apply practical knowledge in analytical chemistry.
- To introduce the fundamental knowledge and skill of different tests in determining moisture content, fat content, acid value pH in leather and leather chemicals.
- To determine toxic metals and other toxic chemicals both in leather and tannery effluents.

Course Contents:

1. Determination of moisture content and pH in synthetic tanning materials.
2. Determination of acid value in supplied samples.
3. Determination of Iron in vegetable tanning extracts.
4. Determination of Chromium in vegetable tanning extracts.

5. Determination of Chromium in chrome tanning extracts.
6. Determination of chloride in alkaline tannery waste water.
7. Determination of hydroxyproline in collagen containing materials.
8. Determination of fat and other soluble substances in shoe upper leather.
9. Determination of originally combined SO₃ existing as neutralized sulphuric ester.
10. Determination of total free fatty acids: qualitative identification of surface-active groups.

Learning Outcomes: Upon completion of this course the students will be able to

- Analyze leather chemicals.
- Find out the amount of unused chemicals in tannery waste.
- Interpret different analytical quantitative experimental knowledge and skill to determine moisture content/pH in leather and in synthetic tanning materials.
- Learn the concentration of Cr, Fe in tannery waste liquor.

Reference Books:

1. Gary D. Christian- Analytical Chemistry
2. John Kenkel- Analytical Chemistry for Technicians
3. Vogel A. I. - Text Book of Quantitative Chemical Analysis
4. Sarker P.K. - Analytical Chemistry for Leather Manufacture.

EEE-201: Fundamentals of Electrical and Electronics Engineering

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives:

- Understand the fundamentals of electronics within the field of electrical engineering.
- Understand diode circuits and models.
- Know how to use and analyze distribution circuits, cables and wiring systems
- Analyze amplifier circuits with feedback.
- Design electronic circuits for sensors

Course Contents:

Electrical Engineering: D.C. Current: D.C. fundamentals, Network Theorems, Generators and their characteristics, Motors and their characteristics, Speed control process.

A.C. Current: A.C. fundamentals, Flow of A.C. through inductance, capacitance and resistance Flow of A.C. through inductance, resistance and capacitance in series and in parallel, Power in A.C. Circuit, Power Factor and Power Factor Improvement, Resonance in AC circuits, Transformer, Poly phase circuits, Induction motors. Its types and purpose. Sub-station equipment (HT, LT Switch gear etc.), Distribution board and sub-distribution board.

System network: Typical distribution circuits, cables and wiring systems and their selection. System protection: Types of faults, (transformer and motor) principles of protection, Protective devices-circuit breaker, Switches, starter etc.

Electrical hazards: Protection against shock and fire, earthing and its importance, procedure to be adopted when a person is in contact with a live conductor.

Electronics: Semiconductor physics, Diodes and their uses, Rectifiers, Transistors, Amplifiers, Voltage amplification, Power amplification, Photo sensor and Transducer, Integrated Circuit.

Learning Outcomes:

- Conduct standard tests and measurements, and to conduct, analyze, and interpret experiments related to electrical engineering technology.
- Recognize a variety of exciting high-tech products and systems enabled by electronics.
- Manipulate voltages, currents and resistances in electronic circuits.
- Demonstrate familiarity with basic electronic components and use them to design simple electronic circuits.

Reference Books:

1. A Textbook of Electrical Technology (vol: I & II), B. L. Theraja
2. Alternating Current Circuit, George F. Corkoran
3. Principles of Electronics, V.K. Mehta
4. Power System, V.K. Mehta

PHY-201: Physics and Electronics Lab

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0/Group

Learning Objectives: The Objective of this course is to provide a broad training in Physics and Electronics principles with laboratory experiments. Demonstrate the students on various skills including; expertise with core physics concepts and basic electronic principles and their applications. This course will help the students to relate the physical phenomenon with the practical problems in engineering purposes, proficiency in measurements and dimensioning, critical thinking and data analysis. In future, it will help the students to function effectively in laboratory environment and conduct independent research towards the development of new devices and products using sophisticated physical concepts.

Course Contents:

Part A: Physics

1. Determination of the value Y , η and σ for the material of a given wire by Searle's apparatus.
2. Determination of the modulus of rigidity of a cylindrical wire by dynamic method.
3. Determination of the thermal conductivity of bad conductor by Lee's method.
4. Determination of the specific heat of a liquid by the method of cooling.
5. Determination of the value of "g" by Kater's reversible pendulum.
6. Determination of the wavelength of sodium light by Newton's ring.
7. Verification of Ohm's law and measurement of low resistance by ammeter and voltmeter.

8. Determination of the refractive index of a material of a given prism by a spectrometer.
9. Determination of the grating constant of a plane diffraction grating.
10. Determination of the optical rotation of sugar solution (at six different concentrations) with the help of a polarimeter.

Part B: Electronics

1. Verification of KCL and KVL.
2. Verification of Norton's and Thevenin's theorem.
3. Study the characteristic of a general purpose and Zener diode.
4. Study the characteristic of a transistor in CB configuration.
5. Study the characteristic of a transistor in CE configuration.
6. Study the characteristic of a single stage amplifier.
7. Study the basic characteristic of logic gates.
8. Study the basic characteristic of SCR and TRIAC.
9. Study the basic operation of different sensors and Transducers.
10. Study the basic operation of Microprocessors.

Learning Outcomes: Successful completion of this course will help students with following outcomes:

- Work efficiently in leather, leather products, and footwear industries where proper application of engineering knowledge requires the basics of physics and electronics.
- Design and conduct experiments, as well as to analyze and interpret data.
- Communicate their ideas with others and function effectively in multidisciplinary terms.
- Start career as a practicing engineer in fields such as design, research, development, testing, manufacturing, operations, and service systems.
- Continue to learn through advance study or engagement in professional development activities within physics, electrical engineering or other technical fields.

Reference Books:

1. David Halliday/Robert Resnick/Jearl Walker-Fundamentals of Physics.
2. F.W.Newman and V.H.L.Searl -The General properties of Matter
3. D.S.Mathur- Elements of Properties of Matter
4. Paul D. Malvino - Electronic principles.
5. F.Sears and G.L. Salinger -Thermodynamics, Kinetic Theory and Statistical Thermodynamics
6. S.C.Arora/S. Domkundwar-A Course in Heat & Mass Transfer.
7. Harvey E.White/Francis A. Jenkins-Fundamentals of Optics.
8. V. K. Mehta- Principles of Electrical Engineering and Electronics.
9. B.L. Therera and A.K. Therera - Solid State Electronics

Second Year (2nd Semester)

LE-205: Leather Processing-III (Non-Mineral)

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives:

- To know about the stages involved in post-tanning
- To get idea about mechanical operation before wet finishing
- To comprehend the significance of neutralization in post-tanning
- To know about non mineral tannins and tanning process.
- To learn the process of fatliquoring and re-chroming
- To know about combination tannage

Course Contents:

Mechanical Operations prior to post tanning: sammying, splitting, shaving, weighting.

Wetback and washing: Objects, use of surface-active agents, acidification, rinsing.

Bleaching: Different methods of leather bleaching, factors effecting bleaching. Bleaching of vegetable and chrome-tanned leather, effect of bleaching on leather quality.

Re-chroming: Objects, chrome syntan, use of basic chrome sulphate, chrome syntan, chrome stable fat liquor, glutaraldehyde etc. in re-chroming, controls during re-chroming.

Neutralization: Objects, iso-electrical points and neutralization, principles of neutralization for chrome tanned leather, factors effecting neutralization, selection of proper neutralizing agents, controls of neutralization, test for neutralization, neutralization and its impact on subsequent leather processing.

Re-tanning and combination tannage: Introduction, objects of re-tanning, types of materials used in re-tanning and semi-chroming, advantages and disadvantages of retanning and combination tannage, factors affecting retanning and combination tannage.

Vegetable tannins and tanning: classification of vegetable tannins, physico-chemical properties of vegetable tannin, vegetable tanning materials and their properties, leaching of vegetable tanning and general methods of tannin extract preparation, Mechanism of vegetable tanning, Principle of vegetable tanning, sources, supply of vegetable tanning, mechanism of vegetable tanning, factors affecting vegetable tannage, process of vegetable tanning, manufacturing process of different vegetables tanning, pollution load of vegetable tanning, cleaner method of vegetable tanning.

Synthetic tannins: Introduction, classification, general chemistry of syntans; their classification, general methods of manufacture properties and use of different types of syntans in leather manufacture, mechanism of tanning with syntans, collagen-syntan interaction, effect of syntan on dyeing and retaining auxiliaries, environmental aspects, cleaner processing.

Aldehyde tannage: Concept of aldehyde tanning, mechanism of aldehyde tanning, environmental aspects, cleaner processing, different aldehydes used for tanning, factors involved in tannages, properties of leather tanned with different aldehydes.

Oil tanning: Objectives, theory of oil tanning, application of oil tanning for the production of chamois leather, conditions for oil tanning, environmental aspects, cleaner processing.

Dyeing and Fat-liquoring: Leather dyes and their application, factors affecting dyeing process, dyeing defects. Fat liquoring: objectives, classification of fat liquor, natural and synthetic fatliquors, theory and mechanism of fatliquors, theory and behavior of emulsions, emulsifiers, stability of emulsion, application of fat liquors, distribution of fat and oils in leather, controls of fat liquoring, effects of fatliquors on physical properties, fatliquors used in water repellent leather, modern trends in fatliquoring, curring and stuffing using fats and oils.

Mechanical and manual operations of re-tanned leather: Objectives of Setting out, Vacuum drying, Tunnel/overhead drying, Vibrating staking, Toggle drying, Trimming, Dry vacuum.

Finishing: Definition, Classification of finishes, Structure of finishes, Materials for leather finishing, Theory of film formation Preparation of leather for finishing-buffing, snuffing, de-dusting, flesh coating, staining/color impression, ground coating, season coating, top coating, ironing, glazing, plating, selection.

Finishing techniques: Shoe upper leather, nappa leather, glaze kid leather, nubuck leather, suede leather, patent leather, corrected grain leather, pull-up leather, clothing leather

Learning Outcomes: After completing this course students will be able to

- understand the necessity of post-tanning processes
- know about non mineral tannins and tanning process
- manufacture different types of leather

LE-206: Leather Processing-III Lab

Credit	Class/week (h)	Total Class (h)
1.5	3.0 /Group	45.0/Group

Learning Objectives: The aim of this course is to:

- Introduce students to quantitative & qualities methods for conducting meaningful inquiry and practical.
- Enhance the students' ability to analyze and critically evaluate the issues of practical in the realm of leather manufacturing engineering.
- Enhance knowledge and skills of student for designing and conducting an academic practical independently.

Course Contents:

1. Manufacturing of corrected grain finish leather
2. Manufacturing of glaze/plate finish leather
3. Manufacturing of Embossed finish leather
4. Manufacturing of spray finish leather
5. Manufacturing of curtain coating finish leather
6. Manufacturing of Roll coating finish leather

Learning Outcomes: At the end of the course the students will be able to:

- Display familiarity with a broad array of methods and approaches that are used within the industry.
- Demonstrate practical competence in critical thinking by presenting and evaluating arguments in an academic fashion.
- Develop a manufacturing hypothesis and frame the manufacturing problem with the correct methodology.
- Know how to write a process recipe using mixed methods of practical.
- Apply practical mythological tools and techniques for conducting research & development in the areas of leather engineering.

Reference Books:

1. Dutta S.S.-An introduction to the principles of leather manufacture.
2. Krystof Bienkiewicz - Physical chemistry of leather making.

10. Mclaughlin.George D. - The Chemistry of Leather Manufacture.
11. Gustavson K.H.- The Chemistry of Tanning Processes.

FE-201: Footwear Preparatory Process

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives: The objectives of this course are as follows:

- To provide an overview of different cutting machineries.
- To provide knowledge about principles of leather cutting.
- To disseminate knowledge about the preparatory operations of shoe upper assembling.
- To introduce students about toe post sandals' construction.

Course Contents:

Cutting types and machineries: Cutting types, clicking machine- types, parts, function and setting for operation. Types of clicking/press knives, die making process.

Materials cutting: Upper materials used in footwear manufacture, assessment of materials, parts of leather, leather area measurement and identification of leather defects, grading and sorting of leather, calculation of material consumption by pattern, area discrepancy, net coefficient of leather, true price, job sheet, environmental factors in cutting, storage of knives, press cutting process for different footwear materials, clicking faults and remedies, clicking house management, modern cutting techniques.

Preparation for closing: Preparatory operations, types of preparatory operations, Skiving-Importance and types of skiving, skiving faults and remedies, skiving machine- types, parts, function and setting for operation, process and safety practice for skiving operation. Stitch marking- Reasons of stitch marking, methods of stitch marking cleaning, faults of stitch marking. Edge folding- Importance, types and process of edge folding, edge folding machine- parts, function and setting for operation, edge folding faults and remedies, safety practice for edge folding operation. ID marking- Reasons and methods for ID marking. Splitting, 3D printing, embossing, lamination, screen printing etc.

Upper pre-forming: Purpose of upper performing, types of upper pre-forming- blocking etc. conditioning, trimming to shape, forepart moulding, faults and remedies of upper pre-forming.

Edge and topline treatments: Importance and making process of raw edge, edge inked, burnished, U-bound, folded edge, French-bound, bagged, etc. used in footwear manufacture. Faults of edge and topline treatments.

Straps: Function and purposes of straps used in sandal/footwear, strap performance to avoid failure and injury, types of strap fastening, elasticated straps, strap positioning, strap attaching to the upper, sole/insole.

Learning Outcomes: Upon completion of this course students will be able-

- To know about different types clicking machines for footwear materials cutting.
- To know about different types of leather defects.
- To know about efficient leather cutting procedures.
- To learn how to prepare upper in closing department.
- To know about the toe post sandals' features and construction.

Reference Books:

1. Martin, Shoben, Janet P. Ward – Pattern Cutting and Making Up
2. Swayam Siddha – The Art of Cutting Kid and Goat Skin
3. SwayamSiddha- The Art of Cutting a Buffalo Leather
4. Swayam Siddha – The Art of Cutting Corrected Grain Leather
5. Venkatappaiah B.- Introduction to The Modern Footwear Technology-
6. Miller R. G. (Editor) – Manual of Shoe Making
7. Korn J. (Editor) – Boot and Shoe Production
8. Thornton J. H.- Text Book of Footwear Manufacture

FE-202: Footwear Preparatory Process Lab

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0/Group

Learning Objectives: Specific objectives of this course are as follows:

- To understand necessary patterns for sandal and derby shoe manufacture.
- To understand about last for footwear manufacture.
- To make sandal and derby shoe.
- To identify defects of sandal and derby shoe.
- To understand about shoe packaging.

Course Contents:

Identification of foot bones: Identification of foot bones, from skeleton and model.

Identification of footwear upper and bottom parts: Identification of footwear upper and bottom parts- upper, toe cap, vamp, quarter, counter, lining, toe puff, stiffener, heel grip, thread, eyelet, insock, insole, mid sole, sole, shank, bottom filler, heel, heel block etc.

Identification of footwear: Identification of different types of footwear such as oxford, derby, moccasin, sandal, boot, sports, safety footwear etc.

Identification of footwear materials: Identification of footwear materials- upper leather, synthetic, fabrics, lining leather, insole material, different soling material- leather, PVC, PU vulcanized rubber, TPR, EVA, resin rubber, etc.

Hand cutting practice: Identification of hand cutting tools for footwear materials and components cutting. Cutting exercise with paper, synthetic and leather materials by hand cutting method.

Footwear manufacture: Demonstration of footwear manufacture from cutting to packaging.

Machine cutting practice: Identification of different parts of clicking machine and setting up of different types of clicking machines. Identification of different types of clicking knives and clicking machine. Machine cutting practice with paper, synthetic and leather materials.

Practice for preparatory operations of closing: Exercise of skiving, stitchmarking, edge folding, ID marking, splitting, pre-forming etc for closing operation.

Practice for stitching: Hand stitching practice for lock stitching, chain stitching, zig-zag stitching. Machine stitching practice- identification of various sewing machines and their parts and functions, identification of sewing needle, sewing exercise with paper without thread, practice of threading system for different types of sewing machines, sewing exercise with synthetic material and thread, sewing exercise with leather and thread. Identification of different types of seam. Practice for construction of different types of seams- lapped seam, closed seam, open seam, butted seam, moccasin seam, etc.

Cutting and preparatory exercise: Cutting and preparatory exercise for Sandal and Derby shoe manufacture.

Manufacture of Sandal and Derby shoe: Selection of last and pattern/knife for sandal and Derby shoe manufacture, cutting of upper, lining and other materials according to patter/knife, upper preparation for closing, closing operation, lasting, heat setting, roughing and scouring of lasted upper, sole making and sole preparation, sole attaching and delasting.

Learning Outcomes: Upon completion of this course students will be able-

- To manufacture a pair of sandal.
- To manufacture a pair of Derby shoe.
- To polish manufactured shoes.
- To manufacture shoe packaging box.

Reference Books:

1. Central Footwear Training Institute – ABC of shoe designing
2. Martin, Shoben, Janet P. Ward - Pattern Cutting and Making Up
3. Swayam Siddha - The Art of Cutting Kid and Goat Skin
4. Venkatappaiah B.- Introduction to The Modern Footwear Technology
5. Miller R. G. (Editor) - Manual of Shoe Making
6. Korn J. (Editor) - Boot and Shoe Production
7. Thornton J. H. - Text Book of Footwear Manufacture
8. SATRA Bulletin
9. Spencer Crookenden - K Shoes -The first 150 years 1842-1992

CHM-203: Instrumental Analysis of Leather and Leather Products

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives: The objectives of this course are to provide:

- An introduction to analytical chemistry for leather and leather products manufacture and an overview of important analytical methods and their range of application in leather within detection of inorganic, organic and other toxic compounds.
- Important analytical quantitative techniques from classical methods, electrochemical methods, spectrochemical/spectrophotometric methods, and separation techniques are reviewed.
- The course also includes risk assessment of chemical experiments, important steps and procedures in analytical chemistry, and evaluation/interpretation of results.
- The course gives an overview of important use of selected classical and instrumental chemical quantitative analytical methods leather product manufacturing and a short introduction to their basic theory.

Course Contents:

Gas chromatography: Introduction, classification, principles of gas-liquid chromatography, gas-solid chromatography, techniques of gas-liquid chromatography, carrier gas, sample injector, gas chromatograph columns and detectors: different types of detectors- thermal conductivity detector (TCD), flame ionization detector (FID), electron capture detector (ECD), nitrogen/phosphorus detector (NPD), qualitative and quantitative, Application of gas-liquid chromatography in leather industries.

High-Performance liquid chromatography: Basic concept, comparison of HPLC with gas-liquid chromatography, apparatus for HPLC, solvent delivery, sample injector, selection of column Different detectors: - UV and RI detectors, Qualitative and quantitative analysis, effect of temperature in HPLC, application of HPLC.

Thermal techniques: Basic principles of Differential thermal analysis (DTA), Differential scanning calorimetry (DSC), Thermogravimetry (TG), application in leather science.

Infrared spectrometry: Basic principles of IR, Types of vibrations, characteristics regions of the spectrum, the parameters determining the position and intensity of bands, experimental technique, characteristic absorption bands and functional groups, Influence of substituent, polarity, ring size, hydrogen bonding, conjugation, application of IR spectrum for chemical

analysis.

Nuclear magnetic resonance spectrometry: Fundamental theory, NMR active nucleus, instrumentation, solvents, chemical shift and factors affecting chemical shift, application of ^1H -NMR, application of ^1H -NMR spectrum in leather chemical analysis.

Atomic absorption spectrometry: Introduction, basic principles, instrumentation, sample preparation, type of techniques, effect of flame temperature, chemical and spectral interference, recent developments, applications.

Learning Outcomes: Upon completion of this course the students will be able to

- Interpret different analytical quantitative techniques from classical methods, electrochemical methods, spectrochemical / spectrophotometric methods, and separation techniques.
- Learn about risk assessment of chemical experiments, important steps and procedures in analytical chemistry, and evaluation/interpretation of results.
- Understand and use of selected classical and instrumental chemical quantitative analytical methods and a short introduction to their basic theory.

Reference Books:

1. Gary D. Christian- Analytical Chemistry
2. John Kenkel- Analytical Chemistry for Technicians
3. Sharma B. K. - Instrumental Methods of Chemical Analysis
4. Browning D. R. - Chromatography
5. Hatakeyama T. and Quinn F.X. - Thermal analysis.
6. Vogel A. I. - Text Book of Quantitative Chemical Analysis
7. Sarker P.K. - Analytical Chemistry for Leather Manufacture.
8. Williams D. H. and Ian Fleming- Spectroscopic methods in Organic chemistry.
9. Kalsi P.S. - Spectroscopy of organic compounds.
10. Dr. Sethi P.D. - High Performance Liquid Chromatography.
11. Banwell C. N. -Fundamentals of Molecular Spectroscopy.

CHM-204: Chemical Analysis of Leather and Leather Products Lab

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0/Group

Learning Objectives: The learning objectives of this course are:

- To apply practical knowledge in analytical chemistry.
- To introduce the essential experimental knowledge and skill of different tests to determine moisture content, pH in leather and synthetic tanning materials, total fat in sulphated oils.
- To determine Formaldehyde, Azo colorants, phthalates, VOC, aldehyde, Nitrogen Content, preservative, tetrachlorophenol-, trichlorophenol-, dichlorophenol-, monochlorophenol-isomers, ethoxylated alkylphenols and of *N-methyl-2-pyrrolidone (NMP)*.
- To determine total Chromium, Lead, Cadmium and aluminum by Atomic Absorption Spectroscopy (AAS) and Chromium (VI) by UV-VIS spectrophotometer.

Course Contents:

1. Determination of moisture content/pH in finished leather samples.
2. Determination of chloride content in finished leather.
3. Determination of sulfated ash content of finished leather.
4. Determination of acidity of shoe upper and garments leather.
5. Determination of chromic oxide content in finished leather.
6. Determination of collagen content of finished leather.
7. Determination of Formaldehyde content in leather.
8. Determination of Azo colorants (carcinogenic aromatic amines) content in dyed leather.
9. Determination of phthalates content in leather, leather products and *footwear materials*.
10. Determination of VOC & aldehyde emissions.
11. Determination of Nitrogen Content (Kjeldahl) and Hide Substance Content of Leather.
12. Determination of the preservative (TCMTB, PCMC, OPP, OIT) content in leather by liquid chromatography.
13. Determination of tetrachlorophenol-, trichlorophenol-, dichlorophenol-, monochlorophenol-isomers and pentachlorophenol content.
14. Determination of ethoxylated alkylphenols.
15. Chemical determination of *N-methyl-2-pyrrolidone (NMP)* in leather.
16. Determination of total Chromium in leather samples by Atomic Absorption Spectroscopy (AAS).
17. Determination of total Lead and Cadmium in leather samples by Atomic Absorption Spectroscopy (AAS).
18. Photometric determination of Chromium (VI) by UV-VIS spectrophotometer.
19. Determination of thermal behavior of crust leather by TGA.
20. Determination of thermal behavior of finished leather by TGA
21. Determination of thermal behavior of PU, PVC, rubber by TGA.
22. Identification of leather, PU, PVC, rubber by FT-IR.

Learning Outcomes: Upon completion of this course the students will be able to

- Apply practical analytical chemistry knowledge for leather manufacture
- Interpret different analytical quantitative experimental knowledge and skill to determine moisture content/pH in leather and in synthetic tanning materials.
- Determine Formaldehyde, Azo colorants, phthalates, VOC, aldehyde, Nitrogen Content, preservative, tetrachlorophenol-, trichlorophenol-, dichlorophenol-, monochlorophenol-isomers, ethoxylated alkylphenols and of *N-methyl-2-pyrrolidone (NMP)*.
- Learn the concentration of Cr, Pb, Cd and Cr(VI) by spectroscopic method.

Reference Books:

1. Gary D. Christian- Analytical Chemistry
2. John Kenkel- Analytical Chemistry for Technicians
3. Skoog, Holler and Nieman- Principles of Instrumental Analysis
4. Hatakeyama T. and Quinn F.X. - Thermal analysis.

5. Vogel A. I. - Text Book of Quantitative Chemical Analysis
6. Sarker P.K. - Analytical Chemistry for Leather Manufacture.

MTH-202: Probability and Statistics

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives:

- To provide the basic foundations of statistics with applications in real life.
- To provide knowledge on descriptive statistics, correlation, regression, probability, and probability distributions for both continuous and discrete random variable.
- To discuss the theory and how to apply and use the theory for real life problem-solving and inquiry.
- To provide students with hands on experience in using the statistical theory and methods to perform the different statistical analyses and to interpret results.

Course Contents:

Introduction: Historical development of the subject, Collection of data-Primary data and secondary data.

Frequency distribution: Grouped frequency distribution and their presentation in the form of frequency polygon and Histogram.

Measures of central tendency: Mean (a) Arithmetic Mean (b) Geometric Mean, (c) Harmonic Mean, Median (iii) Mode, Their definition, computation, Advantage, Disadvantage and uses.

Measures of dispersion: Absolute measure, (a) Range (b) Mean deviation (c) Quartile deviation (d) standard deviation, Relative measure, Coefficient of variation, their definition, computation and uses.

Moment, skewness and kurtosis: Their definition, computation and uses.

Probability: Simple idea of probability, Different definitions related to probability, Addition law of probability for mutually exclusive and not mutually exclusive events, Multiplication law of probabilities for dependent and independent events, Probability distribution (i) Binomial, (ii) Poisson, (iii) Simple idea about normal distribution and its probability curve.

Estimation: Simple idea about estimation

Correlation and Regression: Correlation-Ideas of correlation, Measurement of correlation. Pearsonian correlation co-efficient, and spearman's Rank correlation co-efficient. Multiple correlations, Regression-Ideas about simple regression, Equation of the regression line, Estimation of the parameters of the regression line.

Test of significance: some definitions related to test of significance

T-test:

(a) Comparison of a sample mean with a known population mean when S.D. is known and when S.D. is not known

(b) Comparison of two samples means when S.D. is known and also when it is unknown, (c) Paired t test, its practical use in Leather/Footwear/Leather Product Industry.

X² test-Simple application and its practical use in Industry.

Sampling: Definition of population, sample, parameter, census etc.

Simple Random Sampling, Stratified random sampling, their definition, computation, use, advantage & disadvantage.

Design of experiment: Basic principles of experimental design, Ideas about CRD, RBD.

Learning Outcomes:

- Demonstrate the ability to apply fundamental concepts in exploratory data analysis.
- Construct and analyze graphical displays to summarize data.
- Compute and interpret measures of center and spread of data
- Calculate, interpret and communicate the correlation coefficient and simple linear regression model.
- Utilize basic concepts of probability including independence and conditional probability to calculate, interpret and communicate event probabilities both for discrete and continuous random variables.
- Determine the appropriate probability distribution based on experiment conditions and assumptions.

Reference Books:

1. An introduction to Statistics and Probability, Dr. Nurul Islam
2. Business Statistics (Fourteenth Edition), Dr. S.P. Gupta & Dr. M.P. Gupta
3. Research Methodology (Methods & Techniques), C.R. Kothar

MSE-201: Fundamentals of Materials Science and Engineering

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives: This course is

- to highlight the students on the properties and behavior of various materials

Course Contents:

Materials: Basic concept of materials science and engineering, classification of materials, materials of the future, smart and intelligent materials, nanotechnology, an overview of material science and engineering and its recent developments.

Mechanical properties of materials: Concept of stress and strain, elastic deformation, stress-strain behavior, elasticity, elastic properties of materials, tensile properties, plastic deformation, tensile properties, true stress and strain, elastic recovery after plastic deformation, compressive, shear, and torsional deformations, hardness. Variability of material properties, design/safety factors, dislocation, characteristics of dislocations, slip, slip systems, generalized creep behavior, stress and temperature effect, viscoelastic deformation.

Thermal and electrical properties of materials: Heat capacity, thermal expansion, materials of importance invar and other low expansion alloys, thermal conductivity and thermal stresses, electrical conduction, semiconductivity, Hall effect, semiconductor devices, electrical conduction in ionic ceramics and in polymers, dielectric behavior, capacitance, field vectors and polarization, types of polarization, polaron, phonons, frequency dependence of the dielectric constant, dielectric strength, dielectric materials, ferroelectricity, piezoelectricity, conducting polymers, polymer electrolytes; interaction between polymer and salts, polymer in salt and salt in polymer electrolytes.

Magnetic properties materials: Basic concepts, diamagnetism, paramagnetism, ferromagnetism, antiferromagnetism and ferrimagnetism. Influence of temperature on magnetic behavior, domains and hysteresis, magnetic anisotropy, soft and hard magnetic materials, magnetic storage, superconductivity.

Optical properties of materials: Light interactions with solids, atomic and electronic interactions, optical properties of metals, optical properties of nonmetals, refraction, reflection, absorption, transmission, color, opacity, and translucency in insulators, applications of optical phenomena, luminescence, materials of importance-light emitting diodes (LED), photoconductivity, lasers, optical fibers in communications; components, step index, graded index optical fiber design, free electron theory, energy bands, charge transport.

Characterization of materials: X-ray diffraction, structure determination from powder patterns, influence of crystal symmetry and multiplicities on powder pattern, limitation of powder methods, neutron diffraction, applications, advantages and disadvantages, electron microscope, electron diffraction applications, transmission electron diffraction applications, transmission electron microscopy (TEM), scanning electron microscopy (SEM), analytical electron microscopy (AEM), thermal analysis such as TGA, DSC, DTA, elemental analysis.

Metals and alloys (Nonferrous and ferrous): Properties and uses, Wrought iron, cast iron, steel, alloy steel, stainless steel. Aluminum and its alloys, copper and its alloys, nickel alloys-properties, uses and composition. Effects of alloying. Heat treatment of steel. Identification of metal. Metal joining. Oxidation and degradation, corrosion and corrosion protection.

Composite materials: Particle-reinforced composites: large-particle composites, dispersion-strengthened composites, fiber-reinforced composites, influence of fiber length, influence of fiber orientation and concentration, the fiber phase, the matrix phase, polymer-matrix composites, metal-matrix composites, ceramic-matrix composites, glass material, phase transition, interpretation of phase diagrams, carbon-carbon composites, processing of fiber-reinforced composites, hybrid composites, structural composites, laminar composites, sandwich panels, materials of importance-nanocomposites in tennis balls, biomaterials and advanced ceramics.

Learning Outcomes: At the end of this course, the students will

- Understand the properties of various materials.
- Have knowledge about the methods to characterize them.
- Aware about the selection criteria of synthetic material for Leather industries

Reference Books:

1. Introduction to Physical Metallurgy, Avner
2. Strength of Materials, Andrew Pytel, Ferdin and L. Singer
3. Strength of Materials, -R.S. Khurmi
4. An Introduction to Metallurgy, A.H. Cottrell
5. Materials Science and Engineering-An Introduction -W. D. Callister Jr.
6. The Science and Engineering of Materials -D. R. Askeland, P. Phulé.
7. Foundations of Materials Science and Engineering -W. F. Smith.
8. Solid State Chemistry and its Applications, 2nd edition- John Wiley & Sons.
9. Solid Polymer Electrolytes -F. M. Gray.
10. Physical Chemistry -P. W. Atkins, J. D. Paula.
11. Ionic Liquids in Polymer Systems -R. D. Rogers, C. S. Brazel.

LE-207: Field Tour

Credit	Class/week (h)	Total Class (h)
1.0	-	-

The students shall have a daylong visit of one relevant industry.

Third Year (1st Semester)**FE-301: Footwear Manufacturing -I**

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives: The objectives of this course are as follows:

- To introduce students to different types of adhesives and mechanisms of adhesion.
- To provide an overview of footwear reinforcement and lining and interlining materials.
- To disseminate knowledge about different types of footwear fasteners and their attachment techniques.

Course Contents:

Adhesives: Mechanism of adhesion, adhesive terminology, classification of adhesive, application methods of adhesive, safety of adhesive using.

Stitch and seam construction: Types of stitch- lock stitch and chain stitch, hand stitching and machine stitching. Sewing machine- types, parts, function, specification, setting and threading for operation, safety practice for sewing machine operation. Thread types, Needle-types, parts and functions, Types of seam used in footwear manufacture – lapped seam, closed seam, open seam, butted seam, moccasin seam, seam etc. Stitching parameters, and SOP (Standard Operational Process).

Reinforcement types and attachment: Importance of reinforcement, types of reinforcement used in footwear upper, attaching process of overall reinforcement, topline reinforcement, reinforcement of seams, local reinforcement, reinforcement of straps and stripping etc. faults and remedies of reinforcement attachments.

Attaching lining and interlinings: Importance of attaching lining and interlining to footwear, procedure of attaching lining and interlinings by latex adhesives, solvent-based adhesives, hot-melt adhesives, pre-coated heat-fusible adhesives, continuous and discontinuous coatings. Faults and remedies of attaching lining and interlining to footwear.

Attaching decorative trims: Types and functions of decorative trims, advantages of decorative trims in footwear, methods of attachment for decorative trims- stapling, stitching, fast-acting adhesives, prongs/lugs and two-part fittings, faults of decorative trims attachment process and remedies.

Fitting zips in high leg boots: Parts and function of zips, correct positioning and attachment process for zips in high leg boots.

Buckles and touch-and-close fasteners: Function of buckles and touch-and-close fasteners, Attachment process of buckle to footwear- stitched attachment, staple attachment, rivet attachment, strap loop attachment, elastic attachment, types of touch-and-close fastener,

attaching process of touch-and-close fastener, faults and remedies of buckles and touch-and-close fastener attachment.

Laces and other fastening: Purposes of laces and other fastening used in footwear, lace fastening systems, attachment of carriers, lace toggles, slide fasteners, choice of slide fasteners, slide fasteners insertion, slide release clasps, press studs, attaching press studs, elastic etc.

Sequence of closing operation for footwear manufacture: Sequence of operation for upper closing for different types of footwear manufacture -oxford, derby, court, sandal etc. by selecting suitable thread and needle. Faults and remedies of upper closing.

Learning Outcomes: Upon completion of this course students will be able-

- To gather knowledge on different types of adhesives and mechanisms of adhesion.
- To learn different pre-forming operations regarding footwear manufacture.
- To know about footwear lining and interlining attachment techniques.
- To attach different types of fasteners of footwear.

Reference Books:

1. Martin, Shoben, Janet P. Ward – Pattern Cutting and Making Up
2. Swayam Siddha – The Art of Cutting Kid and Goat Skin
3. Swayam Siddha - The Art of Cutting a Buffalo Leather
4. Swayam Siddha – The Art of Cutting Corrected Grain Leather
5. Venkatappaiah B.- Introduction to The Modern Footwear Technology-
6. Miller R. G. (Editor) – Manual of Shoe Making
7. Korn J. (Editor) – Boot and Shoe Production
8. Thornton J. H.- Text Book of Footwear Manufacture
9. Spencer Crookenden - K Shoes –The first 150 years 1842-1992
10. Ruth Thomson – Making Shoes
11. Swayam Siddha – Product Knowledge
12. Swayam Siddha – The Skill of Seam Reducing
13. Thornton J. H.-Text Book of Footwear Materials

FE-302: Footwear Manufacturing -I Lab

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0/Group

Learning Objectives: Specific objectives of this course are as follows:

- To provide knowledge about manufacturing of oxford shoe, court shoe and boot.
- To familiar students with different footwear machineries.
- To acquaint students with shoe finishing and packaging stages.

Course Contents:

1. Identification of different types of sewing machine with different parts.
2. Identification of different types of reinforcing materials.
3. Upper closing exercise of Oxford shoe, Court shoe, and Boot manufacture.
4. Manufacture of Oxford shoe, Court shoe and Boot manufacture by selection of last and pattern/knife, cutting of upper, lining and other materials according to patter/knife, upper preparation for closing, closing operation, lasting, heat setting,

roughing and scouring of lasted upper, sole making and sole preparation, sole attaching and delasting.

Learning Outcomes: Upon completion of this course students will be able-

- To learn different types of shoe manufacturing operations.
- To manufacture Oxford shoe, Court shoe, and Boot footwear.
- To operate different footwear machineries.
- To learn finishing and packaging.

Reference Books:

1. Central Footwear Training Institute – ABC of shoe designing
2. Martin, Shoben , Janet P. Ward - Pattern Cutting and Making Up
3. Swayam Siddha - The Art of Cutting Kid and Goat Skin
4. Venkatappaiah B.- Introduction To The Modern Footwear Technology
5. Miller R. G. (Editor) - Manual of Shoe Making
6. Korn J. (Editor) - Boot and Shoe Production
7. Thornton J. H.- Text Book of Footwear Manufacture
8. Spencer Crookenden - K Shoes -The first 150 years 1842-1992

FE-303: Footwear Design and Pattern Making

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives: The objectives of this course are as follows:

- To provide an overview and realistic idea of art, fashion and style related to shoe designing.
- To explore the necessity of mood board, theme board, motif analysis and research and inspiration regarding product development.
- To disseminate knowledge about different types of shoe sizing and fitting systems.
- To provide knowledge about last and pattern making techniques.

Course Contents:

Elements of Design and Fashion Considerations: Basics concepts on art, fashion, and style, Elements and theories of design, Application of the basic elements of design, Ergonomics and interactive scenario of the design elements, Design Criteria through effect of shape, colour, pattern, texture and decorative materials. Life cycle of fashion.

Product development: Product development procedure, color board preparation, mood board, theme board preparation, motif analysis, creativity analysis, logo design, value addition, design process, research and inspiration, cultural value in design.

Foot measurement: Importance of foot measurement, measurement of foot for bespoke footwear, foot surveys, length and width of the foot, device to measure various anatomical parameters of the foot, measurement of the foot plan, girth measurement, width numbering, foot ID, foot fitting, fitting- identification, multi-fittings, Brannock device for foot measurement, measuring with a tape. Foot scanning for measuring foot dimension.

Last: Classification of last, measurement of last, symmetric lasts, custom made last, care of last, storage of last, raw materials used for last manufacturing, last styling and model making,

last milling and manufacturing – wooden and synthetic last, last co-ordination, last features for different styles of footwear.

Shoe sizing and fitting: Shoe size classification- UK shoe sizing, Paris point, American shoe sizing, centimeter scale, Mondo point, comparison among different shoe sizing systems, Standardize shoe sizes, inconsistency of shoe sizing.

Footwear fitting: Importance of fitting, principles of good fit, fitting process, fitting infants, children's and adults' footwear, fitting problem, shoe adjustment in fitting, benefits of high standards of fit.

Product development: Product development procedure, color board preparation, mood board, theme board preparation, motif analysis, creativity analysis, logo design, value addition, design process, research and inspiration, cultural value in design.

Pattern cutting: Last masking techniques, definition of outside and inside forms, mean forms, standard construction, Techniques of pattern cutting for upper and lining- sandal, oxford, derby, court shoe and boot, asymmetrical oxford/derby, pattern cutting technique for bottom components, reinforcement and interlining, pattern cutting techniques.

Grading: Introduction, enlarging and reducing shapes, radial projections, geometric or proportional grade, arithmetic grade, straight grading, restricted grading, coordinated grading, group grading, centre grading, grading exercises by hand, pantograph machine.

Learning Outcomes: Upon completion of this course students will be able-

- To know about art and design in footwear manufacturing.
- To know about footwear fashion & style in footwear manufacturing.
- To know about foot and last in footwear manufacturing.
- To learn about different shoe sizing and fitting systems.
- To know about product development in footwear manufacturing.
- To know about different pattern cutting techniques in footwear manufacturing.

Reference Books:

1. Martin, Shoben , Janet P. Ward - Pattern Cutting and Making Up
2. Swayam Siddha - The Art of Cutting Kid and Goat Skin
3. Venkatappaiah B.- Introduction To The Modern Footwear Technology
4. Miller R. G. (Editor) - Manual of Shoe Making
5. Korn J. (Editor) - Boot and Shoe Production
6. Thornton J. H.- Text Book of Footwear Manufacture
7. SATRA Bulletin
8. Spencer Crookenden - K Shoes -The first 150 years 1842-1992

FE-304: Pattern Design and Engineering-I Lab

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0/Group

Learning Objectives: Specific objectives of this course are as follows.

- To identify different types of shoe lasts.
- To demonstrate shoe last measurement techniques.
- To practice standard and sectional pattern making of different types of footwear.
- To draw patterns of inner and bottom components of footwear.

Course Contents:

1. Last identification and measurement: Identification of last for making different types of footwear such as sandal, shoe, boot, sports shoe, safety footwear, veldtschoen constructed footwear etc. measurement of last.

2. Design and pattern making of the following footwear:

- a) Sandal b) Derby c) Oxford d) Court e) Boot

Activity:

- Select suitable last
- Masking, designing, forme making, mean forme making, standard construction for upper and lining.
- Sectional pattern making for upper and lining and other components of footwear upper part.
- Pattern making for bottom part of the footwear.
- Grading the patterns for different sizes.
- Calculation consumption of materials according to the pattern.
- Quality checks for the patterns and make corrections if necessary.

3. Pattern cutting of inner and bottom components:

- Stiffener / Counter pattern
- Toe puff pattern
- Sock pattern
- Insole pattern
- Sole pattern
- Heel pattern

Learning Outcomes: Upon completion of this course students will be able-

- To know about last identification and measurement techniques.
- To prepare standard and sectional pattern of sandal, derby, oxford, court, and boot footwear.
- To prepare patterns of shoe inner and bottom components.

Reference Books:

- Martin, Shoben, Janet P. Ward - Pattern Cutting and Making Up
- Swayam Siddha - The Art of Cutting Kid and Goat Skin
- Venkatappaiah B.- Introduction to The Modern Footwear Technology
- Miller R. G. (Editor) - Manual of Shoe Making
- Korn J. (Editor) - Boot and Shoe Production
- Thornton J. H.- Text Book of Footwear Manufacture
- SATRA Bulletin
- Spencer Crookenden- K Shoes -The first 150 years 1842-1992

ME-301: Fundamentals of Mechanical Engineering

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives:

- Ability to identify, formulate and solve mechanical engineering problems based on data interpretation, design, experiment and analysis of results.
- Successfully apply fundamental mathematical, scientific, and engineering technology principles in formulating and solving mechanical engineering technology problems;
- Successfully implement theory in one or more core mechanical engineering technology areas of practice in a sustainable manner;
- Ability to work in teams on multi-disciplinary projects in industry and research organizations.
- Ability to self-learn modern engineering tools, techniques, skills and contemporary engineering practice, necessary for engineering work.

Course Contents:

Thermodynamics: Fundamental concepts and definitions, laws of thermodynamics, thermodynamic processes and cycles, introduction to steam generator units, detail study of boiler, vapor power cycles-Ranking, Reheat, internal combustion engines, steam turbines, compressor. Measurements and automatic control mechanism.

Heat transfer: Different modes of heat transfer-conduction, convection, and radiation, one dimensional steady state conduction of heat in solid plane wall, Radiation heat transfer, the laws of black-body radiation, Sources of energy.

Fluid mechanics: Hydraulics properties of fluids, Surface tension and capillary tubes, basic hydrostatic equation, pressure head of a liquid, pressure gauges, flow of fluids, Bernoulli's equation, and equation of continuity. Laminar flow and turbulent flow, head loss due to friction in a pipe, fluid flow measurements.

Pumps- types: characteristics and application of reciprocating and centrifugal pumps.

Learning Outcomes: Upon completion of this course the students will be able to

- to identify, formulate and solve mechanical engineering problems based on data interpretation, design, experiment and analysis of results.
- apply fundamental mathematical, scientific, and engineering technology principles in formulating and solving mechanical engineering technology problems;
- implement theory in one or more core mechanical engineering technology areas of practice in a sustainable manner;
- work in teams on multi-disciplinary projects in industry and research organizations.
- to self-learn modern engineering tools, techniques, skills and contemporary engineering practice, necessary for engineering work.

Reference Books:

- Thermal Engineering, R.S. Khurmi
- Heat Transfer, Holman
- Engineering Thermodynamics, Rogers

ME-302: Mechanical Workshop

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0/Group

Learning Objectives:

- To introduce students to different pipe fittings
- To equip students with steam generating unit, pumps, compressor, power generator, Engines, and Turbines.

Course Contents:

Introduction to different pipe fittings, Study of Steam Generating Unit, Pumps, Compressor, Power Generator, Engines, (petrol, diesel and gas), Turbines.

Learning Outcomes: Upon completion of this course students will be able to

- Learn about different pipe fittings
- Attain practical knowledge on steam generating unit, pumps, compressor, power generator, Engines, and Turbines.

Reference Books:

1. Thermal Engineering, R.S. Khurmi
2. Heat Transfer, Holman
3. Engineering Thermodynamics, Rogers

ENV-301: Environmental Science and Engineering

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives: The learning objectives of this course are to

- Provide the basics about three major types of pollutions (water pollution, air pollution and soil pollution) that degrade the environmental quality poses a serious threat to human health worldwide.
- Inform about the volume, types of discharge, how they pollute the water, air and soil, causing ecological imbalance and the spreading of different kinds of fatal and contagious disease among the workers and other individuals.
- Aware about the health and safety policies developed for the workers to reduce the accidents in the leather products industry and how to use the emergency facilities in case of a problem.

Course Contents:

Concept of Environment: Definition and concept of environment; Types and components of Environment (Lithosphere, Atmosphere, Hydrosphere, Biosphere); Scope and multidisciplinary nature of the subject; Man-environment relationships; Public awareness – Earth Summits, recent conventions on climate change.

Introduction to biodiversity: definition, genetic, species and ecosystem diversity. Bio-amplification of food chain. Sustainable development and significance of sustainable development in environmental related issues.

Air pollution: Introduction, composition of air, sinks of atmospheric gases, chemical reactions occur in different spheres, smog formation in air, major sources of air pollution and impact on the environment, global and modeling climate change, greenhouse gases and greenhouse effect, acid rain and its effect, air pollutant and their characteristics, hazardous air pollutant (HAPs).

Soil pollution: Introduction, sources of soil pollution, detrimental effects of soil pollutants, disease caused by soil pollution, treatment of soil pollutants, control of soil pollution.

Leather and Footwear Industry and environment: Manufacturing process sequences and their environmental implications, major chemical inputs and wastes in cutting, sewing, assembling and finishing.

Waste management: Definition of waste, integrated waste management, waste generation, separation, storage, collection, transformation of solid waste, transfer and transport, disposal water and air pollution control. Purification and reuse of water during leather processing, low float techniques using updated equipment, recycling of individual process liquors. International standard and exposure limits.

Recovery, regeneration, reuse and disposal of wastes: Recovery of residues of effluents, organic materials, dissolved salts, energy, solid waste, recycling of lime /sulphide liquors, dehair, high chrome exhaustion techniques in chrome tanning, chrome recovery and recycling, oil and grease recovery, disposal of effluents.

Biodegradability and biodegradation: Introduction, methods of measuring biodegradation, characteristics of tannery discharges, biological treatment of tannery effluents.

Concept on environmental management and Environmental Management System (EMS); Management of water pollution, Environmental quality measurement (ISO:14000), Implication of Agenda-21; Functions of management--forecasting, planning, organizing, motivating, coordinating, controlling, and communicating, leadership, directing, and decision making.

Environmental Policies and Legislation: Environmental legislations in Bangladesh, environment protection act, air (prevention and control of pollution) act, water (prevention and control of pollution) act, wildlife protection act, forest conservation act, solid and hazardous waste management rules, biomedical waste rules, responsibilities of generators, role and responsibility of pollution control boards.

Learning Outcomes: Upon completion of this course the students will be able to

- Understand the diverse environmental problems, looking at causal linkages between pollution sources, exposure pathways and impacts to environmental quality and human health.
- Know the adverse effect associated with different operations exposure to chemicals, biological and physical hazards, and proper management procedures required for personal safety from potential risks.
- Understand and design the type of effluent treatment plant that is required for treating the wastes for their reuse or safe disposal to the environment.
- Illustrate the safety recommendation and regulations for the workers working in the leather products industries.

Reference Books:

1. Thierry Chambolle-Environment and Tannery
2. DE A.K. - Environmental chemistry
3. Society of Leather Technologists & Chemists - Official Methods of Analysis (1996).
4. UNIDO- Tannery and Enviroment.
5. Chhatwal, G.R.-Environmental Analysis.

6. Mensink Ir. J.S.-Environmental Quick Scan Leather Products.
7. Chhatwal G .R. - Encyclopedia of Environmental Analysis (vol. 1, 2 &3)
8. Fifield & Haines. -Environmental Analytical Chemistry.
9. Environmental Chemistry-B.K. Sharma and H. Kaur.
10. Roy M. Harrison-Pollution causes, Effects, and Control.

ENV-302: Environmental Science and Engineering Lab

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0/Group

Lab based of the content of ENV-301.

HUM-301: Industrial Sociology

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives:

- To obtain sociological knowledge of core areas and substantive topics and the ability to think critically about them
- To introduce students to the basic social processes of society, social institutions and patterns of social behavior.
- To train students to understand and to interpret objectively the role of social processes, social institutions and social interactions in their lives.
- To demonstrate advanced understanding of key linkages between ecosystem and social processes and how they relate to human-nature interactions, and to integrate this understanding with knowledge drawn from their own degree backgrounds.

Course Contents:

Introduction to Sociology: Definition, nature, scope, importance, Social Interactions, Social Groups, Social Institutions.

Culture and Related Concepts: Definition of Culture, Types, Elements, Role of Culture in Organization, Socialization and Personality.

Interpersonal Relations: Interpersonal Behavior, Formation of Personal Attitudes, Language and Communication, Motivations and Emotions, Public Opinion.

Social Stratification: Factors of Social Stratification, Caste and class, Power, Prestige, and Authority, Social Mobility, Migration.

Human Ecology: Ecological Processes, Ecosystem and energy, Ecosystem and Physical Environment, Solid Waste Disposal, Pollution.

Population Dynamics: World Population Growth and Distribution, Population Dynamics in Bangladesh, Causes and Consequences of Urbanization, Population Policy in Bangladesh, Population and Development.

Community Development: Meaning, Scope, and Subject Matter of Community Development, Processes of Community Development, Community Development Programs in Bangladesh, Community Organization and Related Services, Cooperation and Conflict in Community Development.

Deviance and Crime: Crime as a Social and Cultural Phenomenon, Crime and Social Organization, Organized Crime, Culture Based Crime, Economics of Crime.

Sociology of Change and Development: Social Change and Development, Dynamics of Social Change, Role of NGOs in Development, World System and Development, Gender and Development.

Learning Outcomes:

- Explain the major methods and concepts it used in the systematic study of society.
- Describe various social structures in societies and methods and degrees of social stratification.
- Explain the major social groups that function in society, including racial and ethnic groups.
- Explain processes of socialization, and how socialization operates in different societies and cultures.
- Explain major methods of social control, including political and legal systems, and be able to explain the concept of deviance.
- Explain the role of gender in society.
- Describe how the tools of analysis and methods of sociology are applicable to work and involvement in their community.
- Identify and connect basic ideas and terminology found in the study of human ecology.
- Critically evaluate sources of information about human ecology.
- Associate specific relations between science and/or technology and human population growth, and place them in a historical context.

Reference Books:

1. A Text Book of Sociology, Dealey, James Quayle and Ward, Lester, Frank
2. Engineers in Britain: A Sociological Study of the Engineering Dimension, Ian Glover
3. Introduction: Sociology and Engineering, Ian A. Glover, Michael P. Kelly
4. Human Ecology: Basic Concepts for Sustainable Development, Gerald G Marten
5. Allport, G. W. (1985). UThe Historical Background of Modern Social PsychologyU. New York, Random House.
6. Bernard, A. and T. Burgess (2004). USociologyU, Cambridge University Press.
7. DuBrin, A. J. (2007). UHuman Relations: Interpersonal Job Oriented SkillsU. New York, Prentice Hall.

FE-305: Field Tour

Credit	Class/week (h)	Total Class (h)
1.0	-	-

The students shall have a daylong visit of one relevant industry.

Third Year (2nd Semester)**FE-306: Footwear Manufacturing -II**

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives: The objectives of this course are as follows:

- To provide knowledge about toe puff and counter stiffener attachment.
- To introduce students about insole attachment techniques.
- To equip students with back-part moulding and upper conditioning operations.
- To disseminate knowledge about heat setting operations for various upper materials.
- To provide knowledge about different types of sole, adhesives and bonding principles.
- To introduce students about the functions of chiller in footwear manufacture.

Course Contents:

Toe puff and stiffener attaching: Function and types of toe puff and stiffener used in the footwear, attaching system of toe puff and stiffener to the upper- heat activated, hot-melt or print-on, solvent activated, etc. faults and remedies of toe puff and stiffener attachment.

Attaching insoles to last: Importance of insole attaching to last, attaching systems- tacks and staples, unifast system, adhesive attachment, using tape etc. faults and remedies of insole attachment.

Backpart moulding: Function and advantages of backpart moulding in shoe manufacture, different moulding techniques, faults of backpart moulding and remedies.

Upper conditioning: Advantages of upper conditioning before lasting, different methods of upper conditioning- material storage, humidifying rooms, mulling, soaking/sponging/spraying with water, conditioning fluids etc. disadvantages of insufficient conditioning.

Footwear manufacture by flat Lasting: Definition and objects of flat lasting, pre-lasting checks and preparations, correct positioning and fit of components, forepart lasting, side and seat lasting, attaching systems- cement attachment, grindery attachment, basic rules for lasting systems, faults and remedies of flat lasting.

Heat setting: Function of heat setting, process and controlling parameter of heat setting operation for different upper materials, parts of heat setting machine, common problems of heat setting and remedies. Preparation for stuck-on soles:

Soling materials: Functions, compositions, advantages and disadvantages of different types soling materials- leather, PVC, PU, vulcanized rubber, resin rubber, crepe rubber, microcellular rubber, TPR, EVA etc. Jute and wooden sole

Manufacture of Unit sole: Types of moulding-Compression moulding, Injection moulding, Casting, reaction moulding. Materials used in moulded units: PVC, PU (reaction moulded) Rubber (Vulcanised), TPR, EVA. Unit sole manufacture for thermoplastic rubber, polyvinyl chloride by injection moulding method. Unit sole manufacture for polyurethane soling materials by pouring method or injection moulding method. Unit sole manufacture for vulcanized rubber by compression moulding method. Colouring and lacquering of soles:

colouring of units, self-coloured units, colouring techniques- lacquers, Dip application, quality controlling of operations, spray application, hand application, faults and cures.

Preparations of upper and soling materials: Preparations of upper materials- leather, coated leathers, PVC- and PU-coated fabrics, textiles, machinery for upper preparations, preparing soles- leather sole, lacquered soles, PVC, TPR, EVA, crepe rubber, vulcanized rubber soles etc. Roughing and scouring- Differences between roughing and scouring, number of abrasive paper with function, roughing of leather and PU coated fabrics, manual roughing and automatic roughing used in footwear manufacture.

Sole cementing and bonding: Importance of sole attaching, types of sole attaching systems, adhesives used in sole bonding, adhesive primer- types and functions. upper cementing for sole attaching- margin cementing, roller cementing, automatic cementing, hot-melt adhesive application. Sole cementing- overall cementing, margin cementing, spray cementing, drying, drying uppers, heat reactivation, pressing, faults in sole attaching.

Heel attaching: Types and purposes of heel, attachment process of heel to footwear- inside and outside heel attaching method. Considering points in heel attaching- number, length and position of heel pin, pin quality, heel design features and material quality, shank- type, size, position and materials properties, insole thickness and material properties, heel seat area and insole reinforcement. Heel nailing machines-parts, function and operating process.

Chilling and last slipping: Importance of chiller used in footwear production, parts and function of chiller used in footwear production, controlling parameter of chiller, last slipping.

Learning Outcomes: Upon completion of this course students will be able-

- To learn about toe-puff, counter stiffener and insole attaching.
- To know back-part moulding and upper conditioning procedures.
- To gather theoretical knowledge on different footwear constructions' techniques.
- To learn about heat setting operation for distinct upper materials.
- To explore different types of adhesives' bonding techniques.
- To know the functions of chiller in footwear manufacturing.

10. Thornton J. H.-Text Book of Footwear Materials

FE-307: Footwear Manufacturing -II Lab

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0/Group

Learning Objectives: Specific objectives of this course are as follows:

- To manufacture Casual, Mule, Clog and Moccasin shoes.
- To deliver practical knowledge about shoe finishing and packaging processes.
- To manufacture unit sole: TPR, Vulcanized rubber, PVC, Microcellular rubber, and PU.

Course Contents:

1. Manufacture of Casual, Mule, Clog and Moccasin shoes by the following actions:
 - i) Selection and collection of last and all necessary patterns/knives.
 - ii) Cutting of upper, lining and other materials according to pattern/knife.
 - iii) Preparatory all operations such as skiving, stitchmarking, edge folding, ID marking etc.
 - iv) Reinforcement attaching.
 - v) Upper fitting and stitching.
 - vi) Lasting – Toe puff attaching, backpart moulding, upper conditioning, toe, seat and side lasting, heat setting,
 - vii) Upper and sole preparation:
 - viii) Adhesive application and heat reactivation
 - ix) Sole bonding, chilling and delasting
 - x) Shoe finishing and packaging.
2. Manufacture of unit sole by TPR, vulcanized rubber, PVC, microcellular rubber, PU etc.

Learning Outcomes: Upon completion of this course students will be able-

- To produce Casual, Mule, Clog and Moccasin shoes.
- To finish and pack up their manufactured shoes.
- To produce unit sole: TPR, Vulcanized rubber, PVC, Microcellular rubber, and PU.

Reference Books:

1. Central Footwear Training Institute – ABC of shoe designing.
2. Martin, Shoben, Janet P. Ward - Pattern Cutting and Making Up.
3. Swayam Siddha - The Art of Cutting Kid and Goat Skin.
4. Korn J. (Editor) - Boot and Shoe Production.
5. Thornton J. H. - Text Book of Footwear Manufacture.
6. SATRA Bulletin.
7. Spencer Crookenden - K Shoes -The first 150 years 1842-1992.

FE-308: Quality Assurance of Footwear Materials

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives: The objectives of this course are as follows:

- To provide an overview of sampling techniques for physical test.
- To explore the necessity of thumb tests for upper leather.
- To disseminate knowledge about different physical tests of shoe upper and lining materials.

- To deliver knowledge about lace tests, whole shoe tests, water resistance tests, and fasteners' tests.
- To provide an overview of different physical tests for shoe soling and insole materials.
- To disseminate knowledge about physical tests for shanks, heel, insoles, and footbeds.
- To deliver knowledge about whole footwear adhesion tests and safety footwear tests.
- To provide an overview of physical tests for packaging and shoe care products

Course Contents:

Value of testing: Objects of carrying out physical testing of footwear and allied materials. classification of physical testing methods. Calibration of machineries, report writing procedure.

Sampling for physical testing: Introduction, statistical aspects of the sampling problem, collection of samples, sections of raw hides and skins and of leather, sampling positions, conditioning of test pieces.

Thumb tests for upper leathers: Popular thumb tests for upper leathers, disadvantage of thumb tests

Physical tests for footwear upper and lining materials: Strength tests of different upper/lining materials- tear strength, tensile (or breaking) strength and extension at break, lastometer test or ball burst test; Tests for flexing performance-vamp flex test, Bally flexometer test, resistance to stretching and flexing test; Abrasion tests for different uppers/lining and sock lining materials- rub fastness (circular), rub fastness (to-and-fro), Martindale abrasion, drum abrasion-snap, chisel scuff test; Testing for colour fastness- heat, contact and light, rubbing methods, soaking methods, assessing colour changes and staining; Different test methods for water vapour permeability and absorption of upper and lining materials;

Thermal properties: Determination of whole shoe thermal insulation value and cold rating, Thermal conductivity' (the Lee's Disc material test).

Seams: Seam tests for pre-production tests- Upper/lining materials- 'Strength perpendicular to needle perforations' test method /needle pull out test, Seam tests for complete footwear: seam strength: Abrasion and snagging resistance – drum method, measurement of the strength of stitched seams in upper and lining materials, resistance to stretch and flexing. Thickness, Break pipiness determination. Tests for leather finish film.

Tests for shoe laces: Breaking strength tests, abrasion resistance tests, shoe lace to shoe lace and shoe lace to lace carrier abrasion, abrasion between shoe laces and eyelets, colour fastness of laces, knot slippage and security, tag retention; Tests for shoe lace carriers and facings- Strength of attachment to the upper, Abrasion of laces against the carrier.

Tests for box toes and counters: Shape retention, preparation of dome-shaped specimens, heat-activated materials, solvent-activated materials, non-thermoplastic fibreboard, measurement of area shape retention, measurement of collapsing loads, resilience and moisture resistance, bondability, bond formation, measuring bond strength.

Water resistance Tests: Material tests- Maeser test, penetrometer test, hydrostatic pressure test, Whole shoe tests- Trough – water penetration test, Dynamic footwear water penetration test, Whole boot flex and water resistance tests for wellington boots, Water resistance of footwear – centrifuge test method.

Whole shoe flexing: Whole shoe flexing- 'Resistance of footwear to flexing, Whole boot flex and water resistance tests for wellington boots, flexing machine – water penetration test, Resistance to crack initiation and growth – belt flex method.

Tests for zips: Lateral strength of zips, strength of zip pullers, attachment strength of zip end stops, resistance to damage during closure under a lateral force, slider locking strength of zips, zip burst strength.

Tests for Straps/buckles: Straps attached between the sole and insole- Strength of attachment test, Peel strength test, Toe post strap attachment strength, Strength of buckle and strap attachment, mechanically attached straps, Fatigue resistance of straps, Ageing resistance testing; Buckle strength tests- Strength of fastened buckles, three-point bending test.

Physical tests for Touch and close fasteners- peel strength, The after repeated closing test, shear strength; **Elastics-**limit of useful extension, resistance to repeated extension;

Reinforcement- Tensile properties, and the extension at which it breaks, tear strength, seam holding strength; trim attachment- attachment strength, security of decoration- abrasion resistance of trims – drum method, security of attachment of stones or inlays; **Thread-breaking** strength, abrasion resistance, colour properties; Tests for Top-pieces, studs etc.

Physical tests for soling materials: Sole abrasion resistance- drum abrasion/ DIN abrasion, biomechanical abrasion test, leather abrasion, Martindale abrasion, scuff resistance, NBS abrasion, Akron abrasion; sole flexing resistance tests- Ross flex, whole sole forepart, rigidity test, flexing test, Bennewart' flexing, belt flex, De Mattia flex test, extension fatigue cracking, bend flexing, strength of soling materials- Preparing test specimens, tensile strength and extension at break, tear strength, split tear strength and stitch holding strength, thickness measurement, rubber hardness measurement for various soling and heel materials. slip resistance of soling materials.

Physical tests for insole materials: Insole strength- three directions of test, tensile properties of semi-rigid materials, tensile properties of flexible materials, transverse tensile strength; Durability of insoles- flexing endurance, abrasion resistance

Tests for shanks: Measurement of hardness, measurement of stiffness, measurement of fatigue resistance.

Physical tests for heel: Heels- strength against impact and fatigue breakage, ii) pin holding strength and iii) the adhesion of any surface lacquer, reasons for poor results, the holding strength of pinned assemblies.

Insocks and footbeds-Measuring durability- abrasion resistance- martindale method, colour fastness- colour fastness to water and perspiration, colour fastness to rubbing – crockmeter test, washability; Measuring comfort-shock absorption- Fall mass shock absorption test, Cushioning properties, Friction, Thermal properties- Thermal conductivity', Moisture management- Surface water absorption and repellency.

Physical tests for whole footwear adhesion: Preparing the specimens, measuring ultimate peel strength, rapid sole adhesion, heat resistance, whole shoe flexing.

Bonded assemblies in the laboratory: Preparing assemblies for peel test, stuck-on assemblies, moulded-on assemblies, hot-melt bonded assemblies, measuring ultimate peel strength, measuring green strength, measuring adhesive tack, heat resistance, test ageing of bonds.

Tests for safety Footwear: Impact resistance of toecap, compression resistance, electrical resistance. Penetration resistance of metal insole. Upper/outsole and sole interlayer bond strength, insulation against heat, insulation against cold, resistance to fuel oil, corrosion resistance of metallic part.

Packaging: Tests for packaging materials.

Tests for shoe care products: Assessing water and oil repellency for shoe care products, mud (soil) resistance, general testing.

Learning Outcomes: Upon completion of this course students will be able-

- To know about physical test sampling techniques.
- To learn about thumb tests for upper leather.
- To learn about various physical tests for shoe upper and lining materials.
- To know about water resistance test.
- To know about whole shoe flexing test.
- To learn about different fasteners' physical tests.
- To know about physical tests for shoe outsole and insole materials.
- To learn about physical tests for shank, heel, insocks, and footbeds.
- To learn about physical tests for whole footwear adhesion and safety footwear.
- To know about physical tests for shoe packaging materials and shoe care products.

Reference Books:

2. Dutta S.S. - An Introduction to the Principles of Physical testing of Leather.
3. O'Flaherty, William. And Roddy-The Chemistry and Technology of Leather, Vol-IV
4. Heidemann E. -Fundamentals of Leather Manufacturing.
5. Dutta S.S. - An Introduction to the Principles of Leather Manufacture.
6. John Arthur Wilson-Modern Practice In Leather Manufacture.
7. Venkatachalam P.S. - Lecture Notes on Leather.
8. SATRA Owner's Manual – SATRA, UK.

FE-309: Quality Assurance of Footwear Materials Lab

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0/Group

Learning Objectives: Specific objectives of this course are as follows.

- To prepare samples for physical test.
- To demonstrate different thumb tests for upper and lining leather.
- To practice different physical tests for shoe upper and lining materials.
- To determine finish film and other components' quality.

Course Contents:

1. Determination of sampling location for different types of leather.
2. Determination of essential properties of leather by thumb tests.
3. Determination of thickness, break pipiness of leather.
4. Determination the strength properties of upper and lining materials - tear strength, tensile (or breaking) strength and extension at break, lastometer test or ball burst test, seam strength,
5. Determination the tests for flexing performance- vamp flex test, Bally flexometer test, resistance to stretching and flexing test;
6. Determination of abrasion tests for different uppers/lining and sock lining materials- rub fastness (circular), rub fastness (to-and-fro), Martindale abrasion, drum abrasion-snap, chisel scuff test;
7. Determination the tests for colour fastness- heat, contact and light, rubbing methods, soaking methods, assessing colour changes and staining;
8. Determination of water vapour permeability and absorption of upper and lining materials;
9. Determination of whole shoe thermal insulation value and cold rating, Thermal conductivity' (the Lee's Disc material test).
10. Conduct the tests for leather finish film.
11. Conduct the tests for shoe lace, toe puff and counters, zips, threads, reinforcements, touch and close fasteners etc.
12. Determination of sampling location for unit sole.
13. Determination of sole abrasion resistance- drum abrasion/ DIN abrasion, biomechanical abrasion test, leather abrasion, Martindale abrasion, scuff resistance, NBS abrasion, Akron abrasion;
14. Determination of sole flexing resistance tests- Ross flex, whole sole forepart, rigidity test, flexing test, Bennewart' flexing, belt flex, De Mattia flex test, extension fatigue cracking, bend flexing,
15. Determination of strength of soling materials-tensile strength and extension at break, tear strength, split tear strength and stitch holding strength,
16. Determination of thickness measurement, rubber hardness measurement, slip resistance for various soling and heel materials.
17. Conduct the physical tests for insole materials- insole strength, flexing endurance, abrasion resistance.
18. Conduct the physical tests for whole footwear adhesion- ultimate peel strength, rapid sole adhesion, heat resistance, whole shoe flexing.
19. Conduct the physical tests for insoles and footbeds-abrasion resistance- martindale method, colour fastness- colour fastness to water and perspiration, colour fastness to rubbing – crockmeter test, washability, shock absorption, thermal conductivity.
20. Conduct the physical tests for shank, heel, packaging material, shoe care products,

Learning Outcomes: Upon completion of this course students will be able-

- To locate sample area for several physical tests.
- To perform thumb tests for leather upper and lining materials.
- To investigate quality of shoe upper and lining materials.

- To perform several whole shoe tests, namely thermal insulation and cold rating.
- To conduct required physical tests for fasteners.
- To locate sample area for unit sole physical tests.
- To perform sole abrasion test, sole flexing test, soling materials' strength test, slip resistance of soling materials, safety footwear test, and whole footwear adhesion test.
- To conduct physical tests for shank, heel, insoles, footbeds, packaging materials, and shoe care products

Reference Books:

1. Society of Leather Technologists and Chemists-Official Methods of Analysis-1996.

7. Venkatachalam P.S. - Lecture Notes on Leather.

FE-310: Footwear Merchandising

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives: The objectives of this course are given as follows:

- To disseminate knowledge about the basics of merchandising.
- To analyze market trends.
- To provide knowledge about footwear design criteria and proto-type preparation.
- To equip students with knowledge and theories of merchandise plan, costing and negotiation, and Bill of Materials (BOM).
- To provide knowledge how to make outsourcing strategic decisions.
- To introduce students how to create pre-production plan and manage production follow-up.
- To provide an overview of communication with buyer.
- To coordinate and manage shipment.

Course Contents:

Introduction to Footwear Merchandising: Definition of merchandising, Definition of Merchandiser, Functions and role of Merchandiser in footwear business, merchandising tools, Merchandising Process.

Assessment of Market Trends: Research on target footwear market, materials, components, sustainable sources /suppliers for procurement, review previous designs & samples analysis.

Determination of Key Criteria for Footwear Design: Identify business processes and client goals, Identify Quality standards for designs, identify budget, cost points and timing

constraints, Check the Tech-pack received and identify it with the design brief given by the designer and also checked if all specifications are there in the tech-pack.

Prototype Preparation: Procedure of check the specification sheet prepared in accordance with standard format. Preparation, coordination and confirmation of pattern cutting, detailed drawings and mini- markers. Preparation, coordination and confirmation of patterns developed are according to the shrinkage report, tested and received. Procedure and method of checking of assembled garments according to specifications sheet and accepted garment assembly techniques. Procedure and method of Prototype sent for test report either according to company norms or as per the buyers' standards requested.

Outsourcing decisions: The role of outsourcing in a business, in-house or outsource, examples of successful third-party suppliers, total cost of ownership, supplier selection-auctions and negotiations, sharing risk and reward in the supply chain, the impact of incentives when outsourcing, and case study.

Merchandise Plan: Preparation, coordination and confirmation Prototype checked with design team and sent to buyer for approval and accordingly changes done if any and confirmed for production. DS (Development sample), QS (Quotation sample), SS (Size sets), CS (confirmation sample) approval from buyer. Procedure and Method of raise and receive P.O (Purchase Order) & P.I (Performa Invoice) after confirmation on the costing to buyer and vendor.

Costing and Negotiation with Buyer: Procedure for Pricing and costing. Productcosting procedure, LO calculation procedure, Determination of monitoring procedures and checking points, follow-ups with IE Department and calculation of the SOT (standard operating time), SAM (Standard Allowed Minute) of the sample. Method of TNA (Time and Action), final FOB calculation procedure, negotiation with buyer to fix the product price with maximum profit.

Order confirmation: Checking procedure "Production Capacity VS order quantity", Ensure round of the order based on factory capacity, CAPA based order confirmation, Received P.O checking procedure.

Preparation and Evaluation of the Bill of Material: Procedure and Method of preparation a well formed Bill of Material for each of the styles in the collection. Method of specify all that is required like the raw material, parts, quantities of each needed to manufacture the end product. Method of initial costing of the sampling derived. Appropriate personnel identified for the consumption to be made for making, required involvement of patternmaker and tailor, calendar preparation made with the estimated details got to fix on the delivery date after confirmation on the sample.

Preparation of pre-production file and pre-production meeting (PPM): Procedure and method of create a good and accurate and pre-production file. Procedure and method of maintaining the file with the tech-pack, production order sheet with size break up, cut plan and mini marker, packaging specification, Test report, TNA Chart and important mail conversations etc. Procedure and method of clarifies and address any potential issues if any at the pre-production meeting. Procedure and method of identify any other issues, raised if any from the other department personnel attending the meeting. Procedure and method of handling to sort out issue based PPM meeting, if any. Procedure and method of prepare minutes of the PPM meeting.

Production, Planning, Quality, shipment follow up: Merchandiser roles in Production department, Planning department, quality department, shipment date, follow up to meet buyer requirements, and Ensure right products on right time for buyer.

Communication with buyer: Business communication, Types of Business Communication, importance of effective business communication, modern communication tools, sustainable communication ways.

Buying House Coordination: Procedure and method of coordinate with buyer or buying house if any clarification is required that is if any issue raised during production is not well identified internally. Procedure and method of coordinating with buying house QA or 3rd Party QA for initial/mid and final inspection of shipment. Procedures and methods of inspection.

Coordination and Management of Shipment: Procedure and method of check execution of orders whether it is running on time. Procedure of shipping and documentation. Method of coordination with shipping and documentation department for forwarding approved shipment. Procedure and method of closely work with logistics and help shipping department with timely information of packing reports for preparation of shipping documents

Learning Outcomes: Upon completion of this course students will be able-

- To learn the roles of merchandiser.
- To identify latest trends and develop need basis footwear.
- To know about how to prepare BOM and set price through proper negotiation with buyer.
- To make pre-production plan and follow-up production floor.
- To learn about coordination and shipment management.

Reference Books:

1. A J Chuter, Introduction to clothing production management
2. Gini Stephens Frings (1999): Fashion: From concept to consumer, Prentice-Hill Inc.
3. Grace I kunz, Merchandising: Theory, Practice and Principles
4. Harry B. Watton (1992.). New Product Planning, Prentice Hall Inc.
5. John Donnellan, Merchandise Buying and Management.
6. Lynda Gamans, Retailing Principles

FE-311: Pattern Design and Engineering-II Lab

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0/Group

Learning Objectives: Specific objectives of this course are as follows.

- To practice standard and sectional pattern making for various styles of footwear.
- To demonstrate manual pattern grading of shoe upper, lining, and outsole pattern.
- To draw pattern of unit, rigid, and cavity outsole.

Course Contents:

1. Design and pattern making of the following footwear:

- a) Moccasin b) Mule c) Casual d) Sports e) Safety

Activity:

- i) Select suitable last
- ii) Masking, designing, forme making, mean forme making, standard construction for upper and lining.
- iii) Sectional pattern making for upper and lining and other components of footwear upper part.
- iv) Pattern making for bottom part of the footwear.
- v) Grading the patterns for different sizes.
- vi) Calculation consumption of materials according to the pattern.
- vii) Quality checks for the patterns and make corrections if necessary.

2. Mould design for outsole: Unit, rigid, and cavity outsole.

Learning Outcomes:

Upon completion of this course students will be able-

- To prepare upper and sectional pattern of moccasin, mule, casual, sports, and safety footwear.
- To convert of one size of footwear into another size through manual grading of upper, lining, and sole patterns.
- To design mould of unit sole, rigid sole, and cavity sole.

Reference Books:

1. Martin, Shoben, Janet P. Ward - Pattern Cutting and Making Up

4. Miller R. G. (Editor) - Manual of Shoe Making
5. Korn J. (Editor) - Boot and Shoe Production
6. Thornton J. H.- Text Book of Footwear Manufacture
7. SATRA Bulletin
8. Spencer Crookenden - K Shoes -The first 150 years 1842-1992

FE-312: Fundamentals of Leather Products Manufacturing

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives:

- To know the basic ideas on fashion, elements of fashion, style, and design techniques.
- To gather knowledge on pattern making process.
- To understand the unit operations for leather goods and garments manufacturing.
- To know the materials used in leather goods and garments manufacturing.
- To acquire knowledge on body proportion and measurement techniques for garments manufacturing.
- To know the different types of garments elements like sleeve, pockets, collar, waist bands for garments manufacturing.
- To gather basic knowledge on skirt and jacket manufacturing process.

Course Contents:

Introduction: History of leather products, types of leather products, classification of leather goods, terms used in leather goods manufacture, art, design, fashion, classic fashion, style, FAD, craze, product life cycle, definition of pattern, classifications of pattern, pattern indication, pattern placement, tools and machinery used in leather goods and garments manufacturing, accessories used in leather products manufacturing, definition of edge construction, types of edge construction, unit operations for leather goods.

Cutting operations for leather products: Hand and automatic cutting, various cutting operations, classification of cutting systems for leather goods, manual die cutters, NC die cutters, automatic die cutters, universal die cutters, comparison of various cutting techniques, advantages and disadvantages of automatic die cutting systems, die-less cutting system, specifications and architecture of cutting systems, advantages of continuous cutting systems, cutting procedure for certain leather products, works to be done before cutting, during cutting and after cutting, qualification of a good cutter/clicker, common mistakes in cutting, parts and functions, process control and acceptance criteria of Arm type clicking machine, factors influencing cutting, cutting wastage determination, types of wastage.

Splitting: Definition, objectives of splitting, types and techniques of splitting, parts and function of splitting machine, trouble shooting of splitting, procedure of splitting, process control of splitting, acceptance criteria of splitting, thickness adjustment, sharpening of blade, control during splitting and skiving.

Skiving: Definition, objectives of splitting, types of skiving, parts and function of skiving machine, trouble shooting of skiving, procedure of skiving, process control of skiving, acceptance criteria of skiving, thickness adjustment, angular cutting, sharpening of bell knife, adjustment of bell knife and pressure foot.

Sewing operations for leather products: Needle and its parts and functions, specification of needle, needle point, needle system, characteristics of a good needle, thread, thread twist—'Z' and 'S' twist, properties of thread, thread sizing, thread and needle relationship, Sewing, stitch, seam, sewing machine, features of various types of sewing machine, classifications of seam.

Body proportion and measurement for leather garments manufacturing: Introduction, concepts of human body proportion, division into eights, golden section, construction of golden section, construction of golden rectangle, use/application of golden section, classification of body type with features, body measurement for garments manufacturing.

Skirt: Introduction, classification, basic measurements, designing and pattern making of straight skirt, assembling and stitching of skirt.

Jacket: Introduction, classification, basic measurements, block making for casual jacket and waist coat, designing and pattern making of jacket and waist coat, assembling, stitching and finishing of jacket, sleeve, collar, pocket for jacket manufacturing.

Learning Outcomes: Students will be able-

- To classify and identify various leather goods and garments.
- To make creative design and their patterns for leather goods and garments manufacturing.
- To realize the functions and working procedure of various machinery used in leather goods and garments manufacturing.

- To understand the cutting, splitting, skiving, and sewing operations used in leather goods and garments manufacturing.
- To carry out the various unit and supplementary operations for leather goods and garments manufacturing.
- To understand the body proportion and measurement techniques for leather garments manufacturing
- To acquire theoretical knowledge on how to manufacture leather goods and leather garments
- Overall, to understand the theoretical knowledge of leather goods and garments manufacturing process.

Reference Books:

10. Jane E. Garner-The Complete Handbook of Leather crafting.

FE-313: Leather Products Manufacturing Lab

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0/Group

Learning Objectives:

- To know the functions of tools and machinery used in leather goods and garments manufacturing.
- To know the pattern making process for specific design.
- To know the unit operations for leather goods and garments manufacturing.
- To gather knowledge on different materials like lining, reinforcement materials, accessories, and thread.
- To know the manufacturing process of various leather goods like Card Holder, Wallet, Photo frame, File folder, Ladies purse, Ladies Bag.
- To know the manufacturing process of pocket, collar, gusset, sleeve for garments manufacturing.
- To know the manufacturing process of various leather garments like skirt, jacket, waist coat, pant.

Course Contents:

Manufacturing of the following Leather Goods and Leather Garments:

- a. Card Holder
- b. Wallet

- c. Photo frame
- d. File folder
- e. Ladies purse
- f. Ladies Bag

Manufacturing of the following Leather Garments:

- a. Skirt
- b. Jacket
- c. Waist coat
- d. Pant

Learning Outcomes: Upon completion of this course students will be able

- To make creative design and patterns based on design.
- To know how the unit operations are carried out in the leather goods and garments manufacturing.
- To manufacture various leather goods like Card Holder, Wallet, Photo frame, File folder, Ladies purse, Ladies Bag.
- To manufacture the variety of garments products like skirt, jacket, waist coat and pant.

Reference Books:

6. Moseley G.C. – Leather Goods Manufacture
7. Kathryn Mc. Kelvey- Fashion source book
8. Gerhard John- Possible defects in leather production.
9. Swayam Siddha -Product Knowledge
10. Swayam Siddha -The Skill of Seam Reducing

BUS-301: Supply Chain Management for Leather and Leather Products

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives:

- Understand the fundamentals of Supply Chain Management (SCM) including its role in an organization and in integrating firms in a supply chain.
- Understand the various concepts in SCM like coordination, planning for uncertainty, supply contracts, logistics management, outsourcing and procurement management.
- Apply various analytical methods and tools so that students are able to measure and evaluate various facets of supply chain performance.
- Understand practices in SCM that differentiate successful firms from others.

- Understand the challenges in SCM through a real industry project.

Course Contents:

Understanding the Supply Chain: supply chain, supply chain 4.0, types of supply chains and examples, strategic, tactical, and operational decisions in supply chains, process view of a supply chain, the importance of supply chain flows, examples of supply chains.

Supply Chain Performance and drivers: Competitive and supply chain strategies, achieving strategic fit, expanding strategic scope, a framework for structuring drivers, Facilities, Inventory, Transportation, Information, Sourcing, Pricing, Obstacles to achieving fit.

Designing the Distribution Network Design in the Supply Chain: the role of distribution in the supply chain, factors influencing distribution network design, design options for a distribution network, e-business and the distribution network, distribution networks in practice, A strategic framework for facility location, Multi-echelon networks, Gravity methods for location, Plant location models, The Impact of Uncertainty on Network Design Decisions, Discounted Cash Flow Analysis, Representations of Uncertainty, Evaluating Network Design Decisions Using Decision, Evaluation of Supply Chain Design Decisions Under Uncertainty, Making Supply Chain Decisions Under Uncertainty in Practice.

Demand Forecasting in a Supply Chain: The role of forecasting in a supply chain, Characteristics of forecasts, Components of forecasts and forecasting methods, Basic approach to demand forecasting, Time series forecasting methods, Measures of forecast error, Forecasting in practice.

Sourcing Decisions in a Supply Chain: The Role of Sourcing in a Supply Chain, Supplier Scoring and Assessment, Supplier Selection and Contracts, Design Collaboration, The Procurement Process, Sourcing Planning and Analysis, Making Sourcing Decisions in Practice.

Strategic Lead Time Management: time-based competition, time-based process mapping, logistics pipeline management. Lean thinking,

JIT and Quick Response Logistics: The philosophy, logistics implication, Vendor Managed Inventory;

Agility and Agile Supply Chain: the concept of market winner and market qualifier, How to combine lean and agile mindsets (pareto curve, decoupling point),

Managing the Global Pipeline: The tradeoffs among the logistics costs, concepts of Centralization, Focused Factories and Postponement.

Advanced planning and scheduling in supply chain Management: Understanding and solving logistics and supply chain problems. Advanced Planner and Scheduler.

Learning Outcomes:

- To learn the strategic importance of goods supply, chain design, planning, and operation for every firm.
- To convey how supply chain drives may be used on a conceptual level during supply chain design, planning and operation to improve performance.
- To gain knowledge of logistics and supply chain methodologies
- To understand how logistical decision and impact on the performance of the firm as well as the entire supply chain.

Reference Books:

1. K.Shridhra Bhat, “Logistics and Supply Chain Management”.
2. S. Chopra and Mendil, “Supply chain management, strategy, planning and operation”, Pearson Education, Asia, 2/2004.

4. G. Raguram and N. Rangarajan, “Logistics and Supply Chain Management-Cases and concept”, Macmillan.

Fourth Year (1st Semester)

FE-401: Manufacturing of Specialty Footwear

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives: The objectives of this course are as follows.

- To provide an overview of different moulding techniques.
- To familiar students with army boot manufacture.
- To provide an overview of safety footwear manufacture.
- To provide an overview of different constructions of footwear.
- To disseminate knowledge about different types of moulded soles and moulded footwear construction.
- To disseminate knowledge about shoe finishing and packaging procedures.

Course Contents:

Safety footwear manufacture: Definition of safety, protective and occupational footwear, Types and functions of safety footwear for industry, forestry, motorcycle riders, firefighter, violent assault etc. Advantages of safety footwear, safety features- steel toe cap, non-metallic toe cap, protective midsole, heel energy absorption, water resistance, heat insulation, cold insulation, electrical resistance, conductive footwear, cut resistant uppers, instep impact protection etc. Comfort and ergonomics of safety footwear, safety footwear construction, manufacturing process of safety footwear.

Army boot manufacture: Types and functions of army boot, advantages of army boot, essential requirements of army boot, manufacturing process of army boot with quality controlling.

Footwear manufacture by different construction techniques: Principles, design criteria, procedure, advantages and disadvantages of force lasting, string lasting, sewn in-sock construction Californian slip lasted construction, Goodyear welted construction, Veldtschoen/stitchdown construction, sidewall stitched construction etc.

Machines for shoe-construction: Machines used in cemented, stitch down, welted, string lasted, DVP and DIP and other types of construction. Principles involved in their working-trouble shooting and preventive maintenance. Separate parts planning and inventing control.

Footwear manufacture by direct moulded soles- Meaning of direct moulded soles, sole materials and basic process, upper preparations and adhesive systems for direct vulcanized

rubber, direct injected PVC, injected-on thermoplastic rubber, reaction moulded polyurethane, PU reaction moulding.

All moulded footwear manufacture: Selection of materials, lasting for moulded construction, direct vulcanizing, bottom preparation for vulcanizing, injection moulding of P.V.C, bottom preparation for P.V.C injection moulding, injection moulding of P.U, bottom preparation for P.U injection moulding.

Shoe finishing and shoe rooming: Importance of shoe finishing and shoe rooming, principles of shoe finishing, finishing materials types and properties, considering points in shoe finishing- leather uppers, non-leather uppers, cleaning, top dressing, spraying, post finishing, bottom part finishing, health and safety. Removing stitch marks, hot blasting, ironing, singeing, labeling, insole tack clearing, sock insertion, types of insoles used in footwear, attaching ornaments, inspection, anti-fungal treatment, packaging etc.

Packaging and shipping of footwear: Packaging, storing and shipping of footwear, logistics, environmental protections, mould prevention, pressure, sensible precautions, waste management hierarchy in packaging, traditional boxes, packaging directive.

Learning Outcomes: Upon completion of this course students will be able-

- To provide an overview of army and safety footwear.
- To gather theoretical knowledge about different constructions of footwear.
- To learn about moulded sole construction.
- To know about shoe finishing and shoe room treatments.

Reference Books:

5. SATRA Bulletin
6. Spencer Crookenden - K Shoes –The first 150 years 1842-1992
7. Ruth Thomson – Making Shoes
8. Swayam Siddha – Product Knowledge
9. Swayam Siddha – The Skill of Seam Reducing
10. Thornton J. H.-Text Book of Footwear Materials

FE-402: Manufacturing of Specialty Footwear Lab

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0/Group

Learning Objectives: Specific objectives of this course are as follows:

- To provide practical knowledge about string lasting.
- To demonstrate Californian slip lasted construction.
- To demonstrate Goodyear welted construction.
- To demonstrate veldtschoen/stitchdown construction.
- To demonstrate sidewall stitched construction.
- To demonstrate direct moulded shoe construction.

Course Contents:

1. Manufacturing of footwear by string lasting, sewn in-sock construction, Californian slip lasted construction, Goodyear welted construction, Veldtschoen/stitchdown construction, sidewall stitched construction by the following actions:

- i) Selection and collection of last and all necessary patterns/knives.
- ii) Cutting of upper, lining and other materials according to pattern/knife.
- iii) Preparatory all operations such as skiving, stitchmarking, edge folding, ID marking etc.
- iv) Reinforcement attaching.
- v) Upper fitting and stitching.
- vi) Lasting – Toe puff attaching, backpart moulding, upper conditioning, Toe, seat and side lasting, heat setting,
- vii) Upper and sole preparation:
- viii) Adhesive application and heat reactivation
- ix) Sole bonding, chilling and delasting
- x) Shoe finishing and packaging.

2. Manufacturing of direct moulded shoe and all moulded footwear.

3. Manufacturing of army and safety footwear.

Learning Outcomes: Upon completion of this course students will be able-

- To operate string lasting.
- To manufacture shoes following Californian slip lasted construction, Goodyear welted construction, veldtschoen/stitchdown construction and sidewall stitched construction.
- To manufacture army and safety footwear.

Reference Books:

1. Central Footwear Training Institute – ABC of shoe designing.
2. Martin, Shoben , Janet P. Ward - Pattern Cutting and Making Up
3. Swayam Siddha - The Art of Cutting Kid and Goat Skin
4. Korn J. (Editor) - Boot and Shoe Production
5. Thornton J. H.- Text Book of Footwear Manufacture
6. SATRA Bulletin
7. Spencer Crookenden - K Shoes -The first 150 years 1842-1992

FE-403: Non Leather Upper Materials for Footwear

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives: The objectives of this course are as follows.

- To provide an overview of different physical and chemical structures and properties of textile fabrics.
- To disseminate knowledge about characteristics, fabrication, and suitability of poromeric, polymeric, and bonded leather materials.

Course Contents:

Textile fibre and yarn making: Classification of textile fibres with example, natural and synthetic fibres with composition, physical and chemical structure and properties of different

fibres, advantages, disadvantages and uses of different natural and synthetic fibres- cotton, bast, jute, wool, nylon, polyester, rayon etc., yarn making operations, different yarn numbering systems, suitability of different yarn types as sewing threads

Textile fabrics: Types of woven, knitted, braid and non-woven fabrics, Manufacturing procedure of different fabrics such as nylon, polyester, cotton, jute etc., Principles of different weaving systems (shaft and jacquard weaving), Principles of cloth construction, Basic weaves and variations, Physical properties, advantages, disadvantages and uses of different fabrics as footwear upper and lining materials, and Comparison of different textile fabrics (woven, weft knits, warp knits, braids, wool felt, and bonded leather).

Synthetic coated fabrics: Polyurethane Coated Fabrics- Transfer coated fabrics, manufacturing procedure, compounding PU, top coating, adhesive coating, fabric attachment, drying, cooling and stripping the PUCF; Coagulated PUCFs- Dip-coagulated PUCFs, fabric dipping, coagulating, washing, drying and finishing. Polyvinyl Coated Fabrics- Production of PVCCFs- formulation, coating the fabric, base fabrics, PU/PVCCFs. Physical and chemical properties, advantages, disadvantages and uses of PVC and PU coated fabrics as footwear upper and lining materials.

Poromeric materials: Physical properties and layers of poromeric materials, surface skin and microporous coating, interlayer, substrate and manufacturing procedure of poromeric materials. advantages, disadvantages and uses of poromeric materials in footwear industry.

Polymeric materials: Description of jelles as polymeric materials in footwear manufacture, uses of polymeric materials for moulded footwear manufacture. Advantages and disadvantages of polymeric materials as footwear upper.

Bonded leather fibres: Physical and chemical structure and properties of bonded leather fibre, Manufacturing procedure and uses of bonded leather fibre as footwear upper. Advantages and disadvantages of bonded leather fibre as footwear upper.

Learning Outcomes: Upon completion of this course students will be able-

- To know about textile fibre and yarn making.
- To learn about physical and chemical structures of textile fabrics.
- To gather knowledge about advantages and disadvantages of different textile fabrics.
- To know about fabrication procedures of several textile fabrics.

Reference Books:

1. Hannelore Eberle etl., Clothing Technology from Fibre to Fashion.
2. Janet Wilson, Classic and Modern Fabrics.
3. Gail Baugh, The Fashion Designer's Textiles Directory.

FE-404: Lean Manufacturing of Leather and Leather Products

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives:

- To implement lean manufacturing concepts in the factories.
- To know about tools of lean manufacturing.

Course Contents:

Introduction: The mass production system; Origin of lean production system; Necessity; Lean revolution in Toyota; Systems and systems thinking; Basic image of lean production; Customer focus; Muda (waste).

Stability of Lean System: Standards in the lean system; 5S system; Total Productive Maintenance; standardized work; Elements of standardized work; Charts to define standardized work; Man power reduction; Overall efficiency; standardized work and Kaizen; Common layouts.

Just in Time: Principles of JIT; JIT system; Kanban; Kanban rules; Expanded role of conveyance; Production leveling; Pull systems; Value stream mapping.

JIDOKA (Automation with a Human Touch): Jidoka concept; Poka-Yoke (mistake proofing) systems; Inspection systems and zone control; Types and use of Poka-Yoke systems; Implementation of Jidoka.

Worker Involvement and Systematic Planning Methodology: Involvement; Activities to support involvement; Quality circle activity; Kaizen training; Suggestion Programmes; Hoshin Planning System (systematic planning methodology); Phases of Hoshin Planning; Lean culture

Learning Outcomes: The student will be able to practice the principles of lean manufacturing like customer focus, reduction of MUDA, just in time, Jidoka and Hoshin planning.

Reference Books:

1. Dennis P., "Lean Production Simplified: A Plain-Language Guide to the World's Most Powerful Production System", (Second edition), Productivity Press, New York, 2007.
2. Liker, J., "The Toyota Way: Fourteen Management Principles from the World's Greatest Manufacturer", McGraw Hill, 2004.
3. Michael, L.G., "Lean Six SIGMA: Combining Six SIGMA Quality with Lean Production Speed", McGraw Hill, 2002.
4. Ohno, T., "Toyota Production System: Beyond Large-Scale Production", Taylor & Francis, Inc., 1988.
5. Rother, M., and Shook, J., 'Learning to See: Value Stream Mapping to Add Value and Eliminate MUDA', Lean Enterprise Institute, 1999.

FE-405: Production Planning and Control for Leather and Leather Products

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives:

- To get the idea on production systems, how to select the facility location, how to make the efficient production layout, how to conduct an analysis to demand forecasting for production management, how to manage inventory, how to carried out the work and method study in the leather products industry, and how to conduct operations scheduling and sequencing for leather products industry.
- Students will also get knowledge on how to implement the tools and techniques to manage the production in the leather products industry supply chain.

Course Contents:

Introduction to production management: production, production system, essential functions of manufacturing firms, basic production management function, the strategies of decision making in the leather production industry, productivity challenge, strategies of improving productivity in leather goods industry, concept of productivity, productivity calculations, multi-factor productivity, productivity variables, key variables for improved labor productivity, ethics, social responsibility, and sustainability.

Demand Forecasting: basic concept of forecasting, types of forecasts, strategic importance of forecasting for leather products industry, steps in forecasting, forecasting approaches, overview of qualitative methods, overview of quantitative approaches, time-series forecasting, methods of forecasting, common measures of error, least squares method for demand forecasting, multiple-regression analysis, monitoring and controlling forecasts, tracking signal, adaptive smoothing, advanced forecasting techniques.

Facility planning and layout design: strategic importance of layout decisions, layout design considerations, layout strategies, types of layout, warehousing and storage layouts, fixed-position layout, process-oriented layout, problems related to process oriented layout, staffing and balancing work cells, repetitive and product-oriented layout, problems related to product-oriented layout, assembly-line balancing, line-balancing heuristics.

Inventory management: basic ideas of inventory, importance of inventory, functions of inventory, types of inventory, managing inventory, ABC analysis, terms used in inventory management, cycle counting, inventory models, inventory models for independent demand, basic economic order quantity (EOQ) model, production order quantity model, quantity discount model, probabilistic models and safety stock, probabilistic demand, probabilistic example.

Capacity planning: definition, design capacity, effective capacity, determinants of effective capacity, capacity requirement, developing capacity alternatives, evaluating alternatives.

Operation scheduling and sequencing: basic concepts of short time scheduling, importance of short-term scheduling, scheduling flow, forward and backward scheduling, scheduling criteria, Gantt charts, assignment method, sequencing jobs, FCFS, SPT, EDD, LPT, critical ratio, Johnson's rule for sequencing, linear programming, transportation model, network analysis, critical Path Method (CPM), programme evaluation and review technique (PERT), critical path and determination of minimum member of works.

Work Study: Method study, Purpose and Techniques used, Procedure of select, Record, Examine, Develop, Install and Maintain. Precautions when introducing new methods,

Relationship with work measurement. Work measurement, purpose and techniques used, Rating, Elements, Break points, Basic time, Use of allowances.

Activity sampling, definition, purpose and procedures, use of pilot study, Interpretation of results.

Production studies, machine utilization and operator performances, Hok (operator hours per 100kg production), Machine interference.

Production cost concept and break- even analysis: cost of production, concept of cost, cost unit, classification of cost, analysis of production cost, break –even analysis, break – even point, cost-volume- profit (CVP) analysis.

Learning Outcomes: From learning this course the students can understand

- the basic of production systems, capacity planning, facility planning and layout design demand forecasting, leather products industry's inventory management, work and method study for productivity improvement and line balancing, materials resource planning and operation scheduling and sequencing.

FE-406: Application of Computer in Footwear Design

Credit	Class/week (h)	Total Class (h)
2.0	4.0/Group	60.0/Group

Learning Objectives:

- To demonstrate Computer Aided Shoe Design.
- To conceptualize any design.
- To practice Pattern developments & Grading by using latest shoe designing software like Shoemaster and Crispin.

Course Contents:

1. Installed all kind of machines related to CAD software.
2. Digitizing style line.
3. Scanning 3D last, making E-last and modification the last.

4. Drawing line, square, rectangle, triangle, round etc. by CAD software.
5. Adding centre line, top line, feather line on the digitized shell.
6. Creating new style lines and explanation of new line.
7. Drawing new offset line, tied off set line, mirror line, average line, line modification,
8. Using of ARRAY 3D, MIRROR 3D, ROTATE 3D commands.
9. Making new piece/pattern and modification of piece/pattern.
10. Flattening, types of flattening, moccasin flattening
11. Use of tooling element, types of punches, use of punch.
12. Adding different type of text on piece/pattern.
13. Adding different types of allowance in piece/pattern.
14. Adding different types of marker in piece/pattern.
15. Use of pattern unfold command.
16. Style transfer, 3D to 2D style transfer, 2D to 3D style transfer
17. 3D project making, 3D rendering.
18. Making 3D visualization before production and various approaches using various types of leather colors.
19. Grading all patterns, upper grading, bottom grading, group grading, restricted grading and cutting with plotter.
20. Making consumption sheet.
21. Making Auto CAD design for the major components of Derby, Oxford, Court, Sandal, Moccasin, and Boot footwear using Shoemaster/Crispin.

Learning Outcomes: Upon successful completion of the Computer Aided Design and Pattern Making course, the learner will be able to:

- Recall drawing and modification functions of CAD software as well as Shoemaster and Crispin.
- Produce two-dimensional and three-dimensional drawings of various footwear using Shoemaster and Crispin.
- Produce several design variation of Derby, Oxford, Court, Sandal, Moccasin, and Boot footwear using Shoemaster and Crispin Software.

Reference Books:

5. Pivecka J.- Practical Handbook on Shoe Production.
6. Americal Shoe Making, Shoe Trades Publishing Co.
7. Hitomi K.- Manufacturing System Engineering.
8. Sadhu Singh- Computer Aided Design and Manufacturing.
9. Shoemaster- World Leaders in CAD/CAM technology “Patterns usres guide”.
10. Leather Technology Mission- Shoe designing.

FE-407: Industrial Utility and Maintenance

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives:

- Define and explain the maintenance function and its objectives.
- Understand the main forms of maintenance and their application.
- To optimize the reliability of equipment and infrastructure.
- To train personnel in specific maintenance skills.
- To improve operational safety.

Course Contents:

Air conditioning: Comfort condition, Principle of air conditioning, Application to Leather Product industry; Refrigeration equipment, Refrigerant.

Psychometric chart and psychometric processes; calculation of simple air conditioning system, Distribution system, Humidifier, De-humidifier, Cooling tower.

Thermal power plants: Basic principles and cycles used; Steam power plants; Diesel power plants; gas power plants; combined cycle power plant, regeneration.

Boiler: Boiler types, mountings, accessories, boiler efficiency.

Material handling equipment: Issues and importance of material handling, selection and classification of material handling equipment, various types of conveyors equipment- belt, screw, chain, flight, bucket elevator, pneumatic, hydraulic, cranes and forklifts.

Lubrication: Lubricant, types, general properties, functions, lubrication system.

Machine erection: Floor preparation, foundation, machine fixation, leveling.

Maintenance: Types of maintenance, planning and organizing maintenance, preparation of maintenance schedule. Maintenance of various machineries of tannery/foot wear and other leather product industries.

Learning Outcomes:

- Discuss the field of industrial maintenance and describe its role in manufacturing
- Explain the skills and preparation needed for jobs in industrial maintenance
- Describe specific procedures for ensuring safety in the workplace
- Describe types of maintenance strategies and their purpose
- Explain the purpose of mechanical drive systems used in manufacturing
- Identify the most common machine tools and their uses
- Describe how electric devices work and identify common electrical tests and maintenance tasks
- Describe how industrial process systems work, including inputs, outputs, and safety considerations

Reference Books:

1. Sharphouse - Leather Technicians Hand books.
2. Pivecka J. - Practical Handbook on Shoe Production.
3. Boothroyd G.- Assembly Automation and Product Design
4. Miller R. G. (Editor) - Manual Of Shoe Making
5. Miller R.G. (Editor) -Manual of Shoe Making

6. Thornton J. H. -Text Book of Footwear Manufacture
7. G. R. Nagpal, G R. Khanna- Power Plant Engineering
8. V. Ganesan-Internal combustion engines
9. W.F.Stoecker & J.W. Jones-Air Conditioning and Refrigeration
10. Assomac-The Innovation Notebooks for The Leather Goods Industry

FE-408: Maintenance Workshop

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0/Group

Course Objectives: Specific objectives of this course are as follows.

- To practice how to create comfort working condition in different season during the production.
- To demonstrate different power generation unit this can support the production floor.
- To demonstrate different material handling equipment.
- To give idea how to check machine comfort by spirit level.
- To demonstrate different Leather-Products machineries maintenance.

Course Contents:

1. Study the Air Conditioning and controlling system to create comfort.
2. Study the distribution of conditioned air through ducts or pipes.
3. Study the Humidifier, Dehumidifier and cooling tower.
4. Study the control and maintenance of emergency power supply unit (Diesel power unit) of our institute.
5. Study the use of different material handling equipments like belt-conveyor, wooden horses and forklifts etc.
6. Study the use of different Lubricants and hydraulic oils which are directly used in Leather-Products machineries.
7. Use of spirit level to check the comfort machine operations.
8. Check and fill the hydraulic oil up to the level of the machine of Travelling head hydraulic press.
9. Check and sharp the band saw of the leather splitting machine.
10. Check and sharp the circular cutter of skiving machine.
11. Check and adjust the operating pressure of different pneumatic sewing and finishing machine of Leather-Products.
12. Check the operating condition of central pneumatic compressor.

Learning Outcomes: Upon completion of this course students will be able-

- To control air conditioning system and create production floor comfort.
- To understand the use of different kind of ducts and pipes.
- To know the appropriate use of Humidifier, Dehumidifier and cooling tower.
- To know the appropriate use of different kind of power units.
- To understand different types of materials handling equipments.
- To know the use of different Lubricants and hydraulic oils.

- To know the Use of spirit level.
- To know the maintenance of the machine of Travelling head hydraulic press.
- To know the maintenance of the leather splitting machine.
- To know the maintenance of the skiving machine.
- To know the maintenance of the pressure gauge.
- To know the maintenance of the pneumatic compressor.

Reference Books:

1. Sharphouse - Leather Technicians Hand books.
2. Pivecka J. - Practical Handbook on Shoe Production.
3. Boothroyd G.- Assembly Automation and Product Design
4. Miller R. G. (Editor) - Manual Of Shoe Making
5. Miller R.G. (Editor) -Manual of Shoe Making
6. Thornton J. H. -Text Book of Footwear Manufacture
7. G. R. Nagpal, G R. Khanna- Power Plant Engineering
8. V. Ganesan-Internal combustion engines
9. W.F.Stoecker & J.W. Jones-Air Conditioning and Refrigeration
10. Assomac-The Innovation Notebooks for The Leather Goods Industry

HUM-401: Employability Skills-II

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0/Group

Learning Objectives:

- To develop ability to gain key strategies and expressions for communicating with professionals and non-specialists.
- To improve the skills of writing, for example, business plan.
- To improve the presentation skills
- To gain insight on how to deliver good presentation

Course Contents:

Writing Concept of Business Plan: Writing of business plan for various types of leather and leather products.

Presenting business plan: Making interactive presentation slides and presenting the business plan.

Learning Outcomes:

- Will be able to develop key strategies and expressions for communicating with professionals and non-specialists.
- Will be able to improve the skills of writing, for example, business plan.
- Will be able to improve the presentation skills
- Will be able to gain insight on how to deliver good presentation

Reference Book:

1. Joseph A. Covello And Brian J. Hazelgren, The Complete Book of Business Plan- Secrets to Writing Powerful Business Plans.

Fourth Year (2nd Semester)

FE-409: Wastewater and Solid Waste Management

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives:

- To describe methods of advanced effluent treatment for higher discharge standards and effluent re-use.

Course Contents:

Principal industries attributed for water pollution: Types of water pollution – physical, chemical and biological pollution. Hazardous effects of water pollution on land, ground water, surface water, aquatic life and sea. Ecological system and water pollution.

Types of tannery effluent: Effluent from beam house operations, tan yard processes and finishing processes, their nature, most toxic ingredients in tannery waste water.

Tannery Effluents: Source of liquid wastes in tanneries; Characterization and assessment of critical environmental parameters. Chemistry and Characteristics of Environmental Parameters-Total solids, total dissolved solids, volatile matters, BOD₅, COD, TOC, TDS, ammonia, nitrogen, protein content, chlorides, alkalinity, pH, sulphide, DO, total coliform count, polyphenol, metal content.

Processes for the treatment of industrial wastewater - principles of physical treatment: screening, mixing, equalization, sedimentation, filtration - principles of chemical treatment: coagulation, flocculation, precipitation, ion exchange, use of alkali, CaO, neutralization, flotation, oxidation/reduction, distillation - objectives of biological wastewater treatment and various process.

Primary Treatment: Main objects of primary treatment- primary Treatment units- Collection system of discharged waste water in tanneries- screening- equalisation of waste water.

Secondary Treatment: Principles of secondary treatment- Different processes involved in secondary treatment system- Lagoon treatment- aeration system- trickling filter- systematic design of these systems- bio-technology in effluent treatment.

Tertiary Treatment: UV treatment, ozonolysis, chlorination, reverse osmosis. Concept of CETP, disposal of sludge.

Principle of biological treatment: derivation of bacterial growth kinetics. Process design and operation of attached growth, suspended growth and hybrid process: activated sludge process - its modifications, trickling filter, RBC, oxidation ditch, aerated lagoon, biofilter, anaerobic baffled reactor, UASB reactor. Waste stabilization pond, design and operation of biological nitrification, de-nitrification system; Floating aquatic plant system.

In-Plant Management for Pollution Reduction: House-keeping, segregation of waste streams, reduction of water use, chemical use. Recycling and reuse of chemicals and water, water foot print.

Source of Solid Waste in Leather Products Industry: Trimming of finished leather, cutting, skiving, waste from upper, buffing dust, sewing dust, waste from lining materials- PVC, PU, Cotton, ; waste from reinforcement materials- PVC, PU, Rubber, PVA, Cotton, metals, eyelets, textile, laces, paper, inner box, wooden pallets, cartoon, adhesives, waste from post-consumer.

Integrated waste management in Leather Products Industry: Prevention, reduction, reuse, recycling, energy recovery and disposal.

Learning Outcomes:

- Understand the role of each unit process within typical treatment process trains, their interaction and the context of when they are applied.
- Appreciate the advantages, disadvantages and limitations of the technologies and new developments.

FE-410: Wastewater and Solid Waste Management Lab

Credit	Class/week (h)	Total Class (h)
1.5	3.0/Group	45.0/Group

Lab based on the content of FE-409.

BUS-401: Total Quality Management (TQM) for Leather and Leather Products

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives:

- To provide comprehensive knowledge about the principles, practices, tools and techniques of Total quality management.
- To understand the need for quality, its evolution, basic concepts, contribution of quality

- TQM framework, Barriers and Benefits of TQM.
- To understand the TQM Principles.
- To learn and apply the various tools and techniques of TQM.
- To understand and apply QMS and EMS in any organization.

Course Contents:

Introduction: Modern concept of quality and its measurement, quality redefined, identification of quality characteristics: quality of design conformance and performance, Deming's principles on quality and productivity, Quality costs and their interpretation, Basic concepts of TQM, TQM Framework

Statistical Quality Control: Control and measurement of quality, Elementary SPC tools: Control charts, Process capability analysis, Design of experiments, Acceptance sampling plans: OC curves, single and double sampling plane, rectifying inspection, AOQ.

TQM Principles: Quality statements, Customer focus, Customer orientation, Customer satisfaction, Customer complaints, Customer retention - Continuous process improvement, PDCA cycle, 5S, Kaizen, Supplier partnership, Partnering, Supplier selection, Supplier Rating.

TQM Tools & Techniques I: The seven traditional tools of quality, New management tools, Six-sigma: Concepts, methodology, applications to spinning, weaving, chemical processing and garment industries, Bench marking, Reason to bench mark, Bench marking process, FMEA, Stages, Types.

TQM Tools & Techniques II: Quality circles, Quality Function Deployment (QFD) Taguchi quality loss function, PM Concepts, improvement needs, Performance measures, BPR; application of TQM tools in Leather/Footwear/Leather Product industry, BSTI, ASTM.

Quality Systems: Need for ISO 9000- ISO 9000-2000 Quality System, Elements, Documentation, Quality auditing- QS 9000, ISO 14000 Concepts, Requirements and Benefits, Quality Council, Leadership, Employee involvement Motivation, Empowerment, Team and Teamwork, Recognition and Reward.

Strategic Lead Time Management: Time based competition, time based process mapping, logistics pipeline management. Lean thinking, Lean operations, Push-pull production concepts, KANBAN, Kaizen, Toyota Approach, Seven elements of JIT system for planning and control

Learning Outcomes:

- Ability to apply TQM concepts in a selected enterprise.
- Ability to apply TQM principles in a selected enterprise.
- Ability to apply the various tools and techniques of TQM.
- Ability to apply QMS and EMS in any organization.

BUS-402: Cost and Management Accounting

Credit	Class/week (h)	Total Class (h)
3.0	3.0	45.0

Learning Objectives:

- To know about cost accounting for leather products industry
- To know about Cost Behaviour and Terminology
- To know about Cost Elements
- To know about Cost Accounting system
- To know about Costing Techniques
- To know about Management Accounting

Course Contents:

Cost Accounting:

Introduction: meaning, scope, objective, advantages Financial Accounting vs Cost Accounting, Factors influencing the design of a cost, limitation, characteristics of an ideal Cost Accounting, System, Installation of costing system-steps, difficulties, Measures to overcome the difficulties, Cost unit, Methods of costing types, Development of Cost Accounting.

Cost Behaviour and Terminology: Basic cost behavior patterns, Economic, Accounting and other cost patterns, product Costing Concept Need for Knowledge of cost behavior, Methods of estimating cost relationship.

Cost Elements: Costing for materials, Costing for labour, and costing for Overheads.

Cost Accounting system: Job order costing, Contract Costing and Process Costing.

Costing Techniques: Standard Costing, Costing of by products and joint products, Direct Costing. Costing of leather and leather products, material, labour, power and overhead expenses,

Foreign exchange mechanisms, exchange rates; foreign exchange exposure management – risks, strategies to reduce risk

Budget, types of budgets, budgeting and control in tanneries and leather products industry

Management Accounting:

Introduction-Definition, Difference from Financial Accounting & Cost Accounting, Relationship with Financial Accounting, Uses in planning and control.

Analysis of Cost Behaviour-Variable, Fixed and Mixed. Cost-Volume-Profit Analysis. Analysing cost for Pricing and short-run decision: BEP Analysis, Cost for decision making, Differential cost analysis.

Evaluation Performance: Variance analysis, financial statement, analysis & Interpretation.

Business Economic:

The role of engineers in business and corporation, time value of money, simple and compound interest, types of investment; Types of Economic Analysis: Present, future and annual worth analysis, Cost, Benefit Analysis, Internal Rate of Return Analysis, Incremental Analysis Depreciation: Straight Line Depreciation, Declining Balance Method, MACRS, Sum of years method etc.; After tax cash flow analysis; Inflation and its impact on economic decision; Capital budgeting and rationing; Sensitivity Analysis.

Learning Outcomes: Upon completion of this course students will be able-

- To know about cost accounting for leather products industry
- To know about Cost Behaviour and Terminology
- To know about Cost Elements
- To know about Cost Accounting system
- To know about Costing Techniques
- To know about Management Accounting

Reference Book:

1. Accounting Principles, Kieso and Kimmel.

FE-411: Project

Credit	Class/week (h)	Total Class (h)
3.0		

Project and Seminar:

Each student is required to submit a report on the project assigned to him/her by the institute. Prior to the submission of the project report, each student should present a seminar based on the work done.

FE-412: Comprehensive Viva

Credit	Class/week (h)	Total Class (h)
2.0	-	-

FE-413: Internship

Credit	Class/week (h)	Total Class (h)
3.0	-	-

Each student will have 2 months intensive training in the industry relevant to their study.

Curriculum

M.Sc. Engineering in Footwear Engineering Institute of Leather Engineering and Technology (ILET) UNIVERSITY OF DHAKA

Semester-I

Course No.	Course Title	Credits
FE-501	Modernization of Footwear Manufacturing	3.00
FE-502	Optimization Techniques of Footwear Manufacturing	3.00
RM-503	Research Methodology	3.00

FE-501: Modernization of Footwear Manufacturing (3.0 Credits)

Learning Objectives: The objectives of this course are as follows.

- To introduce students to the additive manufacturing techniques.
- To familiar students with sustainable footwear production practices.
- To equip students with footwear manufacture for cold weather condition.
- To provide an overview of shoe technical file, high performance footwear, structured casual footwear, water-resistant footwear, and platform shoe manufacture.
- To disseminate knowledge about special types of leather made footwear.

Course Contents:

Additive manufacturing (AM) techniques in footwear: Introduction to AM, AM in sports footwear, potential elements of AM, AM techniques: stereolithography (SLA), PolyJet (PJ), selective laser sintering (SLS) and three-dimensional printing (3DP), suitability of different AM techniques, and challenges of AM techniques.

Sustainability in footwear production: Footwear and its role in sustainability, Sustainable production practices from designing to packaging department, Waste accumulation, controlling volatile organic chemicals and CO₂, polymers, water, restricted substances. Implementation of labor law in footwear production, implementation of environment conservation rules in footwear production, reducing costs in footwear manufacture.

Footwear for cold weather conditions: Introduction, The feet in cold environments, Feet and footwear-related injuries in cold environments, Design requirements of footwear for cold environments, Footwear insulation, Footwear evaporative resistance measurements, Moisture management in footwear, Effect of socks on feet insulation, moisture management and comfort.

Compiling a technical file: Purpose, contents and requirements for Compiling a technical file in footwear business.

Maximizing upper permeability in production: Breathability and foot comfort, factors affecting thermoregulation, different climates, different materials to perform in permeability, selection of materials, upper construction.

High performance outdoor footwear: Importance of high performance outdoor footwear, essential features- comfort, thermo-regulation, moisture management and moisture disposal, protection, water resistance, durability etc. Manufacturing process- fit and digital last assessment, upper design, using membranes, bottom construction, assessing moisture management of materials, assessing moisture management of footwear, sole design, wearer expectations, labelling.

Structured casual footwear: Features of structured casual footwear-underfoot cushioning, lightweight flexible solings, soft upper materials, cossetting, moisture disposal, water resistance, durability etc. Manufacturing process- selecting last, upper and bottom design, pattern making, cutting, sewing, lasting, sole attachment, lacing systems and trims.

Water-resistant footwear: Difference between water-proof and water-resistant footwear, customer expectation, construction of water resistant footwear- footwear style/design, material selection, seam performance, sole attaching, finishing etc. **Platform shoe manufacture:** Advantages and disadvantages of platform shoe, importance of keeping stable in platform shoe, controlling of toe spring, positioning the shank, controlling waist strength, design and construction.

Shoe making with suede and nubuck leather: origins and structures of suede and nubuck leather, properties of suede and nubuck leather, Shoe making problems with suede and nubuck leather, sensitive surfaces, protection during shoemaking, other shoemaking operations, wear properties, dye fixatives, surface fixatives, acceptable levels of colour fastness, customer awareness.

Shoe making with non-bovine leather: Types and properties of non-bovine, pig, peccary, capybara, goat, wool sheep, hair sheep, deer, kangaroo, horse, exotic leathers, ostrich and emu, fish, alligators and crocodiles. Manufacturing process of footwear with non-bovine leathers with advantages and disadvantages.

Producing footwear with patent leather: Properties of patent leather, problems that may arise in the use of patent leathers- tear strength problem, orange-peel' effects, heat stress cracking, flexing problem, coating peeling, abrasion damage, surface friction effects. Care taken for producing footwear with patent leather

Shoemaking with oily leathers: Properties of oily finished leather, surface appearance, problems that may arise in the use of oily finish leathers for shoe making and wearing- soiling and cleaning, adhesion may be affected.

Learning Outcomes: Upon completion of this course students will be able-

- To know about sustainable footwear production practices.
- To learn theoretical knowledge about making footwear for cold weather condition.

- To prepare a shoe technical file.
- To gather knowledge about high performance footwear, structured casual footwear, water-resistant footwear, and platform shoe manufacture.
- To know about footwear made of suede, nubuck, patent, non-bovine and oily leather.

Reference Books:

1. ROSSI, W. A. and TENNANT, R. (1984) *Professional Shoe Fitting*, New York, Pedorthic Footwear Association.
2. STELLA, S. (2002) *The Innovation Notebooks for the Footwear Industry*, Last, Italy, AssomacServizisrl.
3. Miller, R.G (1966) *Manual of Shoe Making*, 5th ed. Printing Department, Clarks Ltd. C. & J. Clark Ltd.

FE-502: Optimization Techniques of Footwear Manufacturing (3.0 Credits)

Learning Objectives: Students have to get the idea on

- Advanced knowledge of inventory management,
- Aggregate Planning and Master Scheduling, MRP, MRPII and ERP, Managing Project,
- Decision Modeling, Linear Programming Models, Transportations Modeling, Integer Programming and Dynamic Programming and Network Techniques and Problem-solving tools and improvement strategies.
- Students also will get knowledge on how to implement the advanced tools and techniques of operation research to manage the production in the footwear industry supply chain.

Course Contents:

Advanced Inventory Management: Demand and control system characteristics, inventory concept, inventory cost, inventory modeling, optimization and inventory control, Dynamic EOQ Models, probabilistic models and safety stock, probabilistic demand, probabilistic example, Single-Period Models, Multiperiod Models.

Aggregate Planning and Master Scheduling: Basic Strategies for Meeting Uneven Demand, Techniques for Aggregate Planning, Disaggregating the Aggregate Plan, Master Scheduling, The Master Scheduling Process, Methods for Aggregate Planning: Graphical Methods, Mathematical Approaches, Comparison of Aggregate Planning Methods.

MRP, MRPII and ERP: Basic ideas of inventory MRP, benefits of MRP, inputs to MRP, bill of material (BOM), BOM examples for footwear manufacture, Master Production Schedule (MPS), MPS examples for footwear manufacture, time-phased product structure, MRP structure, determining gross requirements, gross requirements plan for footwear manufacture, gross requirements schedule, MRP management, Lot-sizing techniques, Lot-for-Lot examples, EOQ lot size examples, POQ lot size examples, material requirements

planning II, distribution resource planning (DRP), enterprise resource planning (ERP), SAP's ERP modules.

Decision Modeling: The Decision Process in Operations; Fundamentals of Decision Making; Types of Decision-Making Environments; Decision Making under Uncertainty, Decision Making under Risk, Decision Making under Certainty, Expected Value of Perfect Information (EVPI); Decision Trees; A More Complex Decision Tree, Using Decision Trees in Ethical Decision Making.

Linear Programming Models: Why Use Linear Programming? Requirements of a Linear Programming Problem, Formulating Linear Programming Problems, Graphical Solution to a Linear Programming Problem, Sensitivity Analysis, Solving Minimization Problems, Linear Programming Applications, The Simplex Method of LP.

Transportations Modeling: Transportation Modeling; Developing an Initial Solution: The Northwest-Corner Rule, The Intuitive Lowest-Cost Method, The Stepping-Stone Method; Special Issues in Modeling: Demand Not Equal to Supply, Degeneracy; Using Software to Solve Transportation Problems; Case Studies.

Integer Programming and Dynamic Programming and Network Techniques: Integer programming - Cutting plane algorithm, Branch and bound technique, Zero-one implicit enumeration – Dynamic Programming – Formulation, Various applications using Dynamic Programming. Network Techniques – Shortest Path Model – Minimum Spanning Tree Problem – Maximal flow problem.

Problem solving tools and improvement strategies: Problem solving process, quality control tools, new management tools, quality function deployment, Deming wheel, zero defect concept, benchmarking, six- sigma.

Learning Outcomes: From learning this course the students can understand the advanced knowledge on

- How to manage inventory using advanced Operations Research tools
- How to make aggregate Planning and Master Scheduling for footwear industry
- How to use MRP, MRPII and ERP for materials management
- How to manage new Project related to new products or business
- How decision Modeling, Linear Programming Models, Transportations Modeling, Integer Programming and Dynamic Programming and Network Techniques and Problem-solving tools and improvement strategies help to improve footwear companies' performance and profitability.
- How to implement the advanced tools and techniques of operation research to manage the production in the footwear industry supply chain.

6. Larry P. Ritzman, Lee J. Krajewski, and Manoj K. Malhotra- Operations Management: Processes and Supply Chains
7. Nicholas J. Aquilano and Richard B. Chase- Production and Operations Management
8. Edward S. Pound, Jeffrey H. Bell, and Mark L. Spearman- Factory Physics for Managers: How Leaders Improve Performance in a Post-Lean Six Sigma World
9. Kim Hua Tan and Rupert Matthews- Operations Strategy in Action: A Guide to the Theory and Practice of Implementation

RM-503: Research Methodology (3.0 Credits)

Learning Objectives:

- To identify the overall process of designing a research study from its inception to its report.
- To learn about the methods used for the educational research.
- To familiar with ethical issues in educational research, including those issues that arise in using quantitative and qualitative research.
- To identify a research problem stated in a study.
- To analyze critical problem and finding a suitable solution.
- To improve skill on statistical data analysis by ANOVA and computational system.
- To acquire knowledge on conducting literature review for doing educational and industrial research.
- To enlarge knowledge in generating a research report with appropriate reference.

Course Contents:

Meaning of Research: Definitions of Research, Objectives of Research, Motivation in Research, General Characteristics of Research, Criteria of Good Research, Types of Research

The Research Problem, Scientific Thinking, What is a Research Problem, Selecting the Problem, Sources of the Problem, Defining a Problem, Statement of a Problem, Delimiting a Problem, Evaluation of a Problem

The Review of Literature: Meaning of Review of Literature, Need of Review of Literature, Objectives of Review of Literature, Sources of Literature, The Functions of Literature, How

to Conduct the Review of Literature, Some Hints for the Review of Literature, Precautions in Library Use, Reporting the Review of Literature

The Research Hypotheses: Meaning of Hypothesis, Definitions of Hypothesis, Nature of Hypothesis, Functions of Hypothesis, Importance of Hypothesis, Kinds of Hypothesis, Characteristics of a Good Hypothesis, Variables in a Hypothesis, Formulating a Hypothesis, Testing the Hypothesis

The Research Approach: The Philosophical Background, The Qualitative Approach, The Quantitative Approach, The Mixed-Methods Approach, Criteria for Selecting a Research Approach.

The Research Strategies: What are the Research Strategies? Which Strategy to Choose? Case Studies, Experiments, Ethnography, Phenomenology, Ground Theory (GT), Action Research, Mixed-methods, Longitudinal.

Research Methods and Tools: Methods of data collection, observation, questionnaire, Interview. Data Processing, Collection, Classification, Tabulation, Graphical representation and data analysis.

Report Writing: Research Report, Format of research report, main body of the report, references and appendices, style of writing, typing the report, pagination, tables and figures, bibliography, footnotes, margins, quotations, evaluating the report.

Statistical Methods: Hypothesis testing, significance and correlation. Correlation. Linear models and regressions. Pearson and other correlation coefficients. Multiple regressions. Distribution- Normal, t and chi square test.

Difference among means: F-test: 1 way ANOVA; F-test: 2 ways ANOVA. Computer applications in environmental modeling. Computer-based modeling: Linear, regression, validation and forecasting. Computer-based modeling for population and population studies. Matrices, simultaneous linear equations; tests of hypothesis and significance. Time series analysis - moving averages (3 and 5 unit cycles)

Learning Outcomes: At the end of this course, the students would be able to:

- Formulate research problem
- Carry out research analysis and follow research ethics
- Understand some basic concepts of research and its methodologies
- Prepare a project proposal (to undertake a project)
- Organize and conduct research (advanced project) in a more appropriate manner
- Understand that today's world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity
- Write a research report and thesis

10. Wayne, R. Ott (1995). Environmental Statistics and Data Analysis, CRC Press.

ENV-504: Industrial Hazards and Modern Waste Management (3.0 Credits)

Learning Objectives:

- To learn about the methods used for the treatment of wastewater biologically.
- To make the students understand modeling and design aspects of biological techniques available.
- To provide comprehensive overview of solid, biomedical and hazardous waste management.
- To provide knowledge on solid waste management design aspects.
- To learn about the different methods of solid waste management.

Course Contents:

Industrial Hazard: Hazard, Industrial Hazards, Types, identifying of a hazardous waste, hazardous waste management, treatment technology, disposal of radioactive materials, ground water contamination and remediation. Route of industrial hazard entry into human body-Inhalation, Absorption, Swallowed, Injection, Food chain - Contaminated soil, Vegetables, Crops, Fish and Chicken, Adverse impact of hazard, Occupational cancer.

Solid waste Generation in Leather industry and its Utilization: Generation: Skin collagen waste, Fleshing waste, Wet blue, Trimming, Buffing, Chrome shaving, Chrome split, trimming from crust and finished leather. Utilization: Fleshing- Modified fleshing hydrolysate, Reactive protein (RP), feed ingredients

Chrome shaving: Treatment with enzyme, MgO, Carbonates and other alkalis, Uses as Protein hydrolysate, feed, and fertilizer, Glue and Adhesive, Additives in cosmetic industry.

Waste generation in Footwear and Leather Products Industry: Materials being processed: leather, Natural rubber/poly-isoprene, Reaction Injection Moulded (RIM)

polyurethane (PU), Polyvinyl Chloride (PVC) and blends, Ethylene Vinyl Acetate (EVA) and blends, Styrene Butadiene Rubber (SBR), Thermoplastic Polyurethane (TPU), Thermoplastic Rubber (TR), Leather, textile, cotton, polyesters, nylon. Materials used in assembling technology: Adhesive, solvent, oil.

Solid Waste Management:

Solid waste – sources and engineering classification, characterization, generation and quantification. Transport - collection systems, collection equipment, transfer stations, collection route optimization.

Treatment methods - various methods of refuse processing, recovery, recycle and reuse, composting –aerobic and anaerobic, incineration, pyrolysis and energy recovery,

Disposal methods – Impacts of open dumping, site selection, sanitary land filling – design criteria and design examples, leachate and gas collection systems, and leachate treatment.

Hazardous Waste Management- Introduction, Sources, Classification, Physico-chemical, Chemical and Biological Treatment of hazardous waste, regulations.

Thermal treatment - Incineration and pyrolysis.

Soil contamination and site remediation – bioremediation processes, monitoring of disposal sites.

Removal of Refractory Organic Compounds: Theories on Advanced Oxidation Process viz., Photocatalytic treatment, Membrane Separation, Homogenous catalysis system using hydrogen peroxide, ozone etc. Heterocatalytic systems using metal oxides, activated carbon – Removal of Inorganic Compounds through electro dialysis, reverse osmosis, multiple effect evaporator, ion-exchange

Learning Outcomes:

- After completion of this course the students will be able to
- Explore their knowledge on industrial hazard and waste.
- Understand the methods and means to manage tannery wastes.
- Gain knowledge on advanced wastewater treatment.
- Aware of various treatment option for solid waste management.
- Learn adverse impact of industrial hazard on the environment as well as on human body.
- Evaluate the regulations of industrial wastes and to be able to recognize the environmentally friendly utilization methods.
- Convert tannery solid waste into a valuable product.

EIS-505: Ergonomics and Industrial Safety (3.0 Credits)

Learning Objectives:

- To identify the components needed to provide a safe and healthful work environment through case studies and review of injury statistics provided in the course.
- To identify potential workplace safety and health hazards and determine how to mitigate the hazards through engineering controls, administrative controls and personal protective equipment.
- To conduct basic safety inspections using strategies that they have developed though hazard identification and job hazard analysis.
- To explain the causal relationship between accidents and liability including the no fault workers compensation system and the third-party liability type lawsuit.
- To Identify the requirements of training programs in the workplace under the existing OSHA and State-OSHA Requirements.
- To understand essential elements of an occupational safety and health program and the components of international standard organizations in safety and health.

- To describe basic components of an effective company safety and health program including management commitment, employee involvement, hazard recognition and control and training.

Course Contents:

Ergonomics: Introduction, history of development, goal of ergonomics, man-machine system and its components. Anthropometry in work station design (design of work surfaces and seat), stress and strain, over use, metabolism; *Measure of Physiological Functions:* workload and energy consumption, biomechanics, types of movements of body members, strength and endurance, speed of movements; NIOSH lifting equation, Lifting index, Maximum acceptable weights and forces, Distal upper extremities risk factors, Strain index, RULA, REBA, and Office ergonomics; Visual displays for static information, visual displays of dynamic information, auditory, displays and controls, effect of vibration, radiation, bio hazardous materials, chemical hazards, noise, temperature and illumination on performance.

Industrial Safety: History of the safety movement, Safety and health programs, Accident causes and types of accidents, Types of injuries, Record-keeping, Occupational safety and health performance measurement, Responsibility for occupational safety and health, Organization of the safety and health function, Safety inspections, Occupational safety and health training Occupational safety and health standards, OSHA's role in occupational safety and health, Role of the promotional program and its implementation, Safety committees and safety teams, Accident investigation, The role of insurance and risk management/ loss control in occupational safety and health.

Safety Management: Principle of safety management, Safety policy, Benefit of zero incident safety policy, Importance of incident free working environment, Incident investigation, Root cause analysis, Medical evaluation, Preventive action, Work place safety training, Machineries safety, Standard operating procedures of modern equipment's, Personal protection equipment's (PPE), PPE compliance, Occupational safety training, Emergency drill for worker, Occupational health and safety management in Leather and Footwear industry.

Learning Outcomes: At the end of this course, the student will be able to:

- Identify the components needed to provide a safe and healthful work environment through case studies and review of injury statistics provided in the course.
- Analyze safety and health issues resulting from worker complaints or OSHA violations and suggest potential remedies.
- Identify potential workplace safety and health hazards and determine how to mitigate the hazards through engineering controls, administrative controls and personal protective equipment.
- Demonstrate research skills necessary for mastery of the topic, which will entail a

presentation on a specific industry. Worker compensation claims in the industry selected by the student will be evaluated and injury prevention methods reviewed in the report.

- Conduct basic safety inspections using strategies that they have developed though hazard identification and job hazard analysis.
- Review the principles for developing and implementing a successful occupational health and safety program and evaluation of a work site.

Semester-II

Course No.	Course Title	Credits
FE-506	Sports and Pedorthic Footwear	3.00
FE-510	Thesis	-
Optional Course (Anyone from the following List)		
ENV-507	Environmental Management and Impact Assessment	3.00
ENV-508	Nanotechnology for Leather and Leather Products	3.00
CSIT-509	Industrial Automation	3.00
Total		6.00

FE-506: Sports and Pedorthic Footwear (3.0 Credits)

Learning Objectives: The objectives of this course are as follows.

- To provide an overview of sports footwear manufacturing technologies.
- To equip students with materials and design considerations of sports footwear.
- To disseminate knowledge about different types of foot problems.
- To understand foot and footwear biomechanics.
- To familiar students with diabetic foot problems.
- To provide an overview of diabetic footwear, orthopedic footwear, and geriatric footwear.

Course Contents:

Sports footwear manufacture: Types of sports footwear, essential requirements for sports footwear, product and process development of sports footwear, patterns for sports footwear, manufacturing process of sports footwear, and technologies involved in sports footwear manufacturing.

The shoe in sports: General considerations, materials, lasting techniques, upper designs and cuts, bottoming process, the outer sole, midsole and wedges, other component parts, new component and designs, sports-specific shoes, current use of textiles in sports shoes.

Functional sports footwear: Functional design of sports footwear, functional fit and comfort of sports footwear, shape of the last, fastening systems, sports shoe size system, functional materials and components in sports footwear, properties of materials and components, and injuries related to sports footwear.

Foot problems: Skin lesions- calluses, corns, plantar warts, ingrown nail, etc., arch problems- flat foot, claw foot, arch strains, metatarsalgia, foot fatigue, burning feet, rigid feet, aching in calf, toe problems- hallux valgus, bunion, tailor's bunion, hammer toe, children foot problems- in toeing, out toeing, pronation, crooked toes.

Biomechanics: Basic concept of biomechanics, basic concept of foot barograph, characteristics of the foot, muscles and joints, pressure points and load distribution, foot dynamics, foot motions, gait analysis, phases of gait, primary goals of walking, stance phase, swing phase, running, movements of joints during dynamic phase, muscles work during static and dynamic condition, abnormal gait patterns, body weight distribution (%) over different segments of feet, force platforms, angle of flexion at the joints, electromyography.

Diabetic footwear: Diabetes, types of diabetes, diabetic foot, The relationship between footwear and the vulnerable foot, foot complications due to diabetes, impact of diabetes on foot structure, foot pressure and gait, epidemiology of diabetic foot syndrome, the neuropathic foot, the neuroischaemic foot, prevention, treatment, diabetic footwear, development of diabetic footwear, necessity of diabetic footwear, features of diabetic footwear, design for diabetic footwear, materials selection, construction of diabetic footwear, orthotics, classification of orthotics, application and functions of orthotics, footgear, types,

diabetic socks, physiological mechanism of diabetic footwear, diabetic foot and footwear care, and an algorithm for footwear and foot orthoses options for people with diabetes.

Orthopedic footwear: Introduction, classification, Impact of rheumatoid arthritis on foot structure, foot pressure and gait, orthotic men's and women's sandle with arch support, basic measurements for orthopedic footwear, modular footwear measurements, fitting of modular footwear, anatomical insole, in-socks and sole, design and development of orthopedic footwear, specially designed shoes for plantar facilities, bone structure of the foot and complication due to bone structure, materials selections, constructions, orthotics and insertions, design of foot orthoses, foot orthoses for people with rheumatoid arthritis and diabetes, planter facilities, foot care products, turf toe, supination, pronation, foot odors and prevention.

Geriatric Footwear: The impact of aging and systematic diseases, Introduction to geriatric footwear, Geriatric foot problems: etiological and epidemiological factors, Changes in the foot in relation to age, Complicating foot problems, Psychosocial and psychological considerations, Considerations in shoe design, and Therapeutic footwear.

Learning Outcomes: Upon completion of this course students will be able-

- To learn about different types of sports footwear.
- To gather knowledge on sports footwear design considerations.
- To know about foot and footwear biomechanics.
- To know about diabetic foot problems.
- To know about diabetic footwear, orthopedic footwear, and geriatric footwear.

Reference Books:

1. Footwear and Foot Orthoses by Anita Williams and Chris Nester
2. Therapeutic footwear by Wendy Tyrrell and Gwenda Carter
3. The Science of Footwear by Ravindra S. Goonetilleke

Optional Course (Anyone from the following List)		
ENV-507	Environmental Management and Impact Assessment	3.00
ENV-508	Nanotechnology for Leather and Leather Products	3.00
CSIT-509	Industrial Automation	3.00

ENV-507: Environmental Management and Impact Assessment (3.0 Credits)

Learning Objectives: The course is aimed to:

- Appreciate the purpose and role of EIA in the decision-making process;
- Understand strengths & limitations of environmental management;
- Know procedures
- Understand screening & scoping processes
- Interpret options for evaluating environmental and social impacts;

- Know formats of EIA Report (Environmental Impact Statement, or Environmental Statement);
- Understand the purpose of developing follow-up procedures, and options for designing these procedures

Course Contents:

Environmental Audit: Principles of environmental auditing, cleaner technologies in industrial processes and evaluation of processes. Auditing techniques in preparation of EA, Basic Concept of Disaster- Definition of hazard, vulnerability, risk, disaster, Causative factors of disaster, Classification of disasters.

Clean Development Mechanism: Overview on sustainable development. Greenhouse gasses reduction mechanism. Project cycle for the CDM. CDM for small scale projects. Risks and opportunities for industries. Financing of CDM projects. Case studies.

Hazard Mitigation: Identification of hazard prone belts, hazard zonation and risk assessment; risk reduction in vulnerable areas, developing warning systems, forecasting, emergency preparedness, education and training activities, planning for rescue and relief works.

Natural Hazards: earthquakes, tsunamis, volcanoes, floods, landslides, avalanche, cyclone, drought, fire – causes, perception, mitigation and management.

Man-made hazards: Hazards due to dams and reservoirs, nuclear power plants, industrial hazards, occupational hazards, mitigation measures.

Environmental health hazard and risk assessment: biological, chemical, physical and psychological health hazard; health risk assessment and management.

Environmental Impact Assessment (EIA): Definition, purpose and characteristics of EIA; global evolution of EIA; participants in EIA process, stages of EIA, types of EIA. Environmental inventory. Baseline data on EIA- environmental data, project data and project alternative data. Measurement of impact– physical, social, economic, natural; Public participation in environmental decision making; Framework of Environmental Assessment; Description of environmental setting; environmental impact factors and area consideration. Environmental Impact Statement (EIS) and Environmental Management Plan (EMP).

Environmental Impact Analysis: Impact identification and methods of impact identification- adhoc method, checklist, matrix, network, overlay and index methods; impact prediction and predictive methodologies, impact evaluation (assessment) and impact mitigation.

Basic steps for the impact identification, prediction and assessment of air, water, noise, vegetation and wildlife environment with case studies.

EIA in Bangladesh: An overview of history, current procedures, practices and guidelines. EIA of water resource projects, industries, mining and quarrying, highway construction, tourism developments.

Learning Outcomes: At the end of the course the students will be able to

- Explain the concepts about the Environmental Impact Assessment (EIA).
- Express environment law, aim and concept.
- Explain the necessity of EIA.
- Evaluate the subjects which must be considered in EIA projects.
- Know important plant or animal groups.
- identify these species or have these species identified

ENV-508: Nanotechnology for Leather and Leather Products (3.0 Credits)

Learning Objectives:

- To elucidate emerging needs in nanotechnology environment, health; and safety, and incorporate them into basic education that can be immediately employed in industry.
- To promote interdisciplinary interactions among engineering, engineering technology, science, and industrial management/technology majors.
- To develop knowledge of the fundamental structure of matter, in order to control its behavior at the nanometric scale,
- To use nanometric knowledge to design and develop new products and systems that could have a major bearing on a wide range of areas of special socioeconomic significance in Leather sector.

Course Contents:

Introduction to Nanotechnology: Importance of nanotechnology, history of nano technology, properties of nanomaterials, difference between bulk and nanomaterial, molecular building blocks for nanostructure systems. Influence of Nano structure on mechanical, optical, electronic, magnetic and chemical properties.

Overview of different nanomaterials available, nanoscale, electromagnetic spectrum, particle size, chemistry and physics of nanomaterials, electronic phenomenon in nanostructures, optical absorption in solids, quantum effects.

Nanomaterials Synthesis: “Top-Down” and “Bottom-Up” approaches of nanomaterial (nanoparticles, nanoclusters and quantum dots) synthesis. Top-down techniques: photolithography, particle-beam lithographies (e-beam, FIB, shadow mask evaporation), probe lithographies. Bottom-up techniques: self-assembly, self-assembled monolayers, directed assembly, layer-by-layer assembly. Pattern replication techniques: soft lithography, nanoimprint lithography. Quantum dots, gold, silver, different types of nano-oxides, Al₂O₃, TiO₂, ZnO etc. Carbon nanotubes, preparation properties and applications like field emission displays.

Characterization Techniques Related to Nanoscience and Nanotechnology: Compositional surface analysis; XPS. Microscopies; optical microscopy, fluorescence, TEM, SEM, Probe techniques; scanning tunneling microscopy (STM), atomic force microscopy (AFM), Neutron Scattering and XRD. Spectroscopic Techniques; UV-visible, FT-IR, Raman, NMR, ESR.

Application of Nanomaterials: Molecular motors, energy storage, electronic-nano particles for molecular diagnostics, nano biosensors, nano pharmaceuticals, nanoparticle-based drug delivery, nanostructures for tissue engineering/regenerative medicine etc. Ethical safety and regulatory issues of nanomedicine.

Application of Nanomaterials in leather: Collagen – Skin Matrix – Association of nano materials with collagen matrix at various stages of processing – Pre tanning. Tanning. Post Tanning and Finishing.

Manufacture of Nano based materials for leather manufacture: Syntans, fatliquor, coloring and finishing chemicals.

Handling, Safety and Hazard of Nanomaterials Processing: Safety precautions at lab and manufacturing level; Temperature-Pressure and other physical effects. Effect of nanomaterial exposure on human and living stock, long term and short term effects-Case studies of Titania-Asbestos and Carbon nanoparticle exposure. Effect of Nano particles on air, water and soil; food and food supplements and cosmetics.

Learning Outcomes:

- Determine the nanotechnology and actual working areas and applications.
- Can distinguish between nanomaterials depending on their technological applications.
- Describe and explain Nanotechnology based on their dimensionality.
- Explain the importance of reduction in materials dimensionality, and its relationship with materials properties.
- Describe and discuss Nanotechnology tools.

Reference Books:

1. Nanotechnology: An Introduction by Jeremy Ramsden
2. Introduction to Nanotechnology by Charles P Poole and Frank J Owens
3. Nanotechnology for Dummies: A Fun and Easy Way to Explore the Science of Matter's Smallest Particles by Earl Boysen and Richard Booker

CSIT-509: Industrial Automation (3.0 Credits)

Learning Objectives:

- To provide knowledge and skills useful in identifying the concepts of automated machines and equipment.
- To provide the terms and phrases associated with industrial automation.
- To introduce the importance of automation techniques manufacturing and process Industries.
- To impart the role of PLC in industry automation.
- To expose to various control techniques employed in process automation.
- To develop automation system for manufacturing and process industries.

Course Contents:

Introduction: Basics of Industrial Automation, Principles and strategies of automation, Basic elements of an automated system, Advanced automation functions, Levels of automations, Automated flow lines and transfer mechanisms, Analysis of transfer lines without storage, Automated flow lines with storage buffers.

Boolean Algebra and Logic Circuits: Logic gates: AND, OR, NAND, NOR, NOT, XOR, XNOR, Truth tables, Logic functions, Boolean Laws, Karnaugh maps, State Machines.

Programmable Logic Controller (PLC):- Block diagram of PLC, Programming languages of PLC, Basic instruction sets, Design of alarm and interlocks, Networking of PLC, Overview of safety of PLC with case studies. Process Safety Automation: Levels of process safety through use of PLCs,

Controllers: Control Modes, PID and Digital Controllers, Velocity Control, Adaptive Control, Microprocessor and Microcontrollers

Sensors: Important characteristics, Main industrial sensors (Overview), Classification of sensors and their usage, Description of different kinds of sensors, for example, proximity, magnetic, electronic, inductive, capacitor sensors, etc.

Actuators: Overview of Actuators, usage of Actuators in Robotics, Classification of Actuators (Pneumatic, Hydraulic, Electric), Basics of Pneumatic and Hydraulic Actuation Systems, Mechanical Actuation Systems, Electrical Actuation Systems.

Design of Automated Systems: Steps of an automated System Design, Possible Design Solutions. Case Studies on Application of an automated Systems.

Human-machine-interaction: The overview of Human and Machine Interaction.

Learning Outcomes:

- Student will be able to identify or solve problems in machines, and other technologies.
- Students will have knowledge on how an automated machine works.
- Students will be able to demonstrate competence in maintaining and troubleshooting technology
- Students will be familiar with various automation technologies in manufacturing and process industries.
- Student will understand various automation tools and methods in industry.

Reference Books:

1. Industrial Control Electronics 3rd Edition by Terry L.M. Bartelt.
2. M.P. Groover, “Automation, Production Systems and Computer Integrated Manufacturing”, 5th Edition, Pearson Education, 2009.
3. John W. Webb and Ronald A. Reis, “Programmable Logic Controllers: Principles and Applications”, 5th Edition, Prentice Hall Inc., New Jersey, 2003.
4. Mechatronics: Electronic Control Systems in Mechanical and Electrical Engineering - W. Bolton, Prentice Hall.
